Trademarks

The following trademarks are used in this document:

- Microsoft is a registered trademark of Microsoft Corp.
- Windows 8, 10 and Explorer are trademarks of Microsoft Corp.
- Apple and Mac OS are registered trademarks of Apple Inc.
- Other products may be trademarks or registered trademarks of their respective manufacturers.

Safety Instructions

- Read the installation guide thoroughly before you set up the router.
- The router is a complicated electronic unit that may be repaired only by authorized and qualified personnel. Do not try to open or repair the router yourself.
- Do not place the router in a damp or humid place, e.g. a bathroom.
- The router should be used in a sheltered area, within a temperature range of +5 to +40 Celsius.
- Do not expose the router to direct sunlight or other heat sources. The housing and electronic components may be damaged by direct sunlight or heat sources.
- Do not deploy the cable for LAN connection outdoor to prevent electronic shock hazards.
- Keep the package out of reach of children.
- When you want to dispose of the router, please follow local regulations on conservation of the environment.

Warranty

- We warrant to the original end user (purchaser) that the router will be free from any defects in workmanship or materials for a period of two (2) years from the date of purchase from the dealer. Please keep your purchase receipt in a safe place as it serves as proof of date of purchase. During the warranty period, and upon proof of purchase, should the product have indications of failure due to faulty workmanship and/or materials, we will, at our discretion, repair or replace the defective products or components, without charge for either parts or labor, to whatever extent we deem necessary to restore the product to proper operating condition. Any replacement will consist of a new or re-manufactured functionally equivalent product of equal value, and will be offered solely at our discretion. This warranty will not apply if the product is modified, misused, tampered with, damaged by an act of God, or subjected to abnormal working conditions. The warranty does not cover the bundled or licensed software of other vendors. Defects which do not significantly affect the usability of the product will not be covered by the warranty. We reserve the right to revise the manual and online documentation and to make changes from time to time in the contents hereof without obligation to notify any person of such revision or changes.

Be a Registered Owner

- Web registration is preferred. You can register your Vigor router via <http://www.DrayTek.com>.

Firmware & Tools Updates

- Due to the continuous evolution of DrayTek technology, all routers will be regularly upgraded. Please consult the DrayTek web site for more information on newest firmware, tools and documents.

Part I Installation

Installation

This part will introduce Vigor router and guide to install the device in hardware and software.

I-1 Introduction

This is a generic International version of the user guide. Specification, compatibility and features vary by region. For specific user guides suitable for your region or product, please contact local distributor.

Vigor2135 Series integrates IP layer QoS, NAT session/bandwidth management to help users control works well with large bandwidth.

The entertainment applications running over the home network infrastructure and home-based productivity for SOHO are growing while the broadband bandwidth is increasingly available within affordable budget along with deployment of FTTx. The fiber WAN port of Vigor2135FVn optimizes the throughput performance and flexibility for time-critical console gaming, multi-media streaming and P2P downloading as well as IP telephony. The four Gigabit Ethernet (10/100/1000 LAN ports) auto-sensing ports facilitate home networking with width-intensive applications! Through the combination of Fiber WAN and Gigabit LAN ports to optimize the bandwidth usage, the downstream data and voice packets for Triple play can be flawlessly displayed in endpoint devices, such as HDTV, desktop/laptop or analog/IP phone.

The Vigor2135FVn/Vac/ac series router gives you not only the 802.11n/ac standards for coverage, but also the time scheduling function to save your energy bill plus reducing the carbon footprint. For wireless security, it is also efficient for wireless network management. For instance, its "Wireless LAN isolation" can easily isolate wireless network for friends or guests. Then, the access rights of various wireless clients can be managed by "MAC address control" and deployed "WEP/WPA/WPA2" authentication. No need to remember passwords, you simply press "WPS" button on router and then enable users to securely connect laptop or computers to the router!

The fiber deployment (for Vigor2135FVn) lets businesses and common people have fatter pipe of accessing global network. DrayTek Vigor2135FVn Fiber Router is developed in compliance with the Super-fast broadband architecture and customized for users which already have Fiber to the building (FTTB) or Fiber to the home (FTTH). The bandwidth-consumed multimedia streaming and crystal-clear VoIP functionalities are realized through the Vigor2135FVn's upto-1000Mbps (1 Gigabit) WAN throughput and advanced bandwidth management. You can apply the rules of Session Limit, Bandwidth Limit, Port Rate Control, QoS control list, Ports Priority to different traffic type for better efficiency.

By making the most of your broadband line, the VoIP call will be carried to the destination via Internet. So you can save on the telephone bill. Combining the Internet Telephony service from the Internet Telephony Service Provider (ITSP), the Vigor2135FVn charter VoIP calls to be made to any legacy phone numbers, even including mobile and long distance numbers!

In addition, it supports the worldwide standard TR-069 management and customized triple play while most fiber routers could not have the above distinguished features.

I-1-1 Indicators and Connectors

Before you use the Vigor router, please get acquainted with the LED indicators and connectors first.

I-1-1-1 Vigor2135

LED	Status	Explanation
 (Activity)	Blinking	The router is powered on and running normally.
	Off	The router is powered off.
 WAN	On	Internet connection is ready.
	Blinking	The data is transmitting.
	Off	Internet connection is not ready.
 LAN1/2/3/4	On	The LAN port is connected.
	Blinking	The data is transmitting.
	Off	The LAN port is disconnected.
 USB	On	A USB device is connected and active.
	Blinking	The data is transmitting.

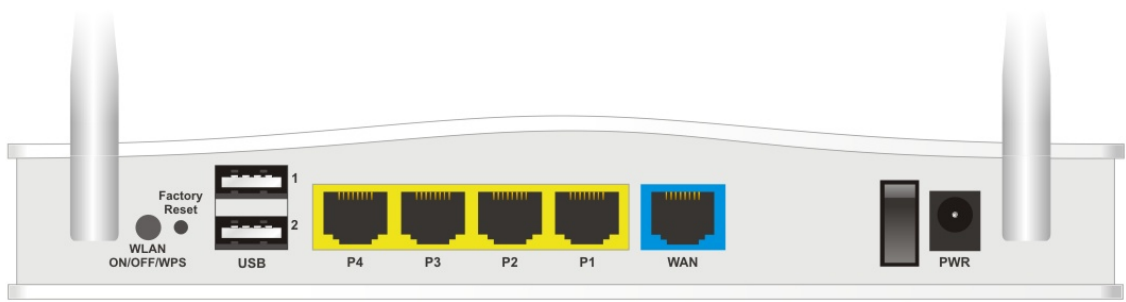

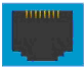

Interface	Description
Factory Reset	Restore the default settings. Usage: Turn on the router (ACT LED is blinking). Press the hole and keep for more than 5 seconds. When you see the ACT LED begins to blink rapidly than usual, release the button. Then the router will restart with the factory default configuration.
USB1~USB2	Connector for a USB device (for USB Modem or printer).
P4~P1	Connectors for local networked devices.
WAN	Connector for remote networked devices (by Ethernet cable).
ON/OFF	Power switch.
PWR	Connector for a power adapter.

I-1-1-2 Vigor2135ac / Vigor2135Vac / Vigor2135FVac

LED	Status	Explanation
 (Activity)	Blinking	The router is powered on and running normally.
	Blinking (quickly)	When both ACT and WLAN LEDs blink quickly, it means the WPS function is enabled and active. The system is waiting for a wireless station of connection.
	Off	The router is powered off.
 WAN	On	Internet connection is ready.
	Blinking	The data is transmitting.
	Off	Internet connection is not ready.
 1, 2 (for "V" model)	On	The phone connected to this port is off-hook.
	Off	The phone connected to this port is on-hook.
 WLAN	Blinking	A phone call comes.
	On	Wireless access point is ready.
	Blinking	Ethernet packets are transmitting over wireless LAN.
	Blinking (quickly)	When both ACT and WLAN LEDs blink quickly, it means the WPS function is enabled and active. The system is waiting for a wireless station of connection.
	Off	The WLAN function is inactive.
 LAN1/2/3/4	On	The LAN port is connected.
	Blinking	The data is transmitting.
	Off	The LAN port is disconnected.
 USB	On	A USB device is connected and active.
	Blinking	The data is transmitting.

Interface	Description
Wireless LAN ON/OFF/WPS	<p>WLAN On - Press the button and release it within 2 seconds. When the wireless function is ready, the green LED will be on.</p> <p>WLAN Off - Press the button and release it within 2 seconds to turn off the WLAN function. When the wireless function is not ready, the LED will be off.</p> <p>WPS - When WPS function is enabled by web user interface, press this button for more than 2 seconds to wait for client's device making network connection through WPS.</p>
Factory Reset	<p>Restore the default settings.</p> <p>Usage: Turn on the router (ACT LED is blinking). Press the hole and keep for more than 5 seconds. When you see the ACT LED begins to blink rapidly than usual, release the button. Then the router will restart with the factory default configuration.</p>
USB1~USB2	Connector for a USB device (for 3G/4G USB Modem or printer).
P4~P1	Connectors for local networked devices.
WAN 	Connector for remote networked devices (by Ethernet cable).
WAN (FVac) 	Connector for fiber connection for accessing the Internet.

Phone2/Phone1 (for "V" model)	Connector of analog phone for VoIP communication.
ON/OFF	Power switch.
PWR	Connector for a power adapter.

I-2 Hardware Installation

I-2-1 Installing Vigor Router

Before starting to configure the router, you have to connect your devices correctly. Here we take Vigor2135ac as an example.

1. Connect the cable Modem/DSL Modem/Media Converter to any WAN port of router with Ethernet cable (RJ-45).
2. Connect one port of 4-port switch to your computer with a RJ-45 cable. This device allows you to connect 4 PCs directly.
3. Connect detachable antennas to the router.
4. Connect one end of the power cord to the power port of this device. Connect the other end to the wall outlet of electricity.
5. Power on the router.
6. Check the ACT and WAN, LAN LEDs to assure network connection.
(For the hardware connection, we take "ac" model as an example.)

I-2-2 Wall-Mounted Installation

Vigor router has keyhole type mounting slots on the underside.

1. A template is provided on the Vigor router packaging box to enable you to space the screws correctly on the wall.
2. Place the template on the wall and drill the holes according to the recommended instruction.
3. Fit screws into the wall using the appropriate type of wall plug.

Info

The recommended drill diameter shall be 6.5mm (1/4").

4. When you finished about procedure, the router has been mounted on the wall firmly.

I-3 Accessing Web Page

1. Make sure your PC connects to the router correctly.

You may either simply set up your computer to get IP dynamically from the router or set up the IP address of the computer to be the same subnet as **the default IP address of Vigor router 192.168.1.1**. For the detailed information, please refer to the later section - Trouble Shooting of the guide.

2. Open a web browser on your PC and type **http://192.168.1.1**. The following window will be open to ask for username and password.

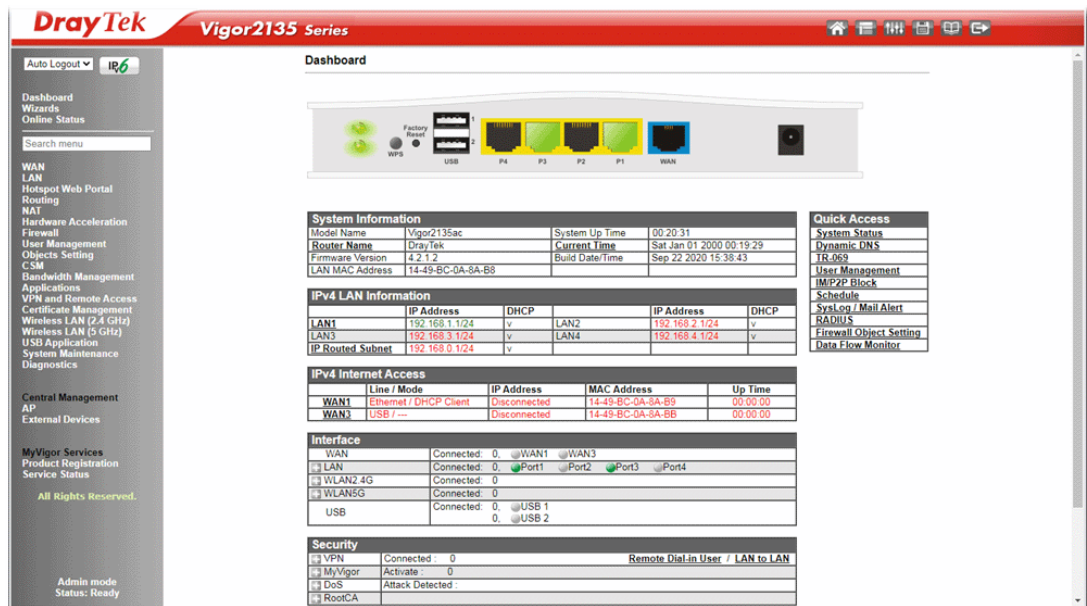

3. Please type "admin/admin" as the Username/Password and click **Login**.

Info

If you fail to access to the web configuration, please go to "Trouble Shooting" for detecting and solving your problem.

4. Now, the Main Screen will appear. Take Vigor2135ac as an example.

Info

The home page will be different slightly in accordance with the type of the router you have.

5. The web page can be logged out according to the chosen condition. The default setting is **Auto Logout**, which means the web configuration system will logout after 5 minutes without any operation. Change the setting for your necessity.

I-4 Changing Password

Please change the password for the original security of the router.

1. Open a web browser on your PC and type **http://192.168.1.1**. A pop-up window will open to ask for username and password.
2. Please type "admin/admin" as Username/Password for accessing into the web user interface with admin mode.
3. Go to **System Maintenance** page and choose **Administrator Password**.

System Maintenance >> Administrator Password Setup

Administrator Password

Old Password	<input type="text" value="Max: 83 characters"/>
New Password	<input type="text" value="Max: 83 characters"/>
Confirm Password	<input type="text" value="Max: 83 characters"/>
Password Strength:	<input type="button" value="Weak"/> <input type="button" value="Medium"/> <input type="button" value="Strong"/>
Strong password requirements: 1. Have at least one upper-case letter and one lower-case letter. 2. Including non-alphanumeric characters is a plus.	
<input checked="" type="checkbox"/> Enable 'admin' account login to Web UI from the Internet	
<input type="checkbox"/> Use only advanced authentication method for Admin "WAN" login	
<input checked="" type="radio"/> Mobile one-Time Passwords(mOTP)	
PIN Code	<input type="text" value="*****"/> Secret <input type="text" value="*****"/>
<input type="radio"/> 2-Step Authentication	
Send Auth code via	
<input type="checkbox"/> SMS Profile	<input type="text" value="1 - ???"/> Recipient Number <input type="text"/>
<input type="checkbox"/> Mail Profile	<input type="text" value="1 - ???"/> Mail Address <input type="text"/>

Note: Password can contain only a-z A-Z 0-9 , : ; . " < > * + = \ | ? @ # ^ ! () \$ % &

4. Enter the login password (the default is "admin") on the field of Old Password. Type New Password and Confirm Password. Then click OK to continue.

Info

The maximum length of the password you can set is 23 characters.

5. Now, the password has been changed. Next time, use the new password to access the Web user interface for this router.

The image shows the login page for a DrayTek Vigor2135 Series router. The page has a dark header with the DrayTek logo and "Vigor2135 Series" in white. Below the header, the word "Login" is displayed in a dark box. There are two input fields: "Username" with the value "admin" and "Password" with masked characters "*****". A "Login" button is positioned below the password field. A security warning message reads: "Security Warning: You are logging in without encryption which is not recommended. To login securely [click here](#)." At the bottom, there is a copyright notice: "Copyright © 2000-2020 DrayTek Corp. All Rights Reserved."

Info

Even the password is changed, the Username for logging onto the web user interface is still "admin".

I-5 Dashboard

The Dashboard provides a convenient way to monitor the current status of the router, including firmware version, system resource usage, LAN and WAN connection uptimes, and interface usage. It is refreshed every 5 seconds with the latest information.

For the Dashboard is the landing page after logging into the web configuration utility, you can also bring up the Dashboard by clicking on the Dashboard on the menu bar.

The Dashboards of other Vigor2135 models are may vary slightly due to differences in features. The figure below shows the Dashboard of the Vigor2135ac.

Dashboard

The System Information section displays general information about the router, such as system uptime, system time, and firmware version.

The IPv4 Internet Access section shows the IPv4 connection status of the WAN ports, including their access modes, IP addresses, MAC addresses and uptimes.

The IPv6 Internet Access section shows the IPv6 connection status of the WAN port that has IPv6 enabled. Unlike IPv4, IPv6 support is limited to one WAN port at a time, so there is always at most one IPv6 WAN connection shown.

The Interface section shows the physical connection status of the WAN, Ethernet, Wi-Fi and USB interfaces.

The Security section shows the states of the security-related features, including VPN, Web Content Filter and App Enforcement.

The System Resource section shows the current CPU and memory usage of the router.

I-5-1 Virtual Panel

At the top of the Dashboard page is the Virtual Panel, a graphical simulation of the front panel of the router.

The WAN and LAN connectors are shaded with various colours to indicate their status at any given point in time.

Dashboard

Port	Color	Description
USB	Black	No USB device is connected.
	Green	A USB device is connected.
LAN P4 ~ P1	Black	LAN port is disconnected.
	Green	LAN port is connected at 1 Gbps.
	Orange	LAN port is connected at 10/100 Mbps.
WAN	Black	WAN2 port is disconnected.
	Green	WAN2 port is connected at 1 Gbps.
	Orange	WAN2 port is connected at 10/100 Mbps.

For detailed information about the LED display, refer to I-1-1 LED Indicators and Connectors.

I-5-2 Name with a Link

A name with a link (e.g., Router Name, Current Time, WAN# and etc.) below means you can click it to open the configuration page for modification.

System Information			
Model Name	Vigor2135ac	System Up Time	00:44:24
Router Name	DrayTek	Current Time	Sat Jan 01 2000 00:43:09
Firmware Version	4.2.1.2_RC1_STD	Build Date/Time	Sep 22 2020 15:38:43
LAN MAC Address	14-49-BC-0A-8A-B8		

IPv4 LAN Information					
	IP Address	DHCP		IP Address	DHCP
LAN1	192.168.1.1/24	v	LAN2	192.168.2.1/24	v

I-5-3 Quick Access for Common Used Menu

All the menu items can be accessed and arranged orderly on the left side of the main page for your request. For your convenience, some of the most-frequently-used items in the Web Configuration Utility are listed under the Quick Access section on the Dashboard.

Look at the right side of the Dashboard. You will find a group of common used functions grouped under Quick Access.

Quick Access
System Status
Dynamic DNS
TR-069
User Management
IM/P2P Block
Schedule
SysLog / Mail Alert
RADIUS
Firewall Object Setting
Data Flow Monitor

Move your mouse cursor on any one of the links and click on it. The corresponding setting page will be open immediately.

Hyperlink	Destination
System Status	System Maintenance >> System Status
Dynamic DNS	Applications >> Dynamic DNS Setup
TR-069	System Maintenance >> TR-069 Setting
User Management	User Management >> User Profile
IM/P2P Block	CSM >> APP Enforcement Profile
Schedule	Applications >> Schedule
SysLog / Mail Alert	System Maintenance >> SysLog / Mail Alert Setup
LDAP	Applications >> Active Directory /LDAP
RADIUS	Applications >> RADIUS/TACACS+
Firewall Object Setting	Objects Setting >> IP Object
Data Flow Monitor	Diagnostics >> Data Flow Monitor

In addition, quick access for VPN security settings such as **Remote Dial-in User** and **LAN to LAN** are located on the bottom of this page. Scroll down the page to find them and use them if required.

Host connected physically to the router via LAN port(s) will be displayed with green circles in the field of Connected.

All of the hosts (including wireless clients) displayed with Host ID, IP Address and MAC address indicates that the traffic would be transmitted through LAN port(s) and then the WAN port. The purpose is to perform the traffic monitor of the host(s).

I-5-4 GUI Map

All the functions the router supports are listed with table clearly in this page. Users can click the function link to access into the setting page of the function for detailed configuration. Click the icon on the top of the main screen to display all the functions.

GUI Map

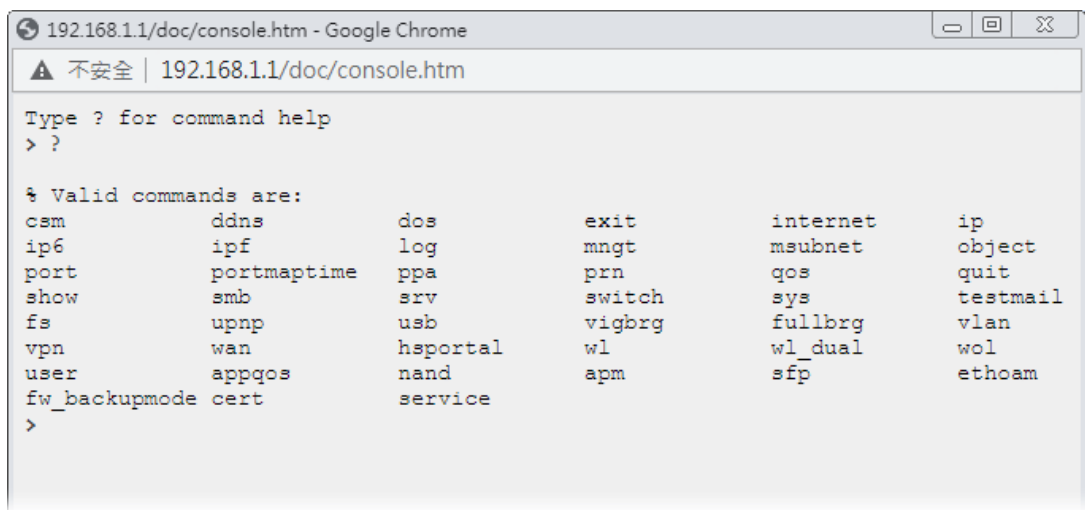

Dashboard		VPN and Remote Access	Remote Access Control
Wizards	Quick Start Wizard		PPP General Setup

I-5-5 Web Console

It is not necessary to use the telnet command via DOS prompt. The changes made by using web console have the same effects as modified through web user interface. The functions/settings modified under Web Console also can be reviewed on the web user interface.

Click the **Web Console** icon on the top of the main screen to open the following screen.

I-5-6 Config Backup

There is one way to store current used settings quickly by clicking the **Config Backup** icon. It allows you to backup current settings as a file. Such configuration file can be restored by using **System Maintenance>>Configuration Backup**.

I-5-7 Logout

Click this icon to exit the web user interface.

I-5-8 Online Status

Online Status
Physical Connection
Virtual WAN

I-5-8-1 Physical Connection

The Physical Connection page displays the status of all the physical network interfaces, including LAN, WAN and DSL.

The information shown for every interface can be in green, indicating the interface is enabled and online; or red, indicating the interface is either disabled or offline.

Physical Connection for IPv4 Protocol

This IPv4 tab displays IPv4 related information of all the LAN and WAN interfaces, plus the DSL connection status.

Online Status

Physical Connection		System Uptime: 0day 1:6:24			
IPv4		IPv6			
LAN Status					
IP Address	TX Packets	RX Packets	Router Primary DNS:	Router Secondary DNS:	
192.168.1.1	72,453	18,034	8.8.8.8	8.8.4.4	
WAN 1 Status >> Renew					
Enable	Line	Name	Mode	Up Time	
Yes	Ethernet		DHCP Client	00:00:00	
IP	GW IP	TX Bytes	TX Rate(bps)	RX Bytes	RX Rate(bps)
---	---	0 (B)	0	0 (B)	0
WAN 3 Status					
Enable	Line	Name	Mode	Up Time	Signal
Yes	USB		---	00:00:00	-
IP	GW IP	TX Bytes	TX Rate(bps)	RX Bytes	RX Rate(bps)
---	---	0 (B)	0	0 (B)	0

Physical Connection for IPv6 Protocol

This IPv6 tab displays IPv6 related information of all the LAN and WAN interfaces.

Online Status

Physical Connection		System Uptime: 0day 1:6:57	
IPv4		IPv6	
LAN Status			
IP Address FE80::1649:BCFF:FE0A:8AB8/64 (Link)			
TX Packets	RX Packets	TX Bytes	RX Bytes
25	96	1,958	9,056
WAN1 IPv6 Status			
Enable	Mode	Up Time	
No	Offline	---	
IP			Gateway IP
---			---
WAN3 IPv6 Status			
Enable	Mode	Up Time	
No	Offline	---	
IP			Gateway IP
---			---

Detailed explanation (for IPv4) is shown below:

Item	Description
LAN Status	<p>Primary DNS-Displays the primary DNS server address for WAN interface.</p> <p>Secondary DNS -Displays the secondary DNS server address for WAN interface.</p> <p>IP Address-Displays the IP address of the LAN interface.</p> <p>TX Packets-Displays the total transmitted packets at the LAN interface.</p> <p>RX Packets-Displays the total received packets at the LAN interface.</p>
WAN# Status	<p>Enable - Yes in red means such interface is available but not enabled. Yes in green means such interface is enabled.</p> <p>Mode - Displays the type of WAN connection (e.g., PPPoE).</p> <p>Up Time - Displays the total uptime of the interface.</p> <p>IP - Displays the IP address of the WAN interface.</p> <p>GW IP - Displays the IP address of the default gateway.</p> <p>TX Packets - Displays the total transmitted packets at the WAN interface.</p> <p>TX Rate - Displays the speed of transmitted octets at the WAN interface.</p> <p>RX Packets - Displays the total number of received packets at the WAN interface.</p> <p>RX Rate - Displays the speed of received octets at the WAN interface.</p>

Detailed explanation (for IPv6) is shown below:

Item	Description
------	-------------

Item	Description
LAN Status	<p>IP Address- Displays the IPv6 address of the LAN interface..</p> <p>TX Packets-Displays the total transmitted packets at the LAN interface.</p> <p>RX Packets-Displays the total received packets at the LAN interface.</p> <p>TX Bytes - Displays the speed of transmitted octets at the LAN interface.</p> <p>RX Bytes - Displays the speed of received octets at the LAN interface.</p>
WAN IPv6 Status	<p>Enable - No in red means such interface is available but not enabled. Yes in green means such interface is enabled. No in red means such interface is not available.</p> <p>Mode - Displays the type of WAN connection (e.g., TSPC).</p> <p>Up Time - Displays the total uptime of the interface.</p> <p>IP - Displays the IP address of the WAN interface.</p> <p>Gateway IP - Displays the IP address of the default gateway.</p>

Info

The words in green mean that the WAN connection of that interface is ready for accessing Internet; the words in red mean that the WAN connection of that interface is not ready for accessing Internet.

I-5-8-2 Virtual WAN

The Virtual WAN screen displays the status of the 3 virtual WAN interfaces.

Virtual WAN are used by TR-069 management, VoIP service and so on.

The field of Application will list the purpose of such WAN connection.

Online Status

Virtual WAN						System Uptime: 1:15:28
WAN 4 Status						
Enable	Line	Name	Mode	Up Time	Application	
No	Ethernet		---	00:00:00	---	
IP	GW IP	TX Packets	TX Rate(Bps)	RX Packets	RX Rate(Bps)	
---	---	0	0	0	0	
WAN 5 Status						
Enable	Line	Name	Mode	Up Time	Application	
No	Ethernet		---	00:00:00	---	
IP	GW IP	TX Packets	TX Rate(Bps)	RX Packets	RX Rate(Bps)	
---	---	0	0	0	0	
WAN 6 Status						
Enable	Line	Name	Mode	Up Time	Application	
No	Ethernet		---	00:00:00	---	
IP	GW IP	TX Packets	TX Rate(Bps)	RX Packets	RX Rate(Bps)	
---	---	0	0	0	0	

Detailed explanation is shown below:

Item	Description
Enable	<p>Yes- Virtual WAN interface is enabled.</p> <p>No- Virtual WAN interface is disabled.</p>

Item	Description
Line	Ethernet- The Ethernet port is used for this virtual WAN.
Name	The IPv6 addresses of the WAN interface. The global address is routable whereas the link local address is for LAN use only.
Mode	Gateway address of the IPv6 WAN connection.
Up Time	Yes: IPv6 support on the WAN interface is enabled. No: IPv6 support on the WAN interface is disabled.
Application	The IPv6 access mode, which can be one of Offline, PPP, TSPC, AICCU, DHCPv6 Client, Static IPv6, 6in4 Static Tunnel, and 6rd.
IP	The IPv6 addresses of the WAN interface. The global address is routable whereas the link local address is for LAN use only.
GW IP	Gateway address of the IPv6 WAN connection.
TX Packets	Total number of IPv6 packets leaving the WAN interface.
TX Rate(Bps)	The speed of transmitted octets.
RX Packets	Total number of IPv6 packets received by the WAN interface.
RX Rate(Bps)	The speed of received octets.

I-6 Quick Start Wizard

The **Quick Start Wizard** allows you to quickly and easily set the router up for Internet access.

Note that only one specific WAN interface can be configured each time the wizard is run. If you have additional WAN interfaces to configure, rerun the wizard and select the appropriate WAN interface. As an alternative, you may use the WAN menu item.

Go to **Wizards>>Quick Start Wizard**. The first screen of **Quick Start Wizard** is entering login password. After entering the password, please click **Next** to proceed.

Quick Start Wizard

Enter login password

Please enter an alpha-numeric string as your **Password**

Old Password	<input type="text" value="Max: 83 characters"/>
New Password	<input type="text" value="Max: 83 characters"/>
Confirm Password	<input type="text" value="Max: 83 characters"/>

Password Strength:

Strong password requirements:
1. Have at least one upper-case letter and one lower-case letter.
2. Including non-alphanumeric characters is a plus.

Hint: If you want to keep the password unchanged, leave the password blank and press "Next" button to skip this process.

On the next screen, you can select a WAN interface to configure. The configuration steps that follow vary slightly depending on the type of Internet connection you have.

If Ethernet interface is used, please choose WAN1; if USB modem is used, please choose WAN3. Then click **Next** for next step.

Quick Start Wizard

WAN Interface

WAN Interface:	<input type="text" value="WAN1"/>
Display Name:	<input type="text"/>
Physical Mode:	Ethernet
Physical Type:	<input type="text" value="Auto negotiation"/>
VLAN Tag insertion	<input type="text" value="Disable"/>

Each WAN interface will bring up different configuration page. Refer to the following for detailed information.

I-6-1 Ethernet Connection on WAN1

WAN2 can be configured for physical mode of Ethernet.

Quick Start Wizard

WAN Interface

WAN Interface:	WAN1 ▾
Display Name:	<input type="text"/>
Physical Mode:	Ethernet
Physical Type:	Auto negotiation ▾
VLAN Tag insertion	Disable ▾

< Back Next > Finish Cancel

Available settings are explained as follows:

Item	Description
Display Name	Optional name that identifies the connection.
Physical Type	Ethernet link parameters. Auto negotiation - Speed and duplex mode are automatically configured by negotiating with the connected device. 10M half duplex - 10 Mbit/s Ethernet half duplex. 10M full duplex - 10 Mbit/s Ethernet full duplex. 100M half duplex - 100 Mbit/s Fast Ethernet full duplex. 100M full duplex - 100 Mbit/s Fast Ethernet half duplex. 1000M full duplex - 1 Gbit/s Gigabit Ethernet full duplex.
VLAN Tag insertion	Enables or disables 802.1q VLAN tagging of WAN traffic. Some Internet connections require the use of VLAN tags. For more information, please contact your Internet Service Provider. Enable - Enables VLAN tagging of all frames leaving the WAN interface. <ul style="list-style-type: none">● Tag value - VLAN identifier, used to tag outbound WAN traffic. Valid tag values range from 0 to 4095.● Priority - 802.1p Class of Service, used to assign the traffic priority. Valid priority values range from 0 (highest) to 7 (lowest). Disable - Disables VLAN tagging.

On the next page as shown below, please select the appropriate Internet access type according to the information from your ISP. For example, you should select PPPoE mode if the ISP provides you PPPoE interface. Then click **Next** for next step.

Ethernet WAN1 - PPPoE

1. Choose **WAN1** as the WAN Interface and choose **Ethernet** as the **Physical Mode**. Click the **Next** button. The following page will be open for you to specify Internet Access Type.

Quick Start Wizard

Connect to Internet

WAN 1
Select one of the following Internet Access types provided by your ISP.

PPPoE
 PPTP
 L2TP
 Static IP
 DHCP

2. Click **PPPoE (Point-to-Point Protocol over Ethernet)** as the Internet Access Type. Then click **Next** to continue.

Quick Start Wizard

PPPoE Client Mode

WAN 1
Enter the user name and password provided by your ISP.

Service Name (Optional)
 Username
 Password
 Confirm Password

Available settings are explained as follows:

Item	Description
Service Name (Optional)	PPP service name tag. Required by some ISPs. Leave blank unless instructed otherwise by your ISP.
Username	Username provided by the ISP for PPPoE/PPPoA authentication. Maximum length is 63 characters.
Password	Password provided by the ISP for PPPoE/PPPoA authentication. Maximum length is 62 characters.
Confirm Password	Re-enter the password for confirmation.
Back	Click it to return to previous setting page.

Item	Description
Next	Click it to get into the next setting page.
Cancel	Click it to give up the quick start wizard.

- Fill in the fields on the page using information provided by your ISP. Then click **Next** for viewing the summary of all the settings you have entered.

Quick Start Wizard

Please confirm your settings:

WAN Interface:	WAN1
Physical Mode:	Ethernet
Physical Type:	Auto negotiation
Internet Access:	PPPoE

Click **Back** to modify changes if necessary. Otherwise, click **Finish** to save the current settings and restart the Vigor router.

- If you are satisfied with what you see, click **Finish** to save your changes. The following message appears indicating that the changes have been successfully saved.

Quick Start Wizard Setup OK!

- Now, you can enjoy surfing on the Internet.

Ethernet WAN1 - PPTP/L2TP

1. Choose **WAN1** as the WAN Interface and choose **Ethernet** as the **Physical Mode**. Click the **Next** button. The following page will be open for you to specify Internet Access Type.

Quick Start Wizard

Connect to Internet

WAN 1
Select one of the following Internet Access types provided by your ISP.

PPPoE
 PPTP
 L2TP
 Static IP
 DHCP

2. Click **PPTP/L2TP (Point-to-Point Tunneling Protocol/ Layer 2 Tunneling Protocol)** as the Internet Access Type. Then click **Next** to continue.

Quick Start Wizard

PPTP Client Mode

WAN 1
Enter the username, password, WAN IP configuration and PPTP server IP provided by your ISP.

Username

Password

Confirm Password

WAN IP Configuration

Obtain an IP address automatically
 Specify an IP address

IP Address

Subnet Mask

Gateway

Primary DNS

Available settings are explained as follows:

Item	Description
Username	User name provided by the ISP. The maximum length of the user name you can set is 63 characters.
Password	Password provided by the ISP. The maximum length of the password you can set is 62 characters.
Confirm Password	Re-enter the password for confirmation.

WAN IP Configuration	<p>Obtain an IP address automatically - The router receives IP configuration information from a DHCP server.</p> <p>Specify an IP address - Use the IP address, Subnet Mask and Gateway values specified below.</p> <ul style="list-style-type: none"> ● IP Address - Static WAN IP address of the router. ● Subnet Mask -Subnet mask of the Internet connection. ● Gateway - IP address of the remote gateway. ● Primary DNS - IP address of the Primary DNS server. ● Second DNS - IP address of the Secondary DNS server.
PPTP Server / L2TP Server	IP address of the PPTP or L2TP server.
Back	Click it to return to previous setting page.
Next	Click it to get into the next setting page.
Cancel	Click it to give up the quick start wizard.

- Fill in the fields on the page using information provided by your ISP. Then click **Next** for viewing the summary of all the settings you have entered.

Quick Start Wizard

Please confirm your settings:

WAN Interface:	WAN1
Physical Mode:	Ethernet
Physical Type:	Auto negotiation
Internet Access:	PPTP
<p>Click Back to modify changes if necessary. Otherwise, click Finish to save the current settings and restart the Vigor router.</p>	

- If you are satisfied with what you see, click **Finish** to save your changes. The following message appears indicating that the changes have been successfully saved.

Quick Start Wizard Setup OK!

- Now, you can enjoy surfing on the Internet.

Ethernet WAN1 - Static IP

1. Choose **WAN1** as the WAN Interface and choose **Ethernet** as the **Physical Mode**. Click the **Next** button. The following page will be open for you to specify Internet Access Type.

Quick Start Wizard

Connect to Internet

WAN 1
Select one of the following Internet Access types provided by your ISP.

PPPoE
 PPTP
 L2TP
 Static IP
 DHCP

< Back Next > Finish Cancel

2. Click **Static IP (Statically assigned IP address)** as the Internet Access type. Simply click **Next** to continue.

Quick Start Wizard

Static IP Client Mode

WAN 1
Enter the Static IP configuration provided by your ISP.

WAN IP 192.168.3.102
Subnet Mask 255.255.255.0
Gateway 192.168.3.1
Primary DNS 8.8.8.8
Secondary DNS 8.8.4.4 (optional)

< Back Next > Finish Cancel

Available settings are explained as follows:

Item	Description
WAN IP	Static WAN IP address of the router.
Subnet Mask	Subnet mask of the Internet connection.
Gateway	IP address of the remote gateway.
Primary DNS	IP address of the Primary DNS server.
Secondary DNS	IP address of the Secondary DNS server.
Back	Click it to return to previous setting page.

Next	Click it to get into the next setting page.
Cancel	Click it to give up the quick start wizard.

- Fill in the fields on the page using information provided by your ISP. Then click **Next** for viewing the summary of all the settings you have entered.

Quick Start Wizard

Please confirm your settings:

WAN Interface: WAN1
Physical Mode: Ethernet
Physical Type: Auto negotiation
Internet Access: Static IP

Click **Back** to modify changes if necessary. Otherwise, click **Finish** to save the current settings and restart the Vigor router.

- If you are satisfied with what you see, click **Finish** to save your changes. The following message appears indicating that the changes have been successfully saved.

Click **Back** to modify changes if necessary. Otherwise, click **Finish** to save the current settings and restart the Vigor router.

4. If you are satisfied with what you see, click **Finish** to save your changes. The following message appears indicating that the changes have been successfully saved.

Quick Start Wizard Setup OK!

5. Now, you can enjoy surfing on the Internet.

I-6-3 USB Connection on WAN3

If you will be using a USB modem to connect to the Internet, you will first need to connect the modem to one of the USB ports before proceeding with the following steps.

1. Choose **WAN3** as WAN Interface.

Quick Start Wizard

WAN Interface

WAN Interface: ▾

Display Name:

Physical Mode: USB

Available settings are explained as follows:

Item	Description
Display Name	Optional name that identifies the connection.

2. Then, click **Next** for getting the following page.

Quick Start Wizard

Connect to Internet

WAN 3

Internet Access : ▾

3G/4G USB Modem(PPP mode)

SIM PIN code

Modem Initial String
(Default:AT&FE0V1X1&D2&C1S0=0)

APN Name

Available settings are explained as follows:

Item	Description
Internet Access	3G/4G USB Modem(PPP mode) - Point-to-Point Protocol is used to establish a connection. 4G USB Modem(DHCP mode) - Dynamic Host Configuration

	Protocol is used to establish a connection.
3G/4G USB Modem (PPP mode)	<p>SIM Pin code - PIN code of the SIM card in the modem. The maximum length of the PIN is 15 characters.</p> <p>Modem Initial String - String to be sent to the modem during initialization. The default value should suffice in most cases. If you need assistance with setting this value, please contact your ISP or carrier. The maximum length of the string is 47 characters.</p> <p>APN Name - Access Point Name to be used for the connection. Please contact your ISP or carrier for the appropriate value. Enter the name and click Apply.</p>
3G/4G USB Modem (DHCP mode)	<p>SIM Pin code - PIN code of the SIM card in the modem. The maximum length of the PIN is 15 characters.</p> <p>Network Mode - Force Vigor router to connect Internet with the mode specified here. If you choose 4G/3G/2G as network mode, the router will choose a suitable one according to the actual wireless signal automatically.</p> <p>APN Name - Access Point Name to be used for the connection. Please contact your ISP or carrier for the appropriate value. Enter the name and click Apply.</p>
Back	Click it to return to previous setting page.
Next	Click it to get into the next setting page.
Cancel	Click it to give up the quick start wizard.

- Fill in the fields on the page using information provided by your ISP. Then click **Next** for viewing the summary of all the settings you have entered.

Quick Start Wizard

Please confirm your settings:

WAN Interface:	WAN3
Physical Mode:	USB
Internet Access:	PPP
<p>Click Back to modify changes if necessary. Otherwise, click Finish to save the current settings and restart the Vigor router.</p>	

- If you are satisfied with what you see, click **Finish** to save your changes. The following message appears indicating that the changes have been successfully saved.

Quick Start Wizard Setup OK!

- Now, you can enjoy surfing on the Internet.

I-7 Service Activation Wizard

The Service Activation Wizard guides you through the activation of the Web Content Filter (WCF) and Application Enforcement (APPE) free trial subscriptions. For detailed information on the WCF and APPE services, please see the sections Web Content Filter Profile and APP Enforcement Profile.

Note: You must log in as the administrator (admin mode) to use the Service Activation Wizard.

1. Open Wizards>>Service Activation Wizard.

2. The screen of Service Activation Wizard will be shown as follows. You can activate the Web content filter services and/or APPE enforcement service and / or DDNS service at the same time or individually. When you finish the selection, please click Next.

Service Activation Wizard

Select the service type that you want to activate

Activation Date : 2018-04-23

Web Content Filter(WCF) Service :

BPjM [License Agreement](#)
This is a web content filter that is provided by the German government. It is a free service without any guarantee and will expire one year after activation. You may re-activate the service after expiry.

Cyren 30-Days Free Trial [License Agreement](#)
This is a worldwide web content filter service. The free trail license can only be used once. At the end of the free trail period you may purchase the official one-year Cyren Web Content Filter from an authorized DrayTek reseller.

APP Enforcement(APPE) Service :

DT-APPE [License Agreement](#)
Upgrade APPE Signature automatically.

Dynamic DNS(DDNS) Service :

DT-DDNS [License Agreement](#)
This is a Dynamic Domain Name Service that is provided by DrayTek company. It is a free service will expire 1 year after activation.
You may re-activate the service after expiry.
Domain Name : .draydns.com

I have read and accept the above Agreement. (Please check this box).

Info

- BPjM is web content filter (WCF) for German Speaking users. It is ideal for your family to provide more Internet security for youngsters.
- Cryan 30-day trial is WCF which offers 30-day trial period.

- DT-APPE, developed by DrayTek, offers a mechanism to upgrade APPE signature automatically.
- DT-DDNS, developed by DrayTek, offers one year free charge service of dynamic DNS service for internal use.

3. A confirmation page detailing your selection will be displayed. Please click **Activate**.

Service Activation Wizard

Please confirm your settings

Service Type : Trial version
 Service Activated : Web Content Filter (Cyren / Commtouch)
 APP Enforcement (DT-APPE)
 Dynamic DNS (2018042313200201.drayddns.com)

Please click **Back** to re-select service type you to activate.

< Back **Activate** Cancel

Info

The service will be activated and applied as the default rule configured in Firewall>>General Setup.

4. Now, the web page will display the service that you have activated according to your selection(s).

Service Activation Wizard

Please confirm your settings

Service Type : Trial version
 Service Activated : Web Content Filter (Cyren / Commtouch)
 APP Enforcement (DT-APPE)
 Dynamic DNS (2018042313200201.drayddns.com)

Please click **Back** to re-select service type you to activate.

< Back Activate Cancel

I-8 Registering Vigor Router

You have finished the configuration of Quick Start Wizard and you can surf the Internet at any time. Now it is the time to register your Vigor router to MyVigor website for getting more service. Please follow the steps below to finish the router registration.

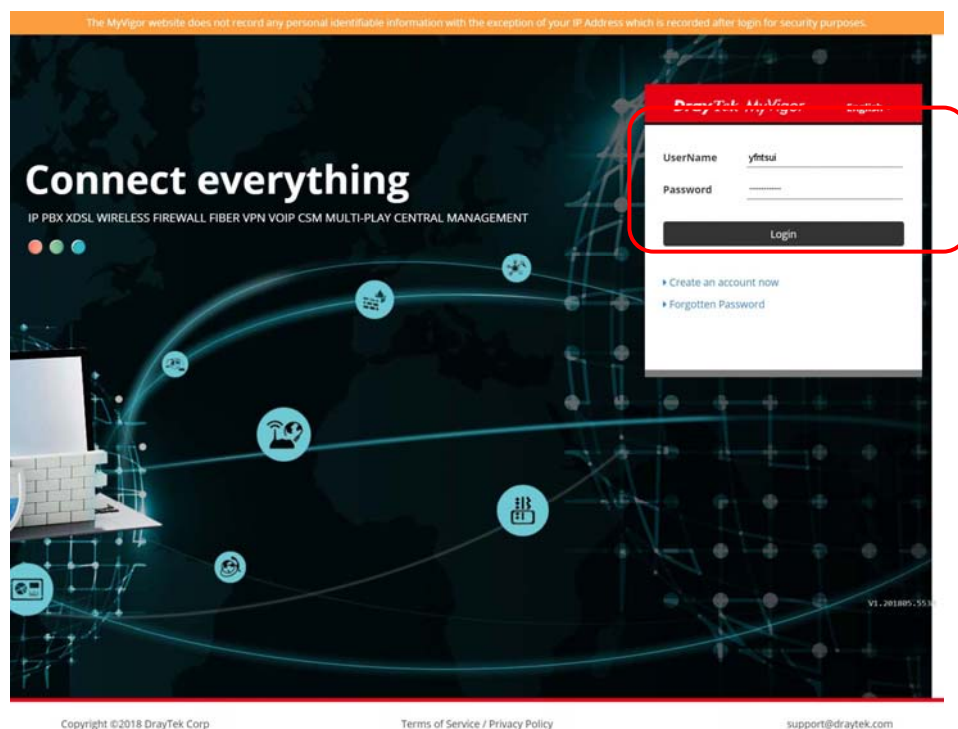

- 1 Please login the web configuration interface of Vigor router by typing "admin/admin" as User Name / Password.

- 2 Click Support Area>>Production Registration from the home page.

- 3 A Login page will be shown on the screen. Please Enter the account and password that you created previously. And click Login.

Info

If you haven't an accessing account, please refer to section Creating an Account for MyVigor to create your own one. Please read the articles on the Agreement regarding user rights carefully while creating a user account.

- The following page will be displayed after you logging in MyVigor. Type a nickname for the router, then click **Add**.

DrayTek MyVigor

My Information - My Products

Registration Devices

Nickname :

Registration Date : 10-12-2020

Serial number : 2020101210301001

Part II Connectivity

WAN

It means wide area network. Public IP will be used in WAN.

LAN

It means local area network. Private IP will be used in LAN. Local Area Network (LAN) is a group of subnets regulated and ruled by router. The design of network structure is related to what type of public IP addresses coming from your ISP.

NAT

When the data flow passing through, the Network Address Translation (NAT) function of the router will dedicate to translate public/private addresses, and the packets will be delivered to the correct host PC in the local area network.

Applications

DNS, LAN DNS, IGMP, LDAP, UpnP, IGMP, WOL, RADIUS, SMS, Bonjour

Routing

Static Route, Load-Balance/Route Policy

II-1 WAN

It allows users to access Internet.

Basics of Internet Protocol (IP) Network

IP means Internet Protocol. Every device in an IP-based Network including routers, print server, and host PCs, needs an IP address to identify its location on the network. To avoid address conflicts, IP addresses are publicly registered with the Network Information Centre (NIC). Having a unique IP address is mandatory for those devices participated in the public network but not in the private TCP/IP local area networks (LANs), such as host PCs under the management of a router since they do not need to be accessed by the public. Hence, the NIC has reserved certain addresses that will never be registered publicly. These are known as *private* IP addresses, and are listed in the following ranges:

From 10.0.0.0 to 10.255.255.255
From 172.16.0.0 to 172.31.255.255
From 192.168.0.0 to 192.168.255.255

What are Public IP Address and Private IP Address

As the router plays a role to manage and further protect its LAN, it interconnects groups of host PCs. Each of them has a private IP address assigned by the built-in DHCP server of the Vigor router. The router itself will also use the default **private IP** address: 192.168.1.1 to communicate with the local hosts. Meanwhile, Vigor router will communicate with other network devices through a **public IP** address. When the data flow passing through, the Network Address Translation (NAT) function of the router will dedicate to translate public/private addresses, and the packets will be delivered to the correct host PC in the local area network. Thus, all the host PCs can share a common Internet connection.

Get Your Public IP Address from ISP

In ADSL deployment, the PPP (Point to Point)-style authentication and authorization is required for bridging customer premises equipment (CPE). Point to Point Protocol over Ethernet (PPPoE) connects a network of hosts via an access device to a remote access concentrator or aggregation concentrator. This implementation provides users with significant ease of use. Meanwhile it provides access control, billing, and type of service according to user requirement.

When a router begins to connect to your ISP, a serial of discovery process will occur to ask for a connection. Then a session will be created. Your user ID and password is authenticated via **PAP** or **CHAP** with **RADIUS** authentication system. And your IP address, DNS server, and other related information will usually be assigned by your ISP.

Network Connection by 3G/4G USB Modem

For 3G/4G mobile communication through Access Point is popular more and more, Vigor2135 adds the function of 3G/4G network connection for such purpose. By connecting 3G/4G USB Modem to the USB port of Vigor2135, it can support LTE/HSDPA/UMTS/EDGE/GPRS/GSM and the future 3G/4G standard (HSUPA, etc). Vigor2135n with 3G/4G USB Modem allows you to receive 3G/4G signals at any place such as your car or certain location holding outdoor activity and share the bandwidth for using by more people. Users can use LAN ports on the router to access Internet. Also, they can access Internet via 802.11(a/b/g/n/ac) wireless standard, and enjoy the powerful firewall, bandwidth management, and VPN features of Vigor2135n series.

After connecting into the router, 3G/4G USB Modem will be regarded as the WAN3/WAN4 port. However, the original WAN1 and WAN2 still can be used and Load-Balance can be done in the router. Besides, 3G/4G USB Modem in WAN3/WAN4 also can be used as backup device. Therefore, when WAN1 and WAN2 are not available, the router will use 3.5G for supporting automatically. The supported 3G/4G USB Modem will be listed on DrayTek web site. Please visit www.draytek.com for more detailed information.

Web User Interface

II-1-1 General Setup

This section will introduce some general settings of Internet and explain the connection modes for WAN1 and WAN3 in details.

This router supports multiple-WAN function. It allows users to access Internet and combine the bandwidth of the multiple WANs to speed up the transmission through the network. Each WAN port can connect to different ISPs, even if the ISPs use different technology to provide telecommunication service (such as DSL, Cable modem, etc.). If any connection problem occurred on one of the ISP connections, all the traffic will be guided and switched to the normal communication port for proper operation. Please configure WAN1 and WAN3 settings.

This webpage allows you to set general setup for WAN1 and WAN3 respectively.

WAN >> General Setup

Index	Enable	Physical Mode/Type	Active Mode
WAN1	<input checked="" type="checkbox"/>	Ethernet/Auto negotiation	Always On
WAN3	<input checked="" type="checkbox"/>	USB/-	Failover

Note:

When WAN2 is enabled, LAN P4 port will be used as WAN2.

OK

Cancel

Available settings are explained as follows:

Item	Description
Index	Click on the WAN# link to bring up its settings page. WAN1: Ethernet WAN interface. WAN3: USB modem connected.
Enable	Select to enable WAN interface.
Physical Mode / Type	Display the physical mode and physical type of such WAN interface.
Active Mode	Display whether such WAN interface is Active device or backup device. Always On - WAN is always enabled. Failover - Display the backup WAN interface for this WAN when it is disabled.

After finished the above settings, click OK to save the settings.

II-1-1-1 WAN1 (Ethernet)

WAN1 can be configured for physical mode of Ethernet.

WAN >> General Setup

WAN 1

Enable:	Yes ▾	
Display Name:	<input type="text"/>	
Physical Mode:	Ethernet	
Physical Type:	10M half duplex ▾	
Active Mode:	Always On ▾	
VLAN Tag insertion	Customer	Service
	Disable ▾	Disable ▾
	Tag value	Tag value
	Priority	Priority
	<input type="text"/>	<input type="text"/>
	(0~4095)	(0~7)
	<input type="text"/>	<input type="text"/>
	(0~4095)	(0~7)

Available settings are explained as follows:

Item	Description
Enable	Yes - WAN is enabled. No - WAN is disabled.
Display Name	Optional name to identify the WAN. Enter the description for the interface.
Physical Mode	Physical connection used for this WAN. Ethernet - WAN connection to be established through the WAN1 Ethernet port.
Physical Type	(Available only when Physical Mode is set to Ethernet) Auto negotiation - Ethernet connection speed is automatically negotiation between the router and the ISP's equipment. 10M half duplex -Ethernet speed is manually set to 10 Mbit/s, half duplex. 10M full duplex - Ethernet speed is manually set to 10 Mbit/s, full duplex. 100M half duplex - Ethernet speed is manually set to 100 Mbit/s, half duplex. 100M full duplex - Ethernet speed is manually set to 100 Mbit/s, full duplex. 1000M full duplex - Ethernet speed is manually set to 1 Gbit/s, full duplex.
VLAN Tag insertion	Determines whether 802.1ad VLAN tags will be added to outbound WAN traffic in ADSL/VDSL 2 mode. Check with your ISP to determine if this is required, and if so, the proper tag and priority values to be used. Enabled - Tagging enabled. Disabled - Tagging disabled. Tag value - Value must be between 1 and 4095. Priority - Priority code point (PCP). Value must be between 0 and 7.

After finished the above settings, click OK to save the settings.

II-1-1-2 WAN3 (USB)

To use 3G/4G network connection through 3G/4G USB Modem, please configure WAN3 interface.

WAN >> General Setup

WAN 3

Enable:	Yes ▾
Display Name:	<input type="text"/>
Physical Mode:	USB
Active Mode:	Failover ▾

OK Cancel

Available settings are explained as follows:

Item	Description
Enable	Yes - WAN is enabled. No - WAN is disabled.
Display Name	Optional name to identify the WAN. Enter the description for the interface.
Physical Mode	Physical connection used for this WAN. USB - WAN connection to be established through USB.
Active Mode	Always On - WAN is always enabled. Failover - WAN is enabled only when other WAN ports specified in Backup have lost connection.

After finished the above settings, click OK to save the settings.

II-1-2 Internet Access

For the router supports multi-WAN function, the users can set different WAN settings (for WAN1, WAN3) for Internet Access. Due to different Physical Mode for WAN interface, the Access Mode for these connections also varies. Refer to the following figures for examples.

WAN >> Internet Access

Internet Access

Index	Display Name	Physical Mode	Access Mode		
WAN1		Ethernet	Static or Dynamic IP	Details Page	IPv6
WAN3		USB	None	Details Page	IPv6

DHCP Client Option

Available settings are explained as follows:

Item	Description
Index	The WAN interface.
Display Name	Reflects the Display Name configured for the WAN in the General Setup section.
Physical Mode	Reflects the Physical Mode configured for the WAN in the General Setup section.
Access Mode	Internet access mode of the WAN. The details page of that mode will be popped up. If not, click Details Page for accessing the page to configure the settings.
Details Page	Click this button to bring up the Internet Access settings page.
IPv6	Click this button to bring up the IPv6 settings page. When IPv6 is enabled, the button label is shown in green:  - IPv6 is enabled.  - IPv6 is disabled.
DHCP Client Option	Click this button to configure additional DHCP client options. DHCP packets can be processed by adding option number and data information when such function is enabled and configured.

WAN >> Internet Access

DHCP Client Options Status

IPv4 IPv6 Set to Factory Default

Enable	Interface	Option	Type	Data
Options List				

Enable:

Interface: All WAN1 WAN3 WAN4 WAN5 WAN6

Option Number:

Data Type: ASCII Character (EX: Option 18, Data: /path)
 Hexadecimal Digit (EX: Option 18, Data: 2F0617468)
 Address List (EX: Option 44, Data: 172.16.2.10,172.16.2.20...)

Data:

Add Update Delete Reset

Note:

1. Option 12 is reserved. You cannot configure it here, but you can configure it in "Router Name" field of "WAN >> Internet Access >> Details Page".
2. Option 55 is reserved and configured with value 1, 3, 6, 15 and 212, also 33 and 121 for some models.
3. Configuring option 61 here will override the setting in "WAN >> Internet Access" page's DHCP Client Identifier field.

OK

Options List - Shows all the DHCP options that have been configured in the system.

Enable/Disable - If selected, DHCP option entry is enabled. If unselected, DHCP option entry is disabled. Each DHCP option is composed by an option number with data. For example,

Option number: 100

Data: abcd

When it is enabled, the specified values for DHCP option will be seen in DHCP reply packets.

Interface - WAN interface(s) to which this entry is applicable. WAN1 through WAN4 are physical WANs that can be set up in the WAN>>General Setup and WAN>>Internet Access sections. WAN7 through WAN9 are virtual WANs that can be set up in the WAN>>Multi-PVC/VLAN section.

Option Number - Enter a number for this function.

Data Type - Choose the type (ASCII or Hex or Address List) for the data to be stored. Type of data in the Data field:

- ASCII Character: A text string. Example: /path.
- Hexadecimal Digit: A hexadecimal string. Valid characters are from 0 to 9 and from a to f. Example: 2F0617468.
- Address List: One or more IPv4 addresses, delimited by commas.

Data - Data of this DHCP option. Enter the content of the data to be processed by the function of DHCP option.

Info

If you choose to configure option 61 here, the detailed settings in WAN>>Interface Access will be overwritten.

II-1-2-1 WAN1 Details Page (PPPoE, Physical Mode: Ethernet)

To choose PPPoE as the accessing protocol of the Internet, please select PPPoE from the WAN>>Internet Access >>WAN1 page. The following web page will be shown.

WAN >> Internet Access

WAN 1

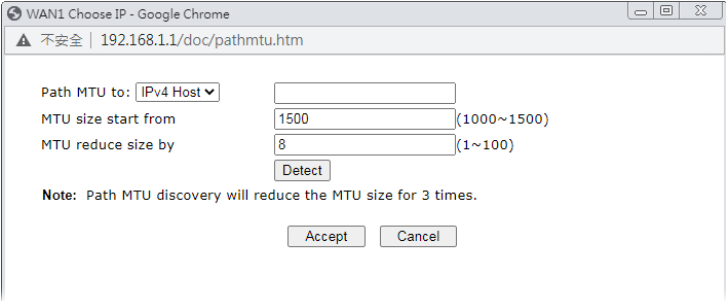

PPPoE	Static or Dynamic IP	PPTP/L2TP	IPv6
<input type="radio"/> Enable <input checked="" type="radio"/> Disable			
ISP Access Setup Username <input type="text" value="Max: 63 characters"/> Password <input type="text" value="Max: 62 characters"/> More Options <input type="button" value="+"/>		PPP/MP Setup PPP Authentication <input type="text" value="PAP/CHAP/MS-CHAP/MS-CHAPv2"/> Idle Timeout <input type="text" value="-1"/> second(s) IP Assignment (IPCP) <input type="radio"/> Static <input checked="" type="radio"/> Dynamic Fixed IP Address <input type="text"/> <input type="button" value="WAN IP Alias"/>	
PPPoE Pass-through¹ <input type="checkbox"/> For Wired LAN <input type="checkbox"/> For Wireless LAN		Dial-Out Schedule Index(1-15) in Schedule Setup : => <input type="text" value="None"/> => <input type="text" value="None"/> => <input type="text" value="None"/> => <input type="text" value="None"/>	
WAN Connection Detection Mode <input type="text" value="PPP Detect"/>		TTL <input checked="" type="checkbox"/> Change the TTL value <input checked="" type="radio"/> Default MAC Address <input type="radio"/> Use the following MAC Address <input type="text" value="14:49:BC:0A:8A:BE"/>	
MTU <input type="text" value="1500"/> (Max:1500) <input type="button" value="Path MTU Discovery"/>			

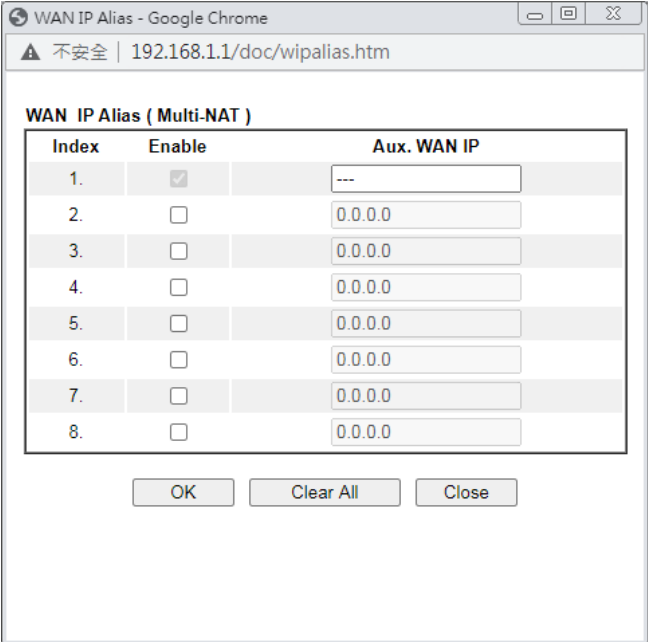

Note:

VPN feature may be affected when the value of MTU is changed, please also check your value of VPN mss by using "VPN mss set" command.
 We recommend to put the same decreased value on VPN mss. For example, reducing the MTU from 1500 -> 1400, then it will need to reduce 100 from mss value.

Available settings are explained as follows:

Item	Description
Enable/Disable	Enable or disable PPPoE access mode.
ISP Access Setup	Enter your allocated username, password and authentication parameters according to the information provided by your ISP. Username - Username provided by the ISP for PPPoE authentication. Password - Password provided by the ISP for PPPoE authentication. More Options - Click to display more options. <ul style="list-style-type: none"> • Service Name (Optional) - Sets the PPP service name tag. Required by some ISPs. Leave blank unless instructed otherwise by your ISP.
PPPoE Pass-through	The router offers PPPoE dial-up connection. Besides, you also can establish the PPPoE connection directly from local clients to your ISP via the Vigor router. For Wired LAN - If you check this box, PCs on the same network can use another set of PPPoE session (different with the Host PC) to access into Internet. For Wireless LAN - It is available for <i>n</i> model. If you check

	<p>this box, PCs on the same wireless network can use another set of PPPoE session (different with the Host PC) to access into Internet.</p>
<p>WAN Connection Detection</p>	<p>Configures how the WAN connection is monitored.</p> <p>Mode - Choose ARP Detect or Ping Detect for the system to execute for WAN detection.</p> <ul style="list-style-type: none"> ● ARP Detect - The router broadcasts an ARP request every 5 seconds. If no response is received within 30 seconds, the WAN connection is deemed to have failed. ● Ping Detect - The router sends an ICMP (Internet Control Message Protocol) echo request every second to the host, whose address is specified in the Ping IP field, to verify the WAN connection. If the remote host does not respond within 30 seconds, the WAN connection is deemed to have failed. <p>If you choose Ping Detect as the detection mode, you have to enter required settings for the following items.</p> <ul style="list-style-type: none"> ● Primary/Secondary Ping IP - Enter Primary or Secondary IP address in this field for pinging. ● Ping Gateway IP - Enable this setting to use current WAN gateway IP address for pinging. With the IP address(es) pinging, Vigor router can check if the WAN connection is on or off. ● TTL (Time to Live) - Time To Live, the maximum allowed number of hops to the ping destination. Valid values range from 1 to 255. ● Ping Interval - Enter the interval for the system to execute the PING operation. ● Ping Retry - Enter the number of times that the system is allowed to execute the PING operation before WAN disconnection is judged.
<p>MTU</p>	<p>Maximum Transmission Unit, the size of the largest packet, in bytes, that can be transmitted to the WAN. The maximum value is 1500. For PPPoE connections, there is always an 8-byte overhead, so the maximum valid MTU value for PPPoE is 1492.</p> <p>Path MTU Discovery - Use this feature to determine the optimal MTU size for the WAN.</p> <p>Click Detect to open the following dialog.</p>  <ul style="list-style-type: none"> ● Path MTU to - Select Host / IP, for an IPv4 address or Host / IPv6, for an IPv6 address, and then enter the IP address in the textbox. ● MTU size start from - Determine the starting point value of the packet. ● MTU reduce size by - Number of octets by which to

	<p>decrease the 1500-byte MTU. Start with a 0 value for the reduce size and click the Detect button. If the message Fail is returned, increase the MTU reduce size and try again. Repeat until you see the message Success, indicating that the optimal MTU size has been reached.</p> <ul style="list-style-type: none"> ● Detect - Click it to detect a suitable MTU value. ● Accept - After clicking it, the detected value will be displayed in the field of MTU.
<p>PPP/MP Setup</p>	<p>PPP Authentication - The protocol used for PPP authentication.</p> <ul style="list-style-type: none"> ● PAP only - Only PAP (Password Authentication Protocol) is used. ● PAP/CHAP/MS-CHAP/MS-VHAPv2 - Both PAP and CHAP (Challenge-Handshake Authentication Protocol) can be used for PPP authentication. Router negotiates with the PPTP or L2TP server to determine which protocol to use. <p>Idle Timeout - Set the timeout for breaking down the Internet after passing through the time without any action.</p> <p>IP Assignment (IPCP) - Configure the router according to how your ISP allocates WAN IP address(es) to you.</p> <p>Fixed IP Address - WAN IP address assigned by the ISP.</p> <p>WAN IP Alias - Click to enter multiple WAN IP addresses assigned by your ISP.</p> 
<p>Dial-Out Schedule Setup</p>	<p>Specify up to 4 time schedule entries to enable or disable the WAN. All the schedules can be set previously in Applications >> Schedule web page and you can use the number that you have set in that web page.</p>
<p>TTL</p>	<p>Change the TTL value - Enable or disable the TTL (Time to Live) for a packet transmitted through Vigor router.</p> <ul style="list-style-type: none"> ● If enabled - TTL value will be reduced (-1) when it pass through Vigor router. It will cause the client, accessing Internet through Vigor router, be blocked by certain ISP when TTL value becomes "0".

- If disabled - TTL value will not be reduced. Then, when a packet passes through Vigor router, it will not be cancelled. That is, the client who sends out the packet will not be blocked by ISP.

Default MAC Address - Use the default MAC address for the WAN Ethernet port.

Specify a MAC Address - Specify a MAC address for the WAN Ethernet port. Select this option if your ISP authenticates by MAC addresses.

After finishing all the settings here, please click OK to activate them.

II-1-2-2 WAN2 Details Page (Static or Dynamic IP, Physical Mode: Ethernet)

For static IP mode, you usually receive a fixed public IP address or a public subnet, namely multiple public IP addresses from your DSL or Cable ISP service providers. In most cases, a Cable service provider will offer a fixed public IP, while a DSL service provider will offer a public subnet. If you have a public subnet, you could assign an IP address or many IP address to the WAN interface.

To use **Static or Dynamic IP** as the accessing protocol of the internet, please click the **Static or Dynamic IP** tab. The following web page will be shown.

WAN >> Internet Access

WAN 1

PPPoE	Static or Dynamic IP	PPTP/L2TP	IPv6

8.	<input type="checkbox"/>	0.0.0.0

DNS Server IP Address

Primary IP Address - IP address of primary DNS server.

Secondary IP Address - IP address of secondary DNS server.

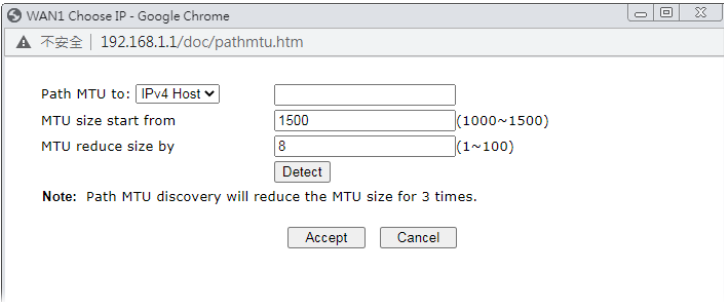

WAN Connection Detection

Configures how the WAN connection is monitored.

Mode - Choose **ARP Detect**, **Ping Detect**, **Always On** or **Strict ARP Detect** for the system to execute for WAN detection.

- **ARP Detect** - The router broadcasts an ARP request every 5 seconds. If no response is received within 30 seconds, the WAN connection is deemed to have failed.
- **Ping Detect** - The router sends an ICMP (Internet Control Message Protocol) echo request every second to the host, whose address is specified in the Ping IP field, to verify the WAN connection. If the remote host does not respond within 30 seconds, the WAN connection is deemed to have failed.
- **Always On**- The router assumes the WAN connection is always active.

If you choose **Ping Detect** as the detection mode, you have

	<p>to enter required settings for the following items.</p> <ul style="list-style-type: none"> ● Primary/Secondary Ping IP - Enter Primary or Secondary IP address in this field for pinging. ● Ping Gateway IP - Enable this setting to use current WAN gateway IP address for pinging. With the IP address(es) pinging, Vigor router can check if the WAN connection is on or off. ● TTL (Time to Live) - Time To Live, the maximum allowed number of hops to the ping destination. Valid values range from 1 to 255. ● Ping Interval - Enter the interval for the system to execute the PING operation. ● Ping Retry - Enter the number of times that the system is allowed to execute the PING operation before WAN disconnection is judged.
<p>MTU</p>	<p>Maximum Transmission Unit, the size of the largest packet, in bytes, that can be transmitted to the WAN. The maximum value is 1500. For PPPoE connections, there is always an 8-byte overhead, so the maximum valid MTU value for PPPoE is 1492.</p> <p>Path MTU Discovery - Use this feature to determine the optimal MTU size for the WAN.</p> <p>Click Detect to open the following dialog.</p>  <ul style="list-style-type: none"> ● Path MTU to - Select Host / IP, for an IPv4 address or Host / IPv6, for an IPv6 address, and then enter the IP address in the textbox. ● MTU size start from - Determine the starting point value of the packet. ● MTU reduce size by - Number of octets by which to decrease the 1500-byte MTU. Start with a 0 value for the reduce size and click the Detect button. If the message Fail is returned, increase the MTU reduce size and try again. Repeat until you see the message Success, indicating that the optimal MTU size has been reached. ● Detect - Click it to detect a suitable MTU value. ● Accept - After clicking it, the detected value will be displayed in the field of MTU.
<p>Keep WAN Connection</p>	<p>Enable PING to keep alive - If selected, ping a WAN host to maintain the connection. If unselected, ping to keep WAN alive is disabled.</p> <p>PING to the IP - IP address of host to be pinged.</p> <p>PING Interval - Number of minutes to wait before sending a ping request to the WAN host.</p>
<p>TTL</p>	<p>Change the TTL value - Enable or disable the TTL (Time to</p>

	<p>Live) for a packet transmitted through Vigor router.</p> <ul style="list-style-type: none"> ● If enabled - TTL value will be reduced (-1) when it passes through Vigor router. It will cause the client, accessing Internet through Vigor router, be blocked by certain ISP when TTL value becomes "0". ● If disabled - TTL value will not be reduced. Then, when a packet passes through Vigor router, it will not be cancelled. That is, the client who sends out the packet will not be blocked by ISP.
RIP Protocol	<p>Routing Information Protocol is abbreviated as RIP(RFC1058). If selected, the router can exchange routing information with other routers.</p>
MAC Address	<p>Default MAC Address - Use the default MAC address for the WAN Ethernet port.</p> <p>Specify a MAC Address - Specify a MAC address for the WAN Ethernet port. Select this option if your ISP authenticates by MAC addresses.</p>

After finishing all the settings here, please click **OK** to activate them.

II-1-2-3 WAN2 Details Page (PPTP/L2TP, Physical Mode: Ethernet)

To use PPTP/L2TP as the accessing protocol of the internet, please click the PPTP/L2TP tab. The following web page will be shown.

WAN >> Internet Access

WAN 1

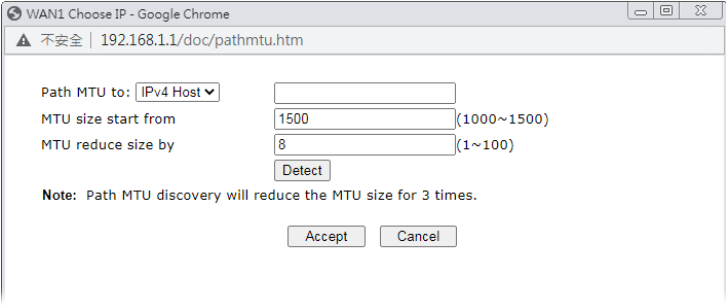

PPPoE	Static or Dynamic IP	PPTP/L2TP	IPv6
<input type="radio"/> Enable PPTP <input type="radio"/> Enable L2TP <input checked="" type="radio"/> Disable Server Address <input type="text"/> Max: 63 characters Specify Gateway IP Address <input type="text"/>		PPP Setup PPP Authentication <input type="text" value="PAP/CHAP/MS-CHAP/MS-CHAPv2"/> Idle Timeout <input type="text" value="-1"/> second(s) IP Address Assignment Method (IPCP) <input type="button" value="WAN IP Alias"/> Fixed IP: <input type="radio"/> Yes <input checked="" type="radio"/> No (Dynamic IP) Fixed IP Address <input type="text"/>	
ISP Access Setup Username <input type="text"/> Password <input type="text"/> Schedule Profile: <input type="text" value="None"/> => <input type="text" value="None"/> => <input type="text" value="None"/> => <input type="text" value="None"/>		WAN IP Network Settings <input checked="" type="radio"/> Obtain an IP address automatically <input type="radio"/> Specify an IP address IP Address <input type="text"/> Subnet Mask <input type="text"/>	
MTU <input type="text" value="1460"/> (Max:1460) Path MTU Discovery <input type="button" value="Detect"/>			

Note:

VPN feature may be affected when the value of MTU is changed, please also check your value of VPN mss by using "VPN mss set" command.
 We recommend to put the same decreased value on VPN mss. For example, reducing the MTU from 1500 -> 1400, then it will need to reduce 100 from mss value.

Available settings are explained as follows:

Item	Description
PPTP/L2TP	<p>Enable PPTP- Click this radio button to enable a PPTP client to establish a tunnel to a DSL modem on the WAN interface.</p> <p>Enable L2TP - Click this radio button to enable a L2TP client to establish a tunnel to a DSL modem on the WAN interface.</p> <p>Disable - Click this radio button to close the connection through PPTP or L2TP.</p> <p>Server Address - Specify the IP address of the PPTP/L2TP server if you enable PPTP/L2TP client mode.</p> <p>Specify Gateway IP Address - Specify the gateway IP address for the WAN interface.</p>
ISP Access Setup	<p>Username - Username provided by the ISP for PPTP/L2TP authentication.</p> <p>Password - Password provided by the ISP for PPTP/L2TP authentication.</p> <p>Schedule Profile - Specify up to 4 time schedule entries to enable or disable the WAN. All the schedules can be set previously in Applications >> Schedule web page and you can use the number that you have set in that web page.</p>
MTU	<p>Maximum Transmission Unit, the size of the largest packet, in bytes, that can be transmitted to the WAN. The maximum value is 1500. For PPPoE connections, there is always an 8-byte overhead, so the maximum valid MTU value for PPPoE</p>

	<p>is 1492.</p> <p>Path MTU Discovery - Use this feature to determine the optimal MTU size for the WAN.</p> <p>Click Detect to open the following dialog.</p>  <ul style="list-style-type: none"> ● Path MTU to - Select Host / IP, for an IPv4 address or Host / IPv6, for an IPv6 address, and then enter the IP address in the textbox. ● MTU size start from - Determine the starting point value of the packet. ● MTU reduce size by - Number of octets by which to decrease the 1500-byte MTU. Start with a 0 value for the reduce size and click the Detect button. If the message Fail is returned, increase the MTU reduce size and try again. Repeat until you see the message Success, indicating that the optimal MTU size has been reached. ● Detect - Click it to detect a suitable MTU value. ● Accept - After clicking it, the detected value will be displayed in the field of MTU.
<p>PPP Setup</p>	<p>PPP Authentication - The protocol used for PPP authentication.</p> <ul style="list-style-type: none"> ● PAP only - Only PAP (Password Authentication Protocol) is used. ● PAP/CHAP/MS-CHAP/MS-VHAPv2- Both PAP and CHAP (Challenge-Handshake Authentication Protocol) can be used for PPP authentication. Router negotiates with the PPTP or L2TP server to determine which protocol to use. ● Idle Timeout - Maximum length of time, in seconds, of idling allowed (no traffic) before the connection is dropped.
<p>IP Address Assignment Method(IPCP)</p>	<p>Configure the router according to how your ISP allocates WAN IP address(es) to you.</p> <p>WAN IP Alias - Configure the router according to how your ISP allocates WAN IP address(es) to you.</p> <p>Fixed IP - Enter a fixed IP address.</p> <ul style="list-style-type: none"> ● Yes- ISP has assigned a fixed WAN IP address, which is to be entered below in Fixed IP Address. ● No-WAN IP address is dynamically allocated. <p>Fixed IP Address - WAN IP address assigned by the ISP.</p>
<p>WAN IP Network Settings</p>	<p>Obtain an IP address automatically - The router receives IP configuration information from a DHCP server.</p> <p>Specify an IP address -Use the IP address, Subnet Mask and</p>

Gateway values specified below.

- IP Address -WAN IP address assigned by the ISP.
 - Subnet Mask -WAN subnet mask.

Info

At present, the IPv6 prefix can be acquired via the PPPoE mode connection which is available for the areas such as Taiwan (hinet), the Netherlands, Australia and UK.

II-1-2-8 WAN1/WAN3 Details Page for IPv6 – TSPC

Tunnel setup protocol client (TSPC) is an application which could help you to connect to IPv6 network easily.

Please make sure your IPv4 WAN connection is OK and apply one free account from hexago (<http://gogonet.gogo6.com/page/freenet6-account>) before you try to use TSPC for network connection. TSPC would connect to tunnel broker and requests a tunnel according to the specifications inside the configuration file. It gets a public IPv6 IP address and an IPv6 prefix from the tunnel broker and then monitors the state of the tunnel in background.

After getting the IPv6 prefix and starting router advertisement daemon (RADVD), the PC behind this router can directly connect to IPv6 the Internet.

WAN 1

OK Cancel

Available settings are explained as follows:

Item	Description
Username	It is suggested for you to apply another username and password for http://gogonet.gogo6.com/page/freenet6-account .
Password	Enter the password assigned with the user name.
Tunnel Broker	Enter the address for the tunnel broker IP, FQDN or an optional port number.
WAN Connection Detection	<p>Configures how the WAN connection is monitored.</p> <p>Mode - Choose Ping Detect or Always On for the system to execute for the WAN detection.</p> <ul style="list-style-type: none"> ● Ping Detect - The router sends an ICMP (Internet Control Message Protocol) echo request every second to the host, whose address is specified in the Ping IP field, to verify the WAN connection. If the remote host does not respond within 30 seconds, the WAN connection is deemed to have failed. ● Always On - The router assumes the WAN connection is always active. <p>If you choose Ping Detect as the detection mode, you have to enter required settings for the following items.</p> <ul style="list-style-type: none"> ● Ping IP/Hostname - Enter IP address in this field for ping. ● TTL (Time to Live) - Time To Live, the maximum allowed number of hops to the ping destination. Valid values range from 1 to 255.

After finished the above settings, click OK to save the settings.

II-1-2-9 WAN1/WAN3 Details Page for IPv6 – AICCU

WAN >> Internet Access

WAN 1

PPPoE	Static or Dynamic IP	PPTP/L2TP	IPv6
Internet Access Mode			
Connection Type		AICCU	
AICCU Configuration			
<input type="checkbox"/> Always On			
Username		Max: 63 characters	
Password		Max: 63 characters	
Tunnel Broker		tic.sixxs.net	
Tunnel ID			
Subnet Prefix			
WAN Connection Detection			
Mode		Ping Detect	
Ping IP/Hostname			
TTL(1-255,0:Auto)		0	

Note:

If "Always On" is not enabled, AICCU connection would only retry three times.

OK Cancel

Available settings are explained as follows:

Item	Description
Always On	If selected, always attempt to reconnect if connection is lost. If unselected, reconnect up to 3 times if connection is lost.
Username	Login Username. Enter the name obtained from the broker. Please apply new account at http://www.sixxs.net/ . It is suggested for you to apply another username and password.
Password	Login Password. Enter the password.
Tunnel Broker	Address of the tunnel broker. The server can provide IPv6 tunnels to sites or end users over IPv4. Enter the address for the tunnel broker IP, FQDN or an optional port number.
Tunnel ID	One user account may have several tunnels. And, each tunnel shall have one specified tunnel ID (e.g., T115394). Enter the ID offered by Tunnel Broker.
Subnet Prefix	Enter the subnet prefix address/L obtained from service provider. The maximum length of the prefix you can set is 128 characters.
WAN Connection Detection	Configures how the WAN connection is monitored. Mode - Choose Ping Detect or Always On for the system to execute for the WAN detection.

	<ul style="list-style-type: none"> ● Ping Detect - The router sends an ICMP (Internet Control Message Protocol) echo request every second to the host, whose address is specified in the Ping IP field, to verify the WAN connection. If the remote host does not respond within 30 seconds, the WAN connection is deemed to have failed. ● Always On - The router assumes the WAN connection is always active. <p>If you choose Ping Detect as the detection mode, you have to enter required settings for the following items.</p> <ul style="list-style-type: none"> ● Ping IP/Hostname - Enter an IP address in this field for pinging. ● TTL (Time to Live) - Time To Live, the maximum allowed number of hops to the ping destination. Valid values range from 1 to 255.
--	---

After finished the above settings, click OK to save the settings.

II-1-2-10 WAN1 Details Page for IPv6 – DHCPv6 Client

DHCPv6 client mode would use DHCPv6 protocol to obtain IPv6 address from server.

WAN >> Internet Access

WAN 1

PPPoE	Static or Dynamic IP	PPTP/L2TP	IPv6
Internet Access Mode			
Connection Type		DHCPv6 Client	
DHCPv6 Client Configuration			
IAID (Identity Association ID)		1369844162	
DUID (DHCP Unique ID)		000300011449bc0a8ab9	
Authentication Protocol		None	
WAN Connection Detection			
Mode		Ping Detect	
Ping IP/Hostname			
TTL(1-255,0:Auto)		0	
RIPng Protocol			
<input type="checkbox"/> Enable			
Bridge Mode			
<input type="checkbox"/> Enable Bridge Mode			
Bridge Subnet		LAN 1	

Available settings are explained as follows:

Item	Description
DHCPv6 Client Configuration	<p>IAID - Unique integer that identifies this WAN interface.</p> <p>DUID - Display the DHCP unique ID used by this WAN interface.</p> <p>Authentication Protocol - This protocol will be used for the client to be authenticated by DHCPv6 server before accessing into Internet. There are three types can be specified, Reconfigure Key, Delayed and None. In general,</p>

	<p>the default setting is None.</p> <ul style="list-style-type: none"> ● Reconfigure Key - During the connection process, DHCPv6 server will authenticate the client automatically. ● Delayed - During the connection process, DHCPv6 server will authenticate and identify the client based on the key ID, realm and secret information specified in these fields. <ul style="list-style-type: none"> - Key ID - Type a value (range from 1 to 65535) which will be used to generate HMAC-MD5 value. - Realm - The name (1 to 31 characters) typed here will identify the key which generates HMAC-MD5 value. - Secret - Type a text (1 to 31 characters) as a unique identifier for each client on each DHCP server.
WAN Connection Detection	<p>Configures how the WAN connection is monitored.</p> <p>Mode - Choose Always On, Ping Detect or NS Detect for the system to execute for WAN detection.</p> <ul style="list-style-type: none"> ● Ping Detect - The router sends an ICMP (Internet Control Message Protocol) echo request every second to the host, whose address is specified in the Ping IP field, to verify the WAN connection. If the remote host does not respond within 30 seconds, the WAN connection is deemed to have failed. ● Always On - The router assumes the WAN connection is always active. ● NS Detect - The router verifies connectivity by issuing Neighbor Solicitation packets. <p>If you choose Ping Detect as the detection mode, you have to enter required settings for the following items.</p> <ul style="list-style-type: none"> ● Ping IP/Hostname - Enter an IP address in this field for pinging. ● TTL (Time to Live) -Time To Live, the maximum allowed number of hops to the ping destination. Valid values range from 1 to 255.
RIPng Protocol	<p>RIPng (RIP next generation) offers the same functions and benefits as IPv4 RIP v2.</p>
Bridge Mode	<p>Enable Bridge Mode - If selected, the router will bridge the WAN connection to a LAN group.</p> <p>Enable Firewall - It is available when Bridge Mode is enabled. When both Bridge Mode and Firewall check boxes are enabled, the settings configured (user profiles) under User Management will be ignored. And all of the filter rules defined and enabled in Firewall menu will be activated.</p> <p>Bridge Subnet - LAN subnet to be bridged.</p>

After finished the above settings, click OK to save the settings.

II-1-2-11 WAN1 Details Page for IPv6 – Static IPv6

This page allows you to configure an ISP-assigned static IPv6 setup.

WAN >> Internet Access

WAN 1

PPPoE	Static or Dynamic IP	PPTP/L2TP	IPv6

And all of the filter rules defined and enabled in Firewall menu will be activated.</p> <p>Bridge Subnet - LAN subnet to be bridged.</p>

After finished the above settings, click OK to save the settings.

II-1-2-12 WAN1 Details Page for IPv6 – 6in4 Static Tunnel

This page allows you to setup 6in4 Static Tunnel for WAN interface.

However, 6in4 offers a prefix outside of 2002::0/16. So, you can use a fixed endpoint rather than anycast endpoint. The mode has more reliability.

WAN 1

PPPoE	Static or Dynamic IP	PPTP/L2TP	IPv6
Internet Access Mode			
Connection Type		6in4 Static Tunnel ▼	
6in4 Static Tunnel			
Remote Endpoint IPv4 Address		<input type="text"/>	
6in4 IPv6 Address		<input type="text"/>	/ 64 (default:64)
LAN Routed Prefix		<input type="text"/>	/ 64 (default:64)
Tunnel TTL		<input type="text" value="255"/>	(default:255)
WAN Connection Detection			
Mode		Ping Detect ▼	
Ping IP/Hostname		<input type="text"/>	
TTL(1-255,0:Auto)		<input type="text" value="0"/>	

Available settings are explained as follows:

Item	Description
6in4 Static Tunnel	<p>Remote Endpoint IPv4 Address - WAN IPv6 address assigned by the tunnel provider.</p> <p>6in4 IPv6 Address - WAN IPv6 address and prefix length assigned by the tunnel provider.</p> <p>LAN Routed Prefix - LAN IPv6 address prefix and prefix length.</p> <p>Tunnel TTL - Time to live value, which is the maximum number of hops allowed to the endpoint.</p>
WAN Connection Detection	<p>Configures how the WAN connection is monitored.</p> <p>Mode - Choose Always On or Ping Detect for the system to execute for WAN detection.</p> <ul style="list-style-type: none"> ● Ping Detect - The router sends an ICMP (Internet Control Message Protocol) echo request every second to the host, whose address is specified in the Ping IP field, to verify the WAN connection. If the remote host does not respond within 30 seconds, the WAN connection is deemed to have failed. ● Always On - The router assumes the WAN connection is always active. <p>If you choose Ping Detect as the detection mode, you have to enter required settings for the following items.</p> <ul style="list-style-type: none"> ● Ping IP/Hostname - Enter an IP address in this field for pinging. ● TTL (Time to Live) -Time To Live, the maximum allowed number of hops to the ping destination. Valid values range from 1 to 255.

After finished the above settings, click OK to save the settings.

Below shows an example for successful IPv6 connection based on 6in4 Static Tunnel mode.

Note:

If the port be configured for bridge mode, the setting of the port in LAN >> VLAN Configuration will not work.

Note:

Channel 2~3 is reserved.

OK

Cancel

Available settings are explained as follows:

Item	Description
Channel	Display the number of each channel. Channels 1 is used by the Internet Access web user interface and can not be configured here. Channels 4 ~ 10 are configurable.
Enable	Display whether the settings in this channel are enabled (Yes) or not (No).
WAN Type	Displays the physical medium that the channel will use.
VLAN Tag	Displays the VLAN tag value that will be used for the packets traveling on this channel.
Port-based Bridge	The network traffic flowing on each channel will be identified by the system via their VLAN Tags. Channels using the same WAN type may not configure the same VLAN tag value. Enable - Check this box to enable the port-based bridge function on this channel. P1 ~ P4 - Check the box(es) to build bridge connection on LAN.

To configure a channel, click its channel number.

WAN links for Channel 4~6 are provided for router-borne application such as TR-069. The settings must be applied and obtained from your ISP. For your special request, please contact with your ISP and then click WAN link of Channel 4~6 to configure your router.

WAN >> Multi-VLAN >> Channel 4

Enable Channel 4:

Physical Members

P1 P2 P3 P4

Note:

1. P1 is reserved for NAT use, and cannot be configured for bridge mode.
2. If the port be configured for bridge mode, the setting of the port in LAN >> VLAN Configuration will not work.

Available settings are explained as follows:

Item	Description
Enable Channel 7~10	Enable - Select to enable this channel. Disable - Select to disable this channel.
General Settings	VLAN Tag - Enter the value as the VLAN ID number. Valid settings are in the range from 1 to 4095. The network traffic flowing on each channel will be identified by the system via their VLAN Tags. Channels using the same WAN type may not configure the same VLAN tag value. Priority - Choose the number to determine the packet priority for such VLAN. The range is from 0 to 7.
Bridge mode	If selected, bridge this channel to one or more LAN ports. Physical Members - If selected, a channel is bridged to this LAN port. Note: LAN port P1 is reserved for NAT use and cannot be selected for bridging.

After finished the above settings, click OK to save the settings.

II-1-4 WAN Budget

This function is used to determine the data *traffic volume* for each WAN interface respectively to prevent overcharges for data transmission by the ISP. Please note that the Quota Limit and Billing cycle day of month settings will need to be configured correctly first in order for some period calculations to be performed correctly.

The WAN Budget feature allows you to conveniently keep track of Internet traffic volume. You can:

- set up calendar cycles to monitor;
- limit your Internet usage according to your ISP's quota;
- set up action(s) to take when the quota is exceeded.

II-1-4-1 General Setup

WAN >> WAN Budget

General Setup		Status			
Index	Enable	Quota	When quota exceeded	Time cycle	Duration
WAN1	<input type="checkbox"/>	0MB/0MB			0/00/00 00:00~0/00/00 00:00
WAN3	<input type="checkbox"/>	0MB/0MB			0/00/00 00:00~0/00/00 00:00

Note:

1. The budget traffic information provided here is for reference only, please consult your ISP for the actual traffic usage and charges.
2. When hardware acceleration function is used, the monitored WAN traffic of Ethernet WAN interfaces may be slightly inaccurate.

OK

Cancel

Item	Description
Index	The WAN port. Click to configure WAN Budget for a particular WAN.
Enable	v - WAN Budget is enabled on this WAN. x - WAN Budget is disabled on this WAN.
Quota	The current cycle's Internet usage is expressed as x/y where x is the cumulative usage and y is the upper limit. For example, 100MB/200MB means the usage thus far in this cycle is 100MB, and the upper limit is 200MB.
When quota exceeded	Actions to be taken once the quota is reached. Shutdown - WAN will be disabled. Mail Alert - Email will be sent to the administrator.
Time cycle	Reset frequency of the usage data. Monthly - The Monthly option in the Criterion and Action tab was used to set up the usage quota. User Defined : The User Defined option in the Criterion and Action tab was used to set up the usage qota.
Duration	Start and end timestamps of the current cycle.

Click WAN# link to open the following web page.

WAN 1

Enable

Criterion and Action

Quota Limit: MB

When quota exceeded :

Shutdown WAN interface

Using **Notification Object**

Set **Mail Alert** or **SMS message**.

Monthly **Custom**

Select the day of a month when your (cellular) data resets.

Data quota resets on day at

Note:

1. Please make sure the **Time and Date** of the router is configured.
2. SMS message and mail will be sent when the usage reaches 95% and 100% of quota.

Available settings are explained as follows:

Item	Description
Enable	When selected, WAN Budget is enabled for this WAN.
Quota Limit	Enter the data traffic quota allowed for such WAN interface. There are two unit (MB and GB) offered for you to specify.
When quota exceeded	<p>Check the box(es) as the condition(s) for the system to perform when the traffic has exceeded the budget limit.</p> <p>Shutdown WAN interface - All the outgoing traffic through such WAN interface will be terminated.</p> <ul style="list-style-type: none"> ● Using Notification Object - The system will send out a notification based on the content of the notification object. ● Set Mail Alert - The system will send out a warning message to the administrator when the quota is running out. However, the connection charges will be calculated continuously. ● Set SMS message - The system will send out SMS message to the administrator when the quota is running out.
Monthly	<p>Some ISP might apply for the network limitation based on the traffic limit per month. This setting is to offer a mechanism of resetting the traffic record every month.</p> <p style="text-align: center;">Monthly Custom</p> <p>Select the day of a month when your (cellular) data resets.</p> <p>Data quota resets on day <input type="text" value="1"/> at <input type="text" value="00:00"/></p> <p>Data quota resets on day ... - You can determine the starting day in one month.</p>
Custom	<p>This setting allows the user to define the billing cycle according to his request. The WAN budget will be reset with an interval of billing cycle.</p> <p>Monthly is default setting. If long period or a short period is required, use Custom. The period of cycle duration is between 1 day and 60 days. You can determine the cycle</p>

duration by specifying the days and the hours. In addition, you can specify which day of today is in a cycle.

Use Cycle in hours -

Monthly	Custom
---------	--------

Use Cycle in hours

Use Cycle in days

Usage counter resets at the beginning of each cycle.

Cycle duration : days and hours

Today is day in the cycle.

- **Cycle duration:** Specify the days and hours to reset the traffic record. For example, 7 means the whole cycle is 7 days; 20 means the whole cycle is 20 days. When the time is up, the router will reset the traffic record automatically.
- **Today is day -** Specify the day in the cycle as the starting point which Vigor router will reset the traffic record. For example, "3" means the third day of the cycle duration.

Use Cycle in days -

Monthly	Custom
---------	--------

Use Cycle in hours

Use Cycle in days

Usage counter resets at the beginning of each cycle.

Cycle duration : days.

Today is day in the cycle and data quota resets at

- **Cycle duration:** Specify the days to reset the traffic record. For example, 7 means the whole cycle is 7 days; 20 means the whole cycle is 20 days. When the time is up, the router will reset the traffic record automatically.
- **Today is day -** Specify the day and time for data quota rest in the cycle as the starting point which Vigor router will reset the traffic record. For example, "3" means the third day of the cycle duration.

After finished the above settings, click OK to save the settings.

II-1-4-2 Status

The status page displays the status WAN budget, including the duration and the usage.

WAN >> WAN Budget

If the WAN budget is exhausted, a lock will be displayed on the page if **Shutdown WAN interface** is selected. Which means no data transmission will be carried out. Moreover, the system will send out a warning message to the administrator if **Mail Alert** is selected. Or, the system will send out SMS message to the administrator if **SMS message** is selected.

WAN >> WAN Budget

II-2 LAN

A LAN(Local Area Network) comprises a collection of LAN clients, which are networked devices on your premises. A LAN client can be a computer, a printer, a Voice-over-IP (VoIP) phone, a mobile phone, a gaming console, an Internet Protocol Television (IPTV), etc, and can have either a wired (using Ethernet cabling) or wireless (using Wi-Fi) network connection.

LAN clients within the same LAN are normally able to communicate with one another directly, as they are peers to one another, unless measures, such as firewalls or VLANs, have been put in place to restrict such access. Nowadays the most common LAN firewalls are implemented on the LAN client itself. For example, Microsoft Windows since Windows XP and Apple OS X have built-in firewalls that can be configured to restrict traffic coming in and going out of the computer. VLANs, on the other hand, are usually set up using network switches or routers.

To communicate with the hosts outside of the LAN, LAN clients have to go through a network gateway, which in most cases is a router that sits between the LAN and the ISP network, which is the WAN. The router acts as a director to ensure traffic between the LAN and the WAN reach their intended destinations.

IP Address

On most broadband networks, the ISP assigns a single WAN IP address to the subscriber. All LAN clients have to share this WAN IP address when accessing the Internet. To achieve this, a technique called Network Address Translation (NAT) is used. Under NAT, a private block of IP addresses is assigned to the LAN clients, which communicate with WAN hosts through the router, also known as the gateway.

On outgoing traffic to the WAN, the router makes note that a LAN client has attempted to reach a WAN host, and forwards the request to the intended WAN recipient.

On traffic incoming to the LAN from a WAN host, the router checks its records to see if a matching outstanding request from a LAN client to this WAN host exists, and if so, forwards it to the LAN client. Otherwise, the traffic is dropped.

There are 3 distinct blocks of IPv4 address that are reserved for use as private IP addresses on a LAN.

Name	IP Address Range	Number of Available Addresses	Largest Subnet Mask
24-bit Block	10.0.0.0 to 10.255.255.255	16,777,216	255.0.0.0
20-bit Block	172.16.0.0 to 172.31.255.255	1,048,576	255.240.0.0
16-bit Block	192.168.0.0 to 192.168.255.255	65,536	255.255.0.0

The default beginning IP Address of LAN 1 is 192.168.1.1, and the Subnet Mask is 255.255.255.0, for a total of 254 assignable IP addresses, from 192.168.1.1 to 192.168.1.254. The final IP address of the selected range is reserved for routing and cannot be assigned to a LAN client.

In most cases, the default IP address block should work satisfactorily. However, there are situations where you need to select a different address block, such as when you need to communicate with other LANs that already use the same address block.

Private IP addresses can be assigned automatically to LAN clients using Dynamic Host Configuration Protocol (DHCP), or manually assigned. The DHCP server can either be the router (the most common case), or a separate server, that hands out IP addresses to DHCP clients.

Alternatively, static IP addresses can be manually configured on LAN clients as part of their network settings. No matter how IP addresses are configured, it is important that no two devices get the same IP address. If both DHCP and static assignment are used on a network, it is important to exclude the static IP addresses from the DHCP IP pool. For example, if your LAN uses the 192.168.1.x subnet and you have 20 DHCP clients and 20 static IP clients, you could configure 192.168.1.10 as the Start IP Address, 50 as the IP Pool Counts (enough for the current number of DHCP clients, plus room for future expansion), and use addresses greater than 192.168.1.100 for static assignment.

Web User Interface

To begin configuring the LAN settings, select LAN>>General Settings from the menu bar of the Web UI.

II-2-1 General Setup

This page provides you the general settings for LAN.

There are eight subnets provided by the router which allow users to divide groups into different subnets (LAN1 - LAN4). In addition, different subnets can link for each other by configuring **Inter-LAN Routing**. At present, LAN1 setting is fixed with NAT mode only. LAN2 - LAN4 can be operated under NAT or Route mode. IP Routed Subnet can be operated under Route mode.

LAN 1 is always enabled and is used as the default subnet. LANs 2 to 4 are subnets to be used in conjunction with Virtual LANs (VLANs). Each VLAN can be configured to allow or disallow communication with other VLANs using the Inter-LAN Routing matrix.

To configure a subnet, select its **Details Page** button to bring up the LAN Details Page.

Available settings are explained as follows:

Item	Description
General Setup	<p>Allow to configure settings for each subnet respectively.</p> <p>Index - Display all of the LAN items.</p> <p>Enable- Basically, LAN1 status is enabled in default. LAN2 -LAN4 and IP Routed Subnet can be observed by checking the box of Status.</p> <p>DHCP/DHCPv6- LAN1 is configured with DHCP/DHCPv6 in default. If required, please check the DHCP box for each LAN.</p> <p>IP Address - Display the IP address for each LAN item. Such information is set in default and you can not modify it.</p> <p>Details Page - Click it to access into the setting page. Each LAN will have different LAN configuration page. Each LAN must be configured in different subnet.</p> <p>IPv6 - Click it to access into the settings page of IPv6.</p>
DHCP Server Option	<p>DHCP packets can be processed by adding option number and data information when such function is enabled.</p> <p>For detailed information, refer to later section.</p>
Force router to use "DNS server IP address"	<p>Force Vigor router to use DNS servers configured in LAN1/LAN2/LAN3/LAN4 instead of DNS servers given by the Internet Access server (PPPoE, PPTP, L2TP or DHCP server).</p>
Inter-LAN Routing	<p>Check the box to link two or more different subnets (LAN and LAN).</p> <p>Inter-LAN Routing allows different LAN subnets to be interconnected or isolated.</p> <p>It is only available when the VLAN functionality is enabled. Refer to section II-2-2 VLAN on how to set up VLANs.</p> <p>In the Inter-LAN Routing matrix, a selected checkbox means that the 2 intersecting LANs can communicate with each other.</p>

When you finish the configuration, please click **OK** to save and exit this page.

Info

To configure a subnet, select its Details Page button to bring up the LAN Details Page.

II-2-1-1 Details Page for LAN1 – Ethernet TCP/IP and DHCP Setup

This page has two tabs, LAN Ethernet TCP/IP and DHCP Setup, which sets up the IPv4 LAN environment, and LAN IPv6 Setup, which sets up the IPv6 environment.

LAN >> General Setup

LAN 1 Ethernet TCP / IP and DHCP Setup	LAN 1 IPv6 Setup
Network Configuration For NAT Usage IP Address <input type="text" value="192.168.1.1"/> Subnet Mask <input type="text" value="255.255.255.0 / 24"/>	DHCP Server Configuration <input type="radio"/> Disable <input checked="" type="radio"/> Enable Server <input type="radio"/> Enable Relay Agent Start IP Address <input type="text" value="192.168.1.10"/> IP Pool Counts <input type="text" value="200"/> (max. 253) Gateway IP Address <input type="text" value="192.168.1.1"/> Lease Time <input type="text" value="86400"/> (s) <input checked="" type="checkbox"/> Clear DHCP lease for inactive clients periodically
RIP Protocol Control <input type="text" value="Disable"/>	DNS Server IP Address Primary IP Address <input type="text"/> Secondary IP Address <input type="text"/>

OK

Available settings are explained as follows:

Item	Description
Network Configuration	<p>For NAT Usage,</p> <p>IP Address - This is the IP address of the router. (Default: 192.168.1.1).</p> <p>Subnet Mask - The subnet mask, together with the IP Address field, indicates the maximum number of clients allowed on the subnet. (Default: 255.255.255.0/ 24).</p> <p>RIP Protocol Control - When Enabled, the router will attempt to exchange routing information with neighbouring routers using the Routing Information Protocol.</p>
DHCP Server Configuration	<p>DHCP stands for Dynamic Host Configuration Protocol. The router by factory default acts a DHCP server for your network so it automatically dispatches related IP settings to any local user configured as a DHCP client. It is highly recommended that you leave the router enabled as a DHCP server if you do not have a DHCP server for your network.</p> <p>If you want to use another DHCP server in the network other than the Vigor Router's, you can let Relay Agent help you to redirect the DHCP request to the specified location.</p> <p>Disable - Disables the built-in DHCP server on the router.</p> <p>Enable Server - Enables the built-in DHCP server on the router.</p> <ul style="list-style-type: none"> ● Start IP Address - The beginning LAN IP address that is given out to LAN DHCP clients. ● IP Pool Counts - The maximum number of IP addresses to be handed out by DHCP. The default value is 200. Valid range is between 1 and 1021. The actual number of IP addresses available for assignment is the IP Pool Counts, or 1021 minus the last octet of the Start IP Address, whichever is smaller. ● Gateway IP Address - The IP address of the gateway, which is the host on the LAN that relays all traffic

coming into and going out of the LAN. The gateway is normally the router, and therefore the Gateway IP Address should be identical to the IP Address in the **Network Configuration** section above.

- **Lease Time** - The maximum duration DHCP-issued IP addresses can be used before they have to be renewed.
- **Clear DHCP lease for inactive clients periodically** - If selected, the router sends ARP requests recycles IP addresses previously assigned to inactive DHCP clients to prevent exhaustion of the IP address pool.

Note: When Clear DHCP lease for inactive clients periodically is enabled, router will do the following:

- Check activities of DHCP clients by ARP requests every minute when the available DHCP IP addresses are less than 30.
- Clear DHCP lease when the client is not responding ARP replies.

Enable Relay Agent - When selected, all DHCP requests are forwarded to a DHCP server outside of the LAN subnet, and whose address is specified in the DHCP Server IP Address field.

- **DHCP Server IP Address** - IP Address of the DHCP server to which DHCP requests from LAN clients are forwarded.

DNS Server IP Address

DNS stands for Domain Name System. Every Internet host must have a unique IP address, also they may have a human-friendly, easy to remember name such as www.yahoo.com. The DNS server converts the user-friendly name into its equivalent IP address.

When these fields are populated, they will be used as the IP addresses of the DNS server information in DHCPv6 responses, overriding the ISP-supplied DNS server addresses.

Primary IP Address - You must specify a DNS server IP address here because your ISP should provide you with usually more than one DNS Server.

Secondary IP Address - You can specify secondary DNS server IP address here because your ISP often provides you more than one DNS Server.

The default DNS Server IP address can be found via Online Status:

Online Status

Physical Connection		System Uptime: 22:22:45	
IPV4	IPV6		
LAN Status	Primary DNS: 8.8.8.8	Secondary DNS: 8.8.4.4	
IP Address	TX Packets	RX Packets	
192.168.1.1	0	41533	

If both the Primary IP and Secondary IP Address fields are left empty, the router will assign DNS servers obtained from WAN interface to local users as a DNS proxy server and maintain a DNS cache. If there is no DNS servers available, router will use its own IP address instead.

If the IP address of a domain name is already in the DNS cache, the router will resolve the domain name immediately. Otherwise, the router forwards the DNS query packet to the external DNS server by establishing a WAN (e.g. DSL/Cable) connection.

When you finish the configuration, please click OK to save and exit this page.

Index	Matched MAC Address	given IP Address					

Available settings are explained as follows:

Item	Description
Network Configuration	<p>Enable/Disable - Click Enable to enable such configuration; click Disable to disable such configuration.</p> <p>For Routing Usage,</p> <p>IP Address - This is the IP address of the router. (Default: 192.168.1.1).</p> <p>Subnet Mask - The subnet mask, together with the IP Address field, indicates the maximum number of clients allowed on the subnet. (Default: 255.255.255.0/ 24).</p> <p>RIP Protocol Control,</p> <p>Enable - When Enabled, the router will attempt to exchange routing information with neighbouring routers using the Routing Information Protocol.</p>
DHCP Server Configuration	<p>DHCP stands for Dynamic Host Configuration Protocol. The router by factory default acts a DHCP server for your network so it automatically dispatch related IP settings to any local user configured as a DHCP client. It is highly recommended that you leave the router enabled as a DHCP server if you do not have a DHCP server for your network.</p> <p>Start IP Address - Enter a value of the IP address pool for the DHCP server to start with when issuing IP addresses. If the 1st IP address of your router is 192.168.1.1, the starting IP address must be 192.168.1.2 or greater, but smaller than 192.168.1.254.</p> <p>IP Pool Counts - Enter the maximum number of PCs that you want the DHCP server to assign IP addresses to. The default is 50 and the maximum is 253.</p> <p>Lease Time - Enter the time to determine how long the IP</p>

address assigned by DHCP server can be used.

Use LAN Port - Specify an IP for IP Route Subnet. If it is enabled, DHCP server will assign IP address automatically for the clients coming from P1 and/or P2. Please check the box of P1 and P2.

Use MAC Address - Check such box to specify MAC address.

MAC Address - Enter the MAC Address of the host one by one and click **Add** to create a list of hosts which can be assigned, deleted or edited from above pool. Set a list of MAC Address for 2nd DHCP server will help router to assign the correct IP address of the correct subnet to the correct host. So those hosts in 2nd subnet won't get an IP address belonging to 1st subnet.

Add - Enter the MAC address in the boxes and click this button to add.

Delete - Click it to delete the selected MAC address.

Edit - Click it to edit the selected MAC address.

Cancel - Click it to cancel the job of adding, deleting and editing.

When you finish the configuration, please click **OK** to save and exit this page.

II-2-1-4 Details Page for LAN IPv6 Setup

There are two configuration pages for LAN1/LAN2/LAN3/LAN4 Port, Ethernet TCP/IP and DHCP Setup (based on IPv4) and IPv6 Setup. Click the tab for each type and refer to the following explanations for detailed information. Below shows the settings page for IPv6.

LAN >> General Setup

LAN 1 Ethernet TCP / IP and DHCP Setup
LAN 1 IPv6 Setup

Enable IPv6

DHCPv6 Server

Enable Server Disable Server

IPv6 Address Random Allocation

Auto IPv6 range

Start IPv6 Address

End IPv6 Address

Advance setting

Advance setting

It provides 2 daemons for LAN side IPv6 address configuration. One is SLAAC(stateless) and the other is DHCPv6 (Stateful) server.

Available settings are explained as follows:

Item	Description
Enable IPv6	Enables or disables IPv6 on the LAN.

WAN Primary Interface	Select the WAN to be used for IPv6 traffic.
Static IPv6 Address	<p>Enter IPv6 Address and Prefix length to be added, or click an existing IPv6 address to be deleted in the Current IPv6 Address Table below and the values will be automatically copied over.</p> <p>IPv6 Address -Type static IPv6 address for LAN.</p> <p>Prefix Length - Enter the fixed value for prefix length.</p> <p>Add - Click it to add a new entry.</p> <p>Delete - Click it to remove an existed entry.</p>
Unique Local Address (ULA) configuration	<p>Unique Local Addresses (ULAs) are private IPv6 addresses assigned to LAN clients.</p> <p>Off - ULA is disabled.</p> <p>Manually ULA Prefix - LAN clients will be assigned ULAs generated based on the prefix manually entered.</p> <p>Auto ULA Prefix - LAN clients will be assigned ULAs using an automatically-determined prefix.</p>
Current IPv6 Address Table	Display current used IPv6 addresses.
DNS Server IPv6 Address	<p>Deploy when WAN is up - The RA (router advertisement) packets will be sent to LAN PC with DNS server information only when network connection by any one of WAN interfaces is up.</p> <p>Enable - The RA (router advertisement) packets will be sent to LAN PC with DNS server information no matter WAN connection is up or not.</p> <ul style="list-style-type: none"> ● Primary DNS Sever - Enter the IPv6 address for Primary DNS server. ● Secondary DNS Server -Type another IPv6 address for DNS server if required. <p>Disable - DNS server will not be used.</p>
Management	<p>Configures the Managed Address Configuration flag (M-bit) in Route Advertisements.</p> <ul style="list-style-type: none"> ● Off - No configuration information is sent using Route Advertisements. ● SLAAC(stateless) - M-bit is unset. ● DHCPv6(stateful) - M-bit is set, which indicates to LAN clients that they should acquire all IPv6 configuration information from a DHCPv6 server. The DHCPv6 server can either be the one built into the Vigor2860, or a separate DHCPv6 server. <p>Other Option (O-bit) - When selected, the Other Configuration flag is set, which indicates to LAN clients that IPv6 configuration information besides LAN IPv6 addresses is available from a DHCPv6 server.</p> <p>Setting the M-bit (see Management above) has the same effect as implicitly setting the O-bit, as DHCPv6 supplies all IPv6 configuration information, including what is indicated as available when the O-bit is set.</p>
DHCPv6 Server	<p>Enable Server -Click it to enable DHCPv6 server. DHCPv6 Server could assign IPv6 address to PC according to the Start/End IPv6 address configuration.</p> <p>Disable Server -Click it to disable DHCPv6 server.</p>

IPv6 Address Random Allocation - Check it to assign the DHCPv6 IP address randomly to prevent the attacks from the IPv6 reconnaissance techniques.

Auto IPv6 range - When selected, the router's built-in DHCPv6 server decides the LAN IPv6 address range to be used. When deselected, LAN IPv6 addresses given out will be within the range as specified in the **Start IPv6 Address** and **End IPv6 Address**.

- **Start IPv6 Address / End IPv6 Address** - Enter the start and end address for IPv6 server.

Advance setting - Click the **Edit** button to bring up the IPv6 Advanced Settings page.

LAN >> General Setup

Prefix	Prefix Length	Link Local	DUID
--------	---------------	------------	------

Advance setting

The Advanced Settings page has additional settings for Router Advertisement and enabling multiple WANs for IPv6 traffic.

Router Advertisement Configuration

Enable Disable

Hop Limit: 64

Min Interval Time(sec): 200

Max Interval Time(sec): 600

Default Lifetime(sec): 1800 (High Availability secondary is 0)

Default Preference: Medium

MTU: Auto, 0

RIPng Protocol

Enable

Extension WAN

Available WAN: [Empty]

Selected WAN: WAN3

Router Advertisement Configuration - Click **Enable** to enable router advertisement server. The router advertisement daemon sends Router Advertisement messages, specified by RFC 2461, to a local Ethernet LAN periodically and when requested by a node sending a Router Solicitation message. These messages are required for IPv6 stateless auto-configuration.

	<p>Disable - Click it to disable router advertisement server.</p> <p>Hop Limit - The value is required for the device behind the router when IPv6 is in use. Default value of hop limit field in Route Advertisement messages.</p> <p>Min/Max Interval Time (sec) - Minimum/ Maximum time, in seconds, between unsolicited multicast route advertisement messages sent by the RA server.</p> <p>Default Lifetime (sec) - Time, in seconds, that the router is to be used as the default router.</p> <p>Default Preference - Default preference value (Low, Medium, High) of the router sent in route advertisement messages.</p> <p>MTU - It means Max Transmit Unit for packet. If Auto is selected, the router determines the MTU value to send in route advertisement messages.</p> <p>RIPng Protocol - RIPng (RIP next generation) offers the same functions and benefits as IPv4 RIP v2.</p> <p>Extension WAN - In addition to the default WAN used for IPv6 traffic specified in the WAN Primary Interface in the LAN IPv6 Setup page, additional WANs can be selected to carry IPv6 traffic by enabling them in the Extension WAN section.</p> <p>Available WAN - Additional WANs available but not currently selected to carry IPv6 traffic.</p> <p>Selected WAN - Additional WANs selected to carry IPv6 traffic.</p>
--	---

After making changes on the Advance setting page, click the OK button to retain the changes and return to the LAN IPv6 Setup page. Be sure to click OK on the LAN IPv6 Setup page or else changes made on the Advance setting page will not be saved.

II-2-1-5 DHCP Server Options

DHCP Options can be configured by clicking the DHCP Server Option button on the LAN>> General Setup screen.

DHCP Server Customized Status

IPv4 IPv6 [Set to Factory Default](#)

Enable	Interface	Option	Type	Data
Customized List				

Enable:

Interface: All LAN1 LAN2 LAN3 LAN4 IP Routed Subnet

Next Server IP Address/SIAddr:

Option Number:

Data Type: ASCII Character (EX :Option:18, Data:/path)
 Hexadecimal Digit (EX : Option:18, Data:2f70617468)
 Address List (EX :Option:44, Data:172.16.2.10,172.16.2.20...)

Data: Max: 127 characters

Note:

1. Configuring options 44, 46 or 66 here will overwrite the settings by telnet command "msubnet".
2. Configuring option 3 here will overwrite the setting in "LAN >> General Setup" Details Page's "Gateway IP Address" field.
3. Configuring option 15 here will overwrite the setting in "WAN >> Internet Access >> Static or Dynamic IP" Detail Page's "Domain Name" field.

OK

Available settings are explained as follows:

Item	Description
Customized List	Shows all the DHCP options that have been configured in the system.
Enable	If selected, DHCP option entry is enabled. If unselected, DHCP option entry is disabled.
Interface	LAN interface(s) to which this entry is applicable.
Next Server IP Address/SIAddr	Overrides the DHCP Next Server IP address (DHCP Option 66) supplied by the DHCP server.
Option Number	DHCP option number (e.g., 100).
Data Type	Type of data in the Data field: ASCII Character - A text string. Example: /path. Hexadecimal Digit - A hexadecimal string. Valid characters are from 0 to 9 and from a to f. Example: 2f70617468. Address List - One or more IPv4 addresses, delimited by commas.
Data	Data of this DHCP option.

To add a DHCP option entry from scratch, clear the data entry fields (**Enable**, **Interface**, **Option Number**, **Data Type** and **Data**) by clicking Reset. After filling in the values, click **Add** to create the new entry.

To add a DHCP option entry modeled after an existing entry, click the model entry in **Customized List**. The data entry fields will be populated with values from the model entry. After making all necessary changes for the new entry, click **Add** to create it.

To modify an existing DHCP option entry, click on it in **Customized List**. The data entry fields will be populated with the current values from the entry. After making all necessary changes, click **Update** to save the changes.

To delete a DHCP option entry, click on it in **Customized List**, and then click **Delete**.

II-2-2 VLAN

Virtual Local Area Networks (VLANs) allow you to subdivide your LAN to facilitate management or to improve network security.

Select LAN>>VLAN from the menu bar of the Web UI to bring up the VLAN Configuration page.

Tagged VLAN

The tagged VLANs (802.1q) can mark data with a VLAN identifier. This identifier can be carried through an onward Ethernet switch to specific ports. The specific VLAN clients can also pick up this identifier as it is just passed to the LAN. You can set the priorities for LAN-side QoS. You can assign each of VLANs to each of the different IP subnets that the router may also be operating, to provide even more isolation. The said functionality is tag-based multi-subnet.

Port-Based VLAN

Relative to tag-based VLAN which groups clients with an identifier, port-based VLAN uses physical ports (P1 ~ P4) to separate the clients into different VLAN group.

Virtual LAN function provides you a very convenient way to manage hosts by grouping them based on the physical port. The multi-subnet can let a small businesses have much better isolation for multi-occupancy applications. Go to LAN page and select VLAN. The following page will appear. Click Enable to invoke VLAN function.

Below is an example page in Vigor2135ac:

LAN >> VLAN Configuration ?

VLAN Configuration

Enable

	LAN				Wireless LAN(2.4GHz)				Wireless LAN(5GHz)				VLAN Tag			
	P1	P2	P3	P4	SSID1	SSID2	SSID3	SSID4	SSID1	SSID2	SSID3	SSID4	Subnet	Enable	VID	Priority

Permit untagged device in P1 to access router

Note:

- For each VLAN row, selecting Enable VLAN Tag will apply the associated VID to the selected wired LAN port.
- Wireless LAN traffic is always untagged, but the SSID is still a member of the selected VLAN (group).
- Each VID must be unique.

Info

Settings in this page only applied to LAN port but not WAN port.

Available settings are explained as follows:

Item	Description
Enable	Enables or disables VLAN functionality.
VLAN0 to VLAN7	Virtual LANs.

LAN	P1 - P5 - Physical Ethernet ports on the router. Select the LAN port(s) to group them under the selected VLAN.
Wireless LAN (2.4GHz)	SSID1 - SSID4 - Select the SSID boxes to group them under the selected VLAN.
Wireless LAN (5GHz)	SSID1 - SSID4 - Select the SSID boxes to group them under the selected VLAN.
Subnet	Select a LAN subnet from LAN 1 to LAN 4 to make the selected VLAN mapping to the specified subnet only.
VLAN Tag	<p>Enable - Select to enable 802.1Q tagging on this VLAN.</p> <p>The router will add specific VLAN number to all packets on the LAN while sending them out.</p> <p>Please enter the tag value and specify the priority for the packets sending by LAN.</p> <p>VID - VLAN Identifier. Valid values are form 0 to 4095. VIDs must be unique.</p> <p>Priority - Valid values are from 0 to 7, where 1 has the lowest priority, followed by 0, and finally from 2 to 7 in increasing order of priority.</p>
Permit untagged device in P1 to access router	Select to allow untagged hosts connected to LAN port P1 to access the router. In case you have incorrectly configured VLAN functionality, you will still be able to access the router via the Web UI, and telnet and SSH shells to adjust the configuration.

Info

Leave one VLAN untagged at least to prevent from not connecting to Vigor router due to unexpected error.

Inter-LAN Routing

The Vigor router supports up to 7 VLANs. Each VLAN can be set up to use one or more of the Ethernet ports and wireless LAN Service Set Identifiers (SSIDs). Within the grid of VLANs (horizontal rows) and LAN interfaces (vertical columns),

- all hosts within the same VLAN (horizontal row) are visible to one another
- all hosts connected to the same LAN or WLAN interface (vertical column) are visible to one another if
 - they belong to the same VLAN, or
 - they belong to different VLANs, and inter-LAN routing (LAN>>General Setup) between them is enabled (see below).

LAN >> General Setup

LAN 1	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
LAN 2	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
LAN 3	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
LAN 4	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

OK

Inter-LAN Routing allows different LAN subnets to be interconnected or isolated. It is only available when the VLAN functionality is enabled. In the Inter-LAN Routing matrix, a selected checkbox means that the 2 intersecting LANs can communicate with each other.

Vigor2135 series features a hugely flexible VLAN system. In its simplest form, each of the Gigabit LAN ports can be isolated from each other, for example to feed different companies or departments but keeping their local traffic completely separated.

Configuring port-based VLAN for wireless and non-wireless clients

- All the wire network clients are categorized to group VLAN0 in subnet 192.168.1.0/24 (LAN1).
- All the wireless network clients are categorized to group VLAN1 in subnet 192.168.2.0/24 (LAN2).
- Open [LAN >> VLAN Configuration](#). Check the boxes according to the statement in step 1 and Step 2.

LAN >> VLAN Configuration

VLAN Configuration

	LAN				Wireless LAN(2.4GHz)				Wireless LAN(5GHz)				VLAN Tag

<input type="checkbox"/> IP Routed Subnet	192.168.0.1												
ARP Table	This table is the LAN ARP table of this router. The information for IP and MAC will be displayed in this field. Each pair of IP and MAC address listed in ARP table can be selected and added to IP Bind List by clicking Add below.												
Select All	Select all entries in the ARP Table for manipulation.												
Sort	Sort the entries in the ARP Table by IP address.												
Refresh	Refresh the screen to reflect the current state of the ARP table.												
Add or Update to IP Bind List	<p>IP Address – Enter the IP address to be associated with a MAC address.</p> <p>Mac Address – Enter the MAC address of the LAN client's network interface.</p> <p>Comment – Optional comment field to identify this IP Address – MAC Address pair.</p>												
Add	It allows you to add the one you choose from the ARP table or the IP/MAC address typed in Add and Edit to the table of IP Bind List .												
Update	It allows you to edit and modify the selected IP address and MAC address that you create before.												
Delete	You can remove any item listed in IP Bind List . Simply click and select the one, and click Delete . The selected item will be removed from the IP Bind List .												
IP Bind List	It displays a list for the IP bind to MAC information.												
Backup IP Bind List	Click Backup and enter a filename to back up IP Bind List to a file.												
Upload From File	Click Browse... to select an IP Bind List backup file. Click Restore to restore the backup and overwrite the existing list.												

Info

Before you select Strict Bind, you have to bind one set of IP/MAC address for one PC. If not, no one of the PCs can access into Internet. And the web user interface of the router might not be accessed.

When you finish the configuration, click **OK** to save the settings.

II-2-4 LAN Port Mirror

The LAN Port Mirror function allows network traffic of select LAN ports to be forwarded to another LAN port for analysis. This is useful for enforcing policies, detecting unauthorized access, monitoring network performance, etc.

Select LAN>>LAN Port Mirror from the menu bar of the Web UI to bring up the LAN Port Mirror configuration page.

LAN >> LAN Port Mirror

LAN Port Mirror

Port Mirror:					
<input checked="" type="radio"/> Enable <input type="radio"/> Disable					
	Port1	Port2	Port3	Port4	WAN1
Mirror Port		<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	
Mirrored Tx Port	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Mirrored Rx Port	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Note:

The mirrored WAN1 is a software mirror, it will lead to a substantial decline in performance.

OK

Available settings are explained as follows:

Item	Description
Port Mirror	Enables or disables LAN Port Mirroring.
Mirror Port	One and only one port is selected as the mirror port, to which traffic is to be forwarded.
Mirrored Tx Port	Port(s) whose outbound traffic will be forwarded to the mirror port.
Mirrored Rx Port	Port(s) whose inbound traffic will be forwarded to the mirror port.

After finishing all the settings here, please click OK to save the configuration.

II-2-5 Wired 802.1x

Wired 802.1X provides authentication for clients wishing to connect to the LAN by Ethernet. Only one client can be authenticated on each LAN port.

Select LAN>>Wired 802.1X from the menu bar of the Web UI to bring up the Wired 802.1X configuration page.

LAN >> Wired 802.1X

Wired 802.1X

LAN 802.1X:

Enable

802.1X ports:

P1

P2

P3

P4

Note:

802.1X enabled LAN ports only support a single attached device using EAPOL authentication. To authenticate multiple devices through a LAN port you need an 802.1X-capable switch. Then configure 802.1X on the attached switch instead.

OK

Available settings are explained as follows:

Item	Description
Enable	Check the box to enable LAN 802.1x function.
802.1X ports	802.1X authentication will be available for the selected LAN ports.

After finishing all the settings here, please click OK to save the configuration.

II-3 NAT

Most ISPs allocate one WAN IP address to each subscriber. In order to simultaneously connect multiple devices to the Internet, a technique called Network Address Translation is employed.

Usually, the router serves as an NAT (Network Address Translation) router. NAT is a mechanism that one or more private IP addresses can be mapped into a single public one. Public IP address is usually assigned by your ISP, for which you may get charged. Private IP addresses are recognized only among internal hosts.

When the outgoing packets destined to some public server on the Internet reach the NAT router, the router will change its source address into the public IP address of the router, select the available public port, and then forward it. At the same time, the router shall list an entry in a table to memorize this address/port-mapping relationship. When the public server response, the incoming traffic, of course, is destined to the router's public IP address and the router will do the inversion based on its table. Therefore, the internal host can communicate with external host smoothly.

The benefit of the NAT includes:

- **Save cost on applying public IP address and apply efficient usage of IP address.** NAT allows the internal IP addresses of local hosts to be translated into one public IP address, thus you can have only one IP address on behalf of the entire internal hosts.
- **Enhance security of the internal network by obscuring the IP address.** There are many attacks aiming victims based on the IP address. Since the attacker cannot be aware of any private IP addresses, the NAT function can protect the internal network.

Info

On NAT page, you will see the private IP address defined in RFC-1918. Usually we use the 192.168.1.0/24 subnet for the router. As stated before, the NAT facility can map one or more IP addresses and/or service ports into different specified services. In other words, the NAT function can be achieved by using port mapping methods.

Web User Interface

II-3-1 Port Redirection

Port Redirection is usually set up for server related service inside the local network (LAN), such as web servers, FTP servers, E-mail servers, etc. Most of the case, you need a public IP address for each server and this public IP address/domain name are recognized by all users. Since the server is actually located inside the LAN, the network well protected by NAT of the router, and identified by its private IP address/port, the goal of Port Redirection function is to forward all access request with a public IP address from external users to the mapping private IP address/port of the server.

That is, it allows a range of ports to be mapped to a port across a range of local IP addresses. For example, ports 80 through 89 (a total of 10 ports) can be mapped to port 80 LAN clients 192.168.1.20 through 192.168.1.29 (a total of 10 IP addresses). Henceforth all WAN-to-LAN traffic from ports 80 to 89 will be sent to the respective LAN clients.

The port redirection can only apply to incoming traffic.

To use this function, please go to NAT page and choose **Port Redirection** web page. The **Port Redirection Table** provides 40 port-mapping entries for the internal hosts.

NAT >> Port Redirection

---	---

Note:

The port number values set in this page might be invalid due to the same values configured for Management Port Setup in **System Maintenance>>Management, Open VPN and SSL VPN**.

Each item is explained as follows:

Item	Description
Index	Click to view and edit details of the rule.
Enable	Select to enable the port redirection rule.
Service Name	User-entered name that identifies the rule.
WAN Interface	WAN interface(s) to which this rule applies. A particular WAN interface or ALL interfaces.
Protocol	The protocol to which this rule applies, TCP or UDP.
Public Port	The port or range of WAN ports that is redirected by this rule.
Source IP	The IP object of the source IP.
Private IP	The LAN IP address(es) to which the traffic is redirected.
Backup	Click it to backup the configuration of port redirection settings.
Restore	Click it to restore the configuration of port redirection settings. Before clicking, make sure upload the configuration file onto Vigor router.

Press any number under Index to access into next page for configuring port redirection.

NAT >> Port Redirection

Index No. 1

<input type="checkbox"/> Enable

OK Clear Cancel

Available settings are explained as follows:

Item	Description
Enable	Select to enable the port redirection setting.
Mode	Allows a single port or a range of ports to be redirected. Single - redirects one single port. Range - redirects a contiguous range of ports.
Service Name	Enter the description of the specific network service.
Protocol	The protocol to which this rule applies, TCP or UDP.
WAN Interface	WAN interface(s) to which this rule applies. WAN # - Traffic from the selected WAN interface will be redirected. ALL - Traffic from all WAN interfaces will be redirected.
Public Port	Specify which port can be redirected to the specified Private IP and Port of the internal host. If you choose Range as the port redirection mode, you will see two boxes on this field. Enter the required number on the first box (as the starting port) and the second box (as the ending port).
Source IP	IP Object - Use the drop down list to specify an IP object profile. IP Group - Use the drop down list to specify an IP group profile.
Private IP	The LAN IP address or range of IP addresses to which the traffic is redirected. In the case of a range, only the beginning IP address needs to be entered. The ending IP address will automatically be derived from the number of public ports.
Private Port	The port on each LAN client to which the traffic will be directed to.

After finishing all the settings here, please click **OK** to save the configuration.

Note that the router has its own built-in services (servers) such as Telnet, HTTP and FTP etc. Since the common port numbers of these services (servers) are all the same, you may need to reset the router in order to avoid confliction.

For example, the built-in web user interface in the router is with default port 80, which may conflict with the web server in the local network, http://192.168.1.13:80. Therefore, you need to **change the router's http port to any one other than the default port 80** to avoid conflict, such as 8080. This can be set in the **System Maintenance >>Management Setup**. You then will access the admin screen of by suffixing the IP address with 8080, e.g., http://192.168.1.1:8080 instead of port 80.

II-3-2 DMZ Host

As mentioned above, **Port Redirection** can redirect incoming TCP/UDP or other traffic on particular ports to the specific private IP address/port of host in the LAN. However, other IP protocols, for example Protocols 50 (ESP) and 51 (AH), do not travel on a fixed port. Vigor router provides a facility **DMZ Host** that maps ALL unsolicited data on any protocol to a single host in the LAN. Regular web surfing and other such Internet activities from other clients will continue to work without inappropriate interruption. **DMZ Host** allows a defined internal user to be totally exposed to the Internet, which usually helps some special applications such as Netmeeting or Internet Games etc.

The security properties of NAT are somewhat bypassed if you set up DMZ host. We suggest you to add additional filter rules or a secondary firewall.

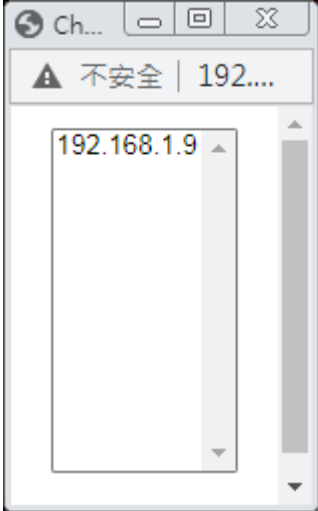

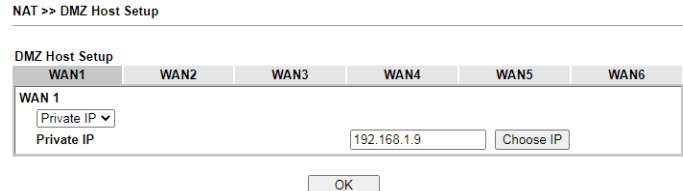

Click **DMZ Host** to open the following page. You can set different DMZ host for each WAN interface. Click the WAN tab to switch into the configuration page for that WAN.

NAT >> DMZ Host Setup

DMZ Host Setup

WAN1	WAN3
WAN1	
<input type="text" value="None"/>	
Private IP	<input type="text"/> <input type="button" value="Choose IP"/>

Available settings are explained as follows:

Item	Description
WAN 1	Enables or disables DMZ host.. None - Disables DMZ host function. Private IP - Allows WAN traffic to be sent to a specific LAN IP address.
Private IP	If Private IP mode has been selected, click the Choose IP button to select a LAN IP address.
Choose IP	Click this button and then a window will automatically pop up, as depicted below. The window consists of a list of private IP addresses of all hosts in your LAN network. Select one private IP address in the list to be the DMZ host.  When you have selected one private IP from the above dialog, the IP address will be shown on the following screen. Click OK to save the setting. 

DMZ Host for WAN3 is slightly different with WAN1. See the following figure.

NAT >> DMZ Host Setup

DMZ Host Setup

1.	<input type="checkbox"/>	---	0.0.0.0 Choose IP
2.	<input type="checkbox"/>	192.168.1.55	0.0.0.0 Choose IP

Available settings are explained as follows:

Item	Description
Enable	Check to enable the DMZ Host function.
Private IP	Enter the private IP address of the DMZ host, or click Choose PC to select one.
Choose IP	<p>Click this button and then a window will automatically pop up, as depicted below. The window consists of a list of private IP addresses of all hosts in your LAN network. Select one private IP address in the list to be the DMZ host.</p>  <p>When you have selected one private IP from the above dialog, the IP address will be shown on the screen. Click OK to save the setting.</p>

After finishing all the settings here, please click **OK** to save the configuration.

II-3-3 Open Ports

The Open Ports function allows inbound traffic from specific ports on WAN interfaces to be forwarded to LAN clients. Unlike Port Redirection, LAN client ports cannot be remapped and must remain identical to the opened ports on the WAN interface.

It allows you to open a range of ports for the traffic of special applications.

The common application of Open Ports includes P2P application (e.g., BT, KaZaA, Gnutella, WinMX, eMule, and others), Internet Camera, etc. Ensure that you keep the application involved up-to-date to avoid falling victim to any security exploits.

II-3-4 Port Triggering

If you run programs that function as server applications where they expect to receive unsolicited traffic from the WAN, you can set up rules in Port Triggering to detect LAN-to-WAN traffic initiated by those programs, and automatically open up WAN ports to accept incoming traffic and forward it to the LAN client running the server applications.

Port Triggering is a variation of open ports function.

The key difference between "open port" and "port triggering" is:

- Once the OK button is clicked and the configuration has taken effect, "open port" keeps the ports opened forever.
- Once the OK button is clicked and the configuration has taken effect, "port triggering" will only attempt to open the ports once the triggering conditions are met.
- The duration that these ports are opened depends on the type of protocol used. The "default" durations are shown below and these duration values can be modified via telnet commands.

TCP: 86400 sec.

UDP: 180 sec.

IGMP: 10 sec.

TCP WWW: 60 sec.

TCP SYN: 60 sec.

Note: The Triggering Port and Incoming Port should be input like this : 123-456,777-789 (legal),123-456,789 (legal), but 123-456-789 (illegal).	

OK Clear Cancel

Available settings are explained as follows:

Item	Description
Enable	Select to enable rule.
Service	Select from list of predefined service, or User Defined to manually configure triggering and incoming protocols and ports.
Comment	Enter the text to memorize the application of this rule.
Source IP	Any - Any IP can be used as the source IP. IP Object - Use the drop down list to specify an IP object profile. IP Group - Use the drop down list to specify an IP group profile.
Triggering Protocol	The protocol(s) of the outgoing traffic that this rule monitors. TCP - monitor only TCP traffic. UDP - monitor only UDP traffic. TCP/UDP - monitor both TCP and UDP traffic.
Triggering Port	Outgoing traffic destined for these port numbers will trigger the opening WAN ports to incoming traffic. Enter the port or port range for such triggering profile.
Incoming Protocol	The protocol(s) of the incoming traffic. TCP -open port(s) to TCP traffic. UDP - open port(s) to UDP traffic. TCP/UDP - open port(s) to both TCP and UDP traffic. Select the protocol (TCP, UDP or TCP/UDP) for the incoming data of such triggering profile.
Incoming Port	Incoming traffic from the WAN destined for these port numbers be forwarded to the LAN client that triggered the rule. Enter the port or port range for the incoming packets.

After finishing all the settings here, please click **OK** to save the configuration.

Open Port and Port Triggering Compared

Port Triggering	Open Port
Ports are opened when the triggering condition is met.	Ports are always open on the WAN interface. Opened ports will be closed after predefined durations have elapsed. Default duration values vary depending on the protocol and traffic content: <ul style="list-style-type: none"> ● TCP (all TCP ports, except those that pass HTTP and HTTPS traffic): 86400 seconds ● UDP: 180 seconds ● TCP WWW (TCP ports that engage in HTTP and HTTPS communication): 60 seconds ● TCP SYN: 60 seconds (SYN packets expire after 60 seconds) These values can be changed by using the command line interface (telnet or SSH).

II-3-5 ALG

ALG means **Application Layer Gateway**. There are two methods provided by Vigor router, RTSP (Real Time Streaming Protocol) ALG and SIP (Session Initiation Protocol) ALG, for processing the packets of voice and video.

RTSP ALG makes RTSP message, RTCP message, and RTP packets of voice and video be transmitted and received correctly via NAT by Vigor router.

However, SIP ALG makes SIP message and RTP packets of voice be transmitted and received correctly via NAT by Vigor router.

NAT >> ALG

ALG (Application Layer Gateway) | [Set to Factory Default](#) |

Enable ALG

<input type="checkbox"/> Enable	Protocol	Listen Port	TCP	UDP
<input type="checkbox"/>	SIP	<input type="text" value="5060"/> (1~65535)	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
<input type="checkbox"/>	RTSP	<input type="text" value="554"/> (1~65535)	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>

Available settings are explained as follows:

Item	Description
Enable ALG	Check to enable such function.
Listen Port	Type a port number for SIP or RTSP protocol.
TCP	Check the box to make correspond protocol message packet from TCP transmit and receive via NAT.
UDP	Check the box to make correspond protocol message packet from UDP transmit and receive via NAT.

II-4 Applications

Dynamic DNS

Most ISPs assigns dynamic WAN IP addresses to their customers. Dynamic IP addresses presents challenges to users who would like to accept remote connections to their LANs from the Internet, as service could be disrupted due to the IP address changing without notice. By setting up service with a Dynamic DNS (DDNS) provider, and configuring Dynamic DNS updates on the Vigor router, you can have reliable access to your network by means of an easy-to-remember domain address that resolves to the most current WAN IP address.

The Vigor router supports a wide range of DDNS providers, such as DynDNS, No-IP.com, DtdNS, and ChangeIP. Please contact the DDNS provider of your choice to set up service before configuring DDNS on the router.

LAN DNS / DNS Forwarding

LAN DNS allows the network administrator to override standard DNS resolutions for selecting domain addresses. The router will respond to queries on matched domain addresses with custom IP addresses.

DNS Forwarding allows the network administrator to forward DNS queries to different DNS servers based on the domain name.

LAN DNS and DNS Forwarding only affect DNS queries that are sent to the WAN through the router. DNS queries that are directed to a DNS server on the LAN will not be intercepted by the router.

Schedule

The Vigor router has a built-in clock which can update itself manually or automatically by means of Network Time Protocols (NTP). As a result, you can not only schedule the router to dialup to the Internet at a specified time, but also restrict Internet access to certain hours so that users can connect to the Internet only during certain hours, say, business hours. The schedule is also applicable to other functions.

RADIUS/TACACS+

Remote Authentication Dial-In User Service (RADIUS) is a security authentication client/server protocol that supports authentication, authorization and accounting, which is widely used by Internet service providers. It is the most common method of authenticating and authorizing dial-up and tunneled network users.

The built-in RADIUS client feature enables the router to assist the remote dial-in user or a wireless station and the RADIUS server in performing mutual authentication. It enables centralized remote access authentication for network management.

LDAP /Active Directory Setup

Lightweight Directory Access Protocol (LDAP) is a communication protocol for using in TCP/IP network. It defines the methods to access distributing directory server by clients, work on directory and share the information in the directory by clients. The LDAP standard is established by the work team of Internet Engineering Task Force (IETF).

As the name described, LDAP is designed as an effect way to access directory service without the complexity of other directory service protocols. For LDAP is defined to perform, inquire and modify the information within the directory, and acquire the data in the directory

securely, therefore users can apply LDAP to search or list the directory object, inquire or manage the active directory.

UPnP

The Vigor supports UPnP (Universal Plug and Play), which is a suite of network protocols that simplifies network configuration. Applications and network devices on the LAN, that support UPnP, may request the router to modify its settings to allow NAT Traversal, so that WAN hosts can connect to them directly.

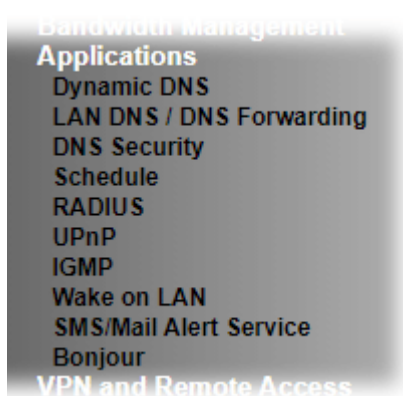

Examples of applications and devices that support UPnP include file-sharing applications such as uTorrent, Vuze and eMule, gaming consoles such as the Sony PlayStations 3 and 4 Xbox 360 and Xbox One, media streaming applications such as Plex and XBMC, and messaging and calling applications such as Skype. To find out if a certain application or network device supports or requires UPnP, please consult its user manual or check with its vendor.

Wake on LAN

Using the Wake on LAN (WoL) feature, LAN clients that support WoL can be powered on or resume from sleep over the network, without the need for physical access to the device.

In order for LAN clients to be able to woken from sleep or off states, the network interface card must be configured to monitor Wake-on-LAN messages. Consult the documentation of the LAN client for details on setting up its network interface for Wake on LAN.

Web User Interface

II-4-1 Dynamic DNS

Enable the Function and Add a Dynamic DNS Account

To begin configuring Dynamic DNS, from the main menu, navigate to **Applications**, and select **Dynamic DNS**. The Dynamic DNS main configuration screen appears:

Applications >> Dynamic DNS Setup

Dynamic DNS Setup | [Set to Factory Default](#) |

Enable Dynamic DNS Setup [View Log](#) [Force Update](#)

Auto-Update interval Min(s) (180~14400)

Accounts:

Determine WAN IP: WAN IP

OK Clear Cancel

Available settings are explained as follows:

Item	Description
Enable Dynamic DNS Account	Select to enable this DDNS profile.
WAN Interface	Select the WAN interface to monitor for IP address changes. WANx First - The specified WAN interface will be examined first. If it is online, its IP address will be used in the DDNS update. WANx Only - Only the specified WAN interface will be examined. If the WAN interface is online, its IP address will be used in the DDNS update. Otherwise no update will be

	performed for this DDNS profile.
Service Provider	<p>Select the DDNS provider. If your DDNS provider is not listed, select User-Defined and manually configure the profile.</p>  <ul style="list-style-type: none"> ● Provider Host - Enter the IP address or the domain name of the host which provides related service. Note that such option is available when Customized is selected as Service Provider. ● Service API - Enter the API information obtained from DDNS server. Note that such option is available when Customized is selected as Service Provider. (e.g: /dynamic/dns/update.asp?u=jo***&p=jo*****&hostname=j****.changeip.org&ip=###IP###&cmd=update&offline=0) ● Auth Type - Two types can be used for authentication. Basic - Username and password defined later can be shown from the packets captured. URL - Username and password defined later can be shown in URL. (e.g., http://ns1.vigorddns.com/ddns.php?username=xxx&password=xxx&domain=xxx.vigorddns.com) Note that such option is available when Customized is selected as Service Provider. ● Connection Type - There are two connection types (HTTP and HTTPS) to be specified. Note that such option is available when Customized is selected as Service Provider. ● Server Response - Type any text that you want to receive from the DDNS server. Note that such option is available when Customized is selected as Service Provider. <p>If other service provider is selected, you have to configure Service Type, Domain Name, Login Name and Password.</p> <ul style="list-style-type: none"> ● Service Type - Select the service type that matches that of your DynDNS account. If you are unsure which service type to select, try Dynamic first. This options is applicable to DynDNS only. ● Domain Name - The domain and subdomain to be updated.
Login Name	The login name of the DDNS account.
Password	The password of the DDNS account.
Wildcard and Backup MX	The Wildcard and Backup MX (Mail Exchange) features are not supported for all Dynamic DNS providers. You could get more detailed information from their websites.

Mail Extender	If the mail server is defined with another name, please enter the name in this area. Such mail server will be used as backup mail exchange.
Determine WAN IP	If a Vigor router is installed behind any NAT router, you can enable such function to locate the real WAN IP. When the WAN IP used by Vigor router is private IP, this function can detect the public IP used by the NAT router and use the detected IP address for DDNS update. There are two methods offered for you to choose: <ul style="list-style-type: none">● WAN IP - The IP address of the router's WAN interface will be used.● Internet IP - The real public IP address will be used. Select this option if the IP address assigned to the router's WAN interface is not the actual external IP address.

Click **OK** to save changes, **Clear** to clear all settings, or **Cancel** to discard changes and return to the main DDNS screen.

DrayDDNS Settings

DrayDDNS, a new DDNS service developed by DrayTek, can record multiple WAN IP (IPv4) on single domain name. It is convenient for users to use and easily to set up. Each Vigor Router is available to register one domain name.

Choose **DrayTek Global** as the service provider, the web page will be displayed as follows:

Applications >> Dynamic DNS Setup >> Dynamic DNS Account Setup

Index : 1

<input checked="" type="checkbox"/> Enable Dynamic DNS Account		
Service Provider	DrayDDNS (Global) ▼	Wizard View Log
Status	Inactivated	
Domain Name	Max: 54 characters drayddns.com	Sync domain
Determine WAN IP	WAN IP ▼ <input checked="" type="checkbox"/> IPv4 <input type="checkbox"/> IPv6	
WAN Interfaces	<input type="checkbox"/> WAN 1 <input type="checkbox"/> WAN 3 <input type="checkbox"/> Alias IP in Service Status Setup	
Connection Type	Http ▼	
Let's Encrypt certificate		
Status	Empty	Create
Auto Renew	<input type="checkbox"/>	

OK Clear Cancel

Available settings are explained as follows:

Item	Description
Enable Dynamic DNS Account	Check this box to enable the current account. If you did check the box, you will see a check mark appeared on the Active column of the previous web page in step 2).
Service Provider	Choose DrayTek Global as the service provider. Wizard - This button is available when DrayTek Global is selected as Service Provider. To activate the DrayTek's DDNS service, click it to enable license issued by DrayTek through Wizards>>Service Activation Wizard . Refer to section A-1 How to use DrayDDNS? for detailed information.
Status	Display if the license is actvtaed or not.
Determine WAN IP	If a Vigor router is installed behind any NAT router, you can enable such function to locate the real WAN IP. When the WAN IP used by Vigor router is private IP, this function can detect the public IP used by the NAT router and use the detected IP address for DDNS update. There are two methods offered for you to choose: <ul style="list-style-type: none"> ● WAN IP - If it is selected and the WAN IP of Vigor router is private, DDNS update will take place right away. ● Internet IP - If it is selected and the WAN IP of Vigor router is private, it will be converted to public IP before DDNS update takes place.
WAN Interfaces	WANx - While connecting, the router will use WANx as the channel for such account.
Let's Encrypt certificate	Create - Click it to generate a certificate issued by Let's Encrypt for applying to such DDNS account. Auto Update - Check the box to make the system update the certificate automatically.

Disable the Function and Clear all Dynamic DNS Accounts

Uncheck **Enable Dynamic DNS Setup**, and click **Clear All** button to disable the function and clear all accounts from the router.

Delete a Dynamic DNS Account

Click the **Index** number you want to delete and then click **Clear All** button to delete the account.

DDNS updates take place when:

- The router is powered on or rebooted.
- The public IP address of any WAN interface changes.
- The online status of a WAN interface changes (going from online to offline or vice versa).
- The DDNS function is changed from disabled to enabled.
- A DDNS entry is modified and enabled.
- The Auto-Update Interval has elapsed.

Procedures for Setting up a Dynamic DNS Entry

1. Contact the dynamic DNS provider of your choice and have service set up. Most DDNS providers accept signups on their websites. Service could be provided free of charge or for a fee.
2. Create a DDNS entry on the router by selecting the appropriate DDNS provider and enter the account information.
3. Make sure that both the DDNS entry and the DDNS feature are enabled on the router.
4. Click the **View Log** button on the DDNS main page to bring up the update log.
5. Examine the update log to make sure the update was successful.
6. If the update was not successful, verify the DDNS entry to make sure the settings are entered correctly.

II-4-2 LAN DNS / DNS Forwarding

LAN DNS lets the network administrators host servers with privacy and security. When the network administrators of your office set up FTP, Mail or Web server inside LAN, you can specify specific private IP address (es) to correspondent servers. Thus, even the remote PC is adopting public DNS as the DNS server, the LAN DNS resolution on Vigor2135 series will respond the specified private IP address.

To start configuring LAN DNS or DNS Forwarding, from the main menu, click **Applications**, followed by **LAN DNS / DNS Forwarding**.

Applications >> LAN DNS / DNS Forwarding

LAN DNS Resolution / Conditional DNS Forwarding

[Set to Factory Default](#)

Index	Enable	Profile	Domain Name	Forwarding	DNS Server

OK

Each item is explained as follows:

Item	Description
Set to Factory Default	Click to clear all profiles to factory settings.

Index	Click to bring up the configuration page for the profile.
Enable	Select to enable this profile.
Profile	Shows the name of the profile.
Domain Name	Shows the domain name configured for the profile.
Forwarding	V - DNS queries for the specified domain name will be forwarded to the specified server. - DNS queries for the specified domain name will not be forwarded.
DNS Server	DNS server to which DNS queries for the specified domain name will be forwarded.

To configure a LAN DNS profile, click on its index to bring up the configuration page.

Applications >> LAN DNS / DNS Forwarding

LAN DNS Conditional DNS Forwarding

Profile Index : 1

Enable

Profile:

Domain Name:

Note:
1. Support wildcard subdomain, ex: *.example.com or www.example.*
2. One domain Name has only one IPv4 address and IPv6 address in the same subnet.

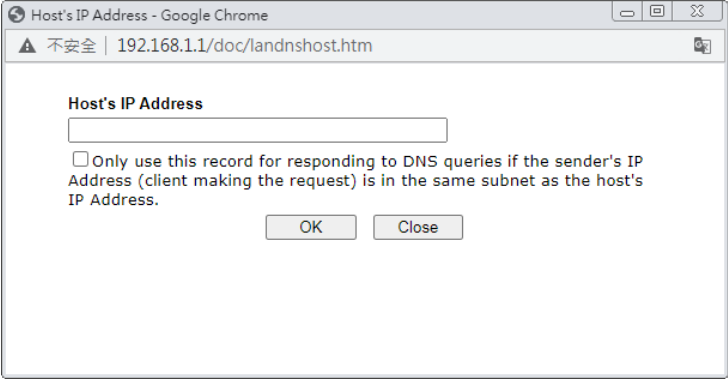

CNAME(Alias Domain Name):

IP Address List (Max. 40 entries)

Index	IP Address	Same Subnet Reply

Available settings are explained as follows:

Item	Description
Enable	Select to enable this profile.
Profile	Enter a name to identify this profile. Note: If you type a name here for LAN DNS and click OK to save the configuration, the name also will be applied to conditional DNS forwarding automatically.
Domain Name	Enter the domain name for the router to look for in DNS queries to intercept and reply to. Wildcards in the form of asterisks (*) can be used to match a domain level. For example, *.draytek.com will match domain names such as www.draytek.com and ftp.draytek.com, whereas www.draytek.* will match domain names such as www.draytek.com and www.draytek.co.uk.

CNAME	Click Add to add a domain name alias for the domain name. Click Delete next to an alias entry to delete it.
IP Address List	<p>The IP address listed here will be used for mapping with the domain name specified above. In general, one domain name maps with one IP address. If required, you can configure two IP addresses mapping with the same domain name.</p> <p>Add - Click Add to bring up the Add IP Address dialog box:</p>  <ul style="list-style-type: none"> ● Host's IP Address - Enter the IP address to be returned in response to a DNS query for the configured domain names and aliases. ● Only use this record... - Select to use this IP address only if the IP address of the source of the DNS query belongs to the same subnet as the host IP address entered above. <p>After changes have been made, click OK to save and dismiss the dialog box, or Close to discard the changes and dismiss the dialog box.</p> <p>Delete -To delete an IP address, click on it and then click Delete.</p>

To save changes made to the LAN DNS profile, click **OK**. To clear the profile and restore the factory default blank values, click **Clear**.

If you need to configure LAN DNS settings, click index 1 to edit the LAN DNS profile just created. Or, you can click index 2 to use this profile as conditional DNS forwarding.

Applications >> LAN DNS / DNS Forwarding

LAN DNS
Conditional DNS Forwarding

Profile Index : 1

Enable

Profile:

Domain Name:

Note:
Support wildcard subdomain, ex: *.example.com

DNS Server IP Address:

Available settings are explained as follows:

Item	Description
Enable	Check this box to enable such profile.
Profile	Type a name for such profile. Note: If you type a name here for conditional DNS forwarding and click OK to save the configuration, the name also will be applied to LAN DNS automatically.
Domain Name	Enter the domain name for such profile.
DNS Server IP Address	Enter the IP address of the DNS server you want to use for DNS forwarding.

To save changes made to the LAN DNS profile, click **OK**. To clear the profile and restore the factory default blank values, click **Clear**.

II-4-3 DNS Security

Domain Name System Security Extensions (DNSSEC) protects against DNS-based attacks by authenticating DNS responses from DNS resolvers.

The DNS servers must support DNS security validation for the feature to function properly.

To configure DNS security, from the main menu, click **Applications**, followed by **DNS Security**.

II-4-3-1 General Setup

All of WAN interfaces of Vigor router can be configured with DNS Security enabled respectively.

Application >> DNS Security

DNS Security

General Setup		Domain Diagnosis		Refresh
Interface	Enable	Primary DNS	Secondary DNS	Bogus DNS Reply
WAN1	<input type="checkbox"/>	---	---	Pass ▼
WAN3	<input type="checkbox"/>	---	---	Pass ▼

Note:

The DNS server supports DNSSEC

The DNS server does not support DNSSEC, function may not work as expected even if it is enabled

OK

Available settings are explained as follows:

Item	Description
Interface	The WAN interface name for which DNS security is to be configured.
Enable	Select to enable DNS security for this WAN Interface.
Primary DNS	Shows the primary DNS server IP address in effect for this WAN.
Secondary DNS	Shows the secondary DNS server IP address in effect for this WAN.
Bogus DNS Reply	Show action to be taken for DNS responses that fail authentication. Choose Pass or Drop. Pass - Pass DNS result. Drop - Do not pass DNS result.

Press OK to save changes.

II-4-3-2 Domain Diagnose

While using the Domain Diagnose feature, you can check to see if the router's DNS security function is working properly, or whether a given domain is secured by DNS security. Note that DNS Security has to be first enabled or the test results would not be meaningful.

Application >> DNS Security

DNS Security

General Setup
Domain Diagnosis
DNS Cache

Domain: IPv4 IPv6

Interface:

DNS Server:

Note:
If the domain has not been queried before, it will take a few seconds to process.

Result | [Clear](#) |

Domain Name	IP Address	Interface	Verify Result

Available settings are explained as follows:

Item	Description
Domain	Enter domain address to be diagnosed. Select the type of IP address to be looked up. IPv4 - looks up A records. IPv6 - looks up AAAA records.
Interface	Select the WAN port to be used for the lookup.
DNS Server	Enter the IPv4 address of the DNS server to be used for the lookup.
Diagnose	Click to begin DNS lookup.
Result	The history of domain diagnosis is shown in the Result panel.

Frequency	Shows the days of the week configured for the schedule. Selected days are shown in dark grey. ● - If it lights in green, it means such schedule is active.
-----------	---

To configure a schedule, click on its index to bring up the settings page.

Applications >> Schedule

Index No. 1 Current System Time 2000 Jan 1 Sat 3 : 27 : 41 | System time set |

Enable Schedule Setup

Comment

Start Date (yyyy-mm-dd) --

Start Time (hh:mm) :

Duration Time (hh:mm) :

End Time (hh:mm) :

Action

How Often

Once

Weekdays

Sun Mon Tue Wed Thu Fri Sat

Monthly, on date

Cycle duration: days (Cycle will start on the Start Date.)

Note:

Comment can only contain A-Z a-z 0-9 , . { } - _ () ^ \$! ~ ` |

Available settings are explained as follows:

Item	Description
Enable Schedule Setup	Select to enable the schedule; clear to disable it.
Comment	Name to identify this schedule entry.
Start Date (yyyy-mm-dd)	The date when the entry comes into effect.
Start Time (hh:mm)	The time when the schedule is triggered. See the How Often setting below for details.
Duration Time (hh:mm)	How long the action lasts when the scheduled is triggered.
End Time (hh:mm)	It will be calculated automatically when Start Time and Duration Time are configured well.
Action	Action to take when the schedule is triggered. Force On - The feature with which this schedule is associated will be turned on. Force Down - The feature with which this schedule is associated will be turned off.
How Often	How frequently the schedule is triggered. <ul style="list-style-type: none"> ● Once - The schedule is triggered once, on the Start Date at the Start Time, for the Duration Time. ● Weekdays - The schedule will be triggered repeatedly, starting on the Start Date at the Start Time, on the selected days of the week, at the Start Time, for the Duration Time.

- **Monthly, on date** - The router will only execute the action applied such schedule on the date (1 to 28) of a month.
- **Cycle duration** - Type a number as cycle duration. Then, any action applied such schedule will be executed per several days. For example, "3" is selected as cycle duration. That means, the action applied such schedule will be executed every three days since the date defined on the Start Date.

To save changes made to the Schedule, click **OK**. To clear the schedule and restore the factory default blank values, click **Clear**. To cancel the changes and return to the main Schedule page, click **Cancel**.

Example

Suppose you want to control the PPPoE Internet access connection to be always on (Force On) from 9:00 to 18:00 for whole week. Other time the Internet access connection should be disconnected (Force Down).

Office
Hour:
(Force On)

Mon - Sun 9:00 am to 6:00 pm

1. Make sure the PPPoE connection and **Time Setup** is working properly.
2. Configure the PPPoE always on from 9:00 to 18:00 for whole week.
3. Configure the **Force Down** from 18:00 to next day 9:00 for whole week.
4. Assign these two profiles to the PPPoE Internet access profile. Now, the PPPoE Internet connection will follow the schedule order to perform **Force On** or **Force Down** action according to the time plan that has been pre-defined in the schedule profiles.

II-4-5 RADIUS

Remote Authentication Dial-In User Service (RADIUS) is a security authentication client/server protocol that supports authentication, authorization and accounting, which is widely used by Internet service providers. It is the most common method of authenticating and authorizing dial-up and tunneled network users.

The built-in RADIUS client feature enables the router to assist the remote dial-in user or a wireless station and the RADIUS server in performing mutual authentication. It enables centralized remote access authentication for network management.

Vigor router can be operated as a RADIUS client. This web page is used to configure settings for external RADIUS server. Then LAN users of Vigor router will be authenticated and accounted by such server for network application.

RADIUS Server Status Log

[Refresh](#) | [Clear](#) |

Available settings are explained as follows:

Item	Description
Enable	Check to enable RADIUS client profile. Comments - Enter a brief description for this profile.
Primary Server	<p>Primary Server - Enter the IP address of RADIUS server.</p> <p>Secret - The RADIUS server and client share a secret that is used to authenticate the messages sent between them. Both sides must be configured to use the same shared secret. The maximum length of the shared secret you can set is 36 characters.</p> <p>Authentication Port - The UDP port number that the RADIUS server is using. The default value is 1812, based on RFC 2138.</p> <p>Retry - Set the number of attempts to perform reconnection with RADIUS server. If the connection (with the Primary</p>

	Server) still fails, stop the connection attempt and begin to make connection with the secondary server.
Secondary Server	<p>Secondary Server - Enter the IP address of RADIUS server.</p> <p>Secret - The RADIUS server and client share a secret that is used to authenticate the messages sent between them. Both sides must be configured to use the same shared secret. The maximum length of the shared secret you can set is 36 characters.</p> <p>Authentication Port - The UDP port number that the RADIUS server is using. The default value is 1812, based on RFC 2138.</p> <p>Retry - Set the number of attempts to perform reconnection. If the connection (with the Secondary Server) still fails, stop the connection attempt. The client authentication would be determined as "failed".</p>
RADIUS Server Status Log	Display the record of current status of RADIUS server.

To save changes on the page, click **OK**. To discard changes, click **Cancel**. To reset all settings to blank, click **Clear**.

II-4-6 UPnP

To configure UPnP settings, from the Main Menu select **Applications >> UPnP**.

Applications >> UPnP

UPnP

<input type="checkbox"/> Enable UPnP Service	<input type="checkbox"/> Enable Connection Control Service	Default WAN ▾
<input type="checkbox"/> Enable Connection Status Service		Default WAN
		WAN1
		WAN3

Note:

To allow NAT pass-through to a UPnP enabled client the connection control service must also be enabled.

Available settings are explained as follows:

Item	Description
Enable UPnP Service	Select to enable UPnP.
Default WAN	Select the WAN port on which ports will be opened in response to UPnP commands.
Enable Connection Control Service	Select to enable the connection control service.
Enable Connection Status Service	Select to enable the connection status service.

To save changes on the page, select **OK**; to discard changes, select **Cancel**; to revert all settings to the factory default, select **Clear**.

The reminder as regards concern about Firewall and UPnP:

Can't work with Firewall Software

Enabling firewall applications on your PC may cause the UPnP function not working properly. This is because these applications will block the accessing ability of some network ports.

Security Considerations

Activating UPnP allows any application or network devices to open ports on the WAN side to allow connections to the LAN, which could compromise network security. Also if UPnP applications or network devices malfunction or terminate abnormally, the opened ports may remain open indefinitely, and thus increasing the chance of it getting exploited by malicious parties.

If you do not have applications or network devices which requires UPnP, you are advised to disable UPnP.

Info

UPnP is required for some applications such as PPS, Skype, eMule... and etc. If you are not familiar with UPnP, it is suggested to turn off this function for security.

II-4-7 IGMP

Internet Group Management Protocol (IGMP) is an IPv4 communication protocol for establishing multicast group memberships.

To configure IGMP settings, from the Main Menu select **Applications >> IGMP**.

II-4-7-1 General Setting

Applications >> IGMP

General setting	Working status
<input type="checkbox"/> IGMP Proxy IGMP Proxy acts as a multicast proxy for hosts on the LAN side. Enable IGMP proxy to access any multicast group. This function takes no effect when Bridge Mode is enabled.	
Interface	WAN1
IGMP version	Auto
General Query Interval	125 (seconds)
Add PPP header (Encapsulate IGMP in PPPoE)	<input type="checkbox"/>
Enable IGMP syslog	<input type="checkbox"/>
<input type="checkbox"/> IGMP Snooping Enable: Forwards multicast traffic only to ports that are members of that group. Disable: Treats multicast traffic the same as broadcast traffic.	
<input type="checkbox"/> IGMP Fast Leave The router stops forwarding multicast traffic to a LAN port as soon as it receives a leave message from that port. Each LAN port should have no more than one IGMP host connected.	
IGMP Accept List	Any
Only allow the IP of the LAN device to be included in the specified object/group to use IGMP.	
<input type="button" value="OK"/> <input type="button" value="Cancel"/>	

Available settings are explained as follows:

Item	Description
IGMP Proxy	<p>Check this box to enable this function. The application of multicast will be executed through WAN /PVC/VLAN port. In addition, such function is available in NAT mode.</p> <p>Interface - Specify an interface for packets passing through.</p> <p>IGMP version - At present, two versions (v2 and v3) are supported by Vigor router. Choose the correct version based on the IPTV service you subscribe.</p> <p>General Query Interval - Vigor router will periodically check which IP obtaining IPTV service by sending query. It might cause inconvenience for client. Therefore, set a suitable time (unit: second) as the query interval to limit the frequency of query sent by Vigor router.</p> <p>Add PPP header - Check this box if the interface type for IGMP is PPPoE. It depends on the specifications regulated by each ISP. If you have no idea to enable or disable, simply contact your ISP providers.</p> <p>Enable IGMP syslog - Check the box to store the IGMP status onto Syslog.</p>

IGMP Snooping	<p>Select to enable IGMP Snooping so that multicast traffic are forwarded to IGMP clients that have joined a multicast group.</p> <p>IGMP Fast Leave - This option is shown only when IGMP Snooping is enabled. Select to enable IGMP Fast Leave. Normally when the router receives a "leave" message from an IGMP host, it will send a last member query message to see if there are still members within the multicast group. When Fast Leave is enabled, multicast for a group is immediately terminated when the last host in that group sends a "leave" message.</p> <p>IGMP Accept List - Only the device with the IP address specified here is able to use IGMP.</p>
----------------------	---

To save changes on the page, select **OK**; to discard changes, select **Cancel**.

II-4-7-2 Working Group

Displays a list of active multicast groups.

Applications >> IGMP

IGMP Device Table

Index	MAC Address	IP Address	Interface	IGMP Version

Available settings are explained as follows:

Item	Description
Refresh	Click to reload the Multicast Group Table with the latest information.
Index	Index number of the multicast group.
Group ID	ID port of the multicast group, which is within the IP range reserved for IGMP, 224.0.0.0 through 239.255.255.254.
P1 to P4	LAN ports that have IGMP hosts joined to this multicast group.

II-4-8 Wake on LAN

Using the Wake on LAN (WoL) feature, LAN clients that support WoL can be powered on or resume from sleep over the network, without the need for physical access to the device.

In order for LAN clients to be able to wake from sleep or off states, the network interface card must be configured to monitor Wake-on-LAN messages. Consult the documentation of the LAN client for details on setting up its network interface for Wake on LAN.

If you wish to be able to select the IP address of the Wake-on-LAN client, its MAC address must first be bound to a static IP address using the Bind IP to MAC function.

To configure Wake on LAN settings, from the Main Menu select **Applications >> Wake on LAN**.

Applications >> Wake on LAN

Wake on LAN

Note:

Wake on LAN integrates with **Bind IP to MAC** function; only bound PCs can wake up through IP.

Available settings are explained as follows:

Item	Description
Wake by	The type of address of the LAN client to be woken up. <ul style="list-style-type: none"> ● If you choose Wake by MAC Address, you have to Enter the correct MAC address of the host in MAC Address boxes. ● If you choose Wake by IP Address, you have to choose the correct IP address.
IP Address	The IP addresses that have been configured in Firewall>>Bind IP to MAC will be shown in this drop down list. Select the IP address of the LAN client.
MAC Address	Enter the MAC address of the LAN client.
Wake Up	Click to send Wake-on-LAN message to the specified LAN client.
Result	Result of the transmission of the Wake-on-LAN message.

II-4-9 SMS / Mail Alert Service

You can set up SMS or mail profiles for the router to send events or alerts to designated recipients. Up to 10 SMS profiles and 10 mail profiles can be configured.

II-4-9-1 SMS Alert

To configure SMS alert profiles, select the SMS Alert tab.

Applications >> SMS / Mail Alert Service

SMS Alert		Mail Alert		Set to Factory Default		
Index	Enable	SMS Provider	Recipient Number	Notify Profile	Schedule(1-15)	
1	<input type="checkbox"/>	1 - ???		1 - ???	None	None
2	<input type="checkbox"/>	1 - ???		1 - ???	None	None
3	<input type="checkbox"/>	1 - ???		1 - ???	None	None
4	<input type="checkbox"/>	1 - ???		1 - ???	None	None
5	<input type="checkbox"/>	1 - ???		1 - ???	None	None
6	<input type="checkbox"/>	1 - ???		1 - ???	None	None
7	<input type="checkbox"/>	1 - ???		1 - ???	None	None
8	<input type="checkbox"/>	1 - ???		1 - ???	None	None
9	<input type="checkbox"/>	1 - ???		1 - ???	None	None
10	<input type="checkbox"/>	1 - ???		1 - ???	None	None

Note:

All the SMS Alert profiles share the same "Sending Interval" setting if they use the same SMS Provider.

Available settings are explained as follows:

Item	Description
Set to Factory Default	Click to clear all SMS alert profiles.
Enable	Select the checkbox to enable the profile.
SMS Provider	Select the profile of the SMS provider to be used. To set up or modify SMS provider profiles, click the hyperlink SMS Provider to go to Objects Setting >> SMS/Mail Service Object.
Recipient Number	Enter the recipient's SMS number.
Notify Profile	Select the notification profile to be used. To set up or modify notification object profiles, click the hyperlink Notify Profile to go to Objects Setting >> Notification Object.
Schedule (1-15)	Enter up to 2 schedule profile indexes. To set up or modify schedule profiles, click the hyperlink Schedule(1-15) to go to Applications >> Schedule.

After finishing all the settings here, please click **OK** to save the configuration.

II-4-9-2 Mail Alert

To configure mail alert profiles, select the SMS Alert tab.

Application >> SMS / Mail Alert Service

SMS Alert		Mail Alert				Set to Factory Default	
Index	Enable	Mail Service	Mail Address	Notify Profile	Schedule(1-15)		
1	<input type="checkbox"/>	1 - ??? ▾		1 - ??? ▾	None ▾	None ▾	
2	<input type="checkbox"/>	1 - ??? ▾		1 - ??? ▾	None ▾	None ▾	
3	<input type="checkbox"/>	1 - ??? ▾		1 - ??? ▾	None ▾	None ▾	
4	<input type="checkbox"/>	1 - ??? ▾		1 - ??? ▾	None ▾	None ▾	
5	<input type="checkbox"/>	1 - ??? ▾		1 - ??? ▾	None ▾	None ▾	
6	<input type="checkbox"/>	1 - ??? ▾		1 - ??? ▾	None ▾	None ▾	
7	<input type="checkbox"/>	1 - ??? ▾		1 - ??? ▾	None ▾	None ▾	
8	<input type="checkbox"/>	1 - ??? ▾		1 - ??? ▾	None ▾	None ▾	
9	<input type="checkbox"/>	1 - ??? ▾		1 - ??? ▾	None ▾	None ▾	
10	<input type="checkbox"/>	1 - ??? ▾		1 - ??? ▾	None ▾	None ▾	

Note:

All the Mail Alert profiles share the same "Sending Interval" setting if they use the same Mail Server.

Available settings are explained as follows:

Item	Description
Set to Factory Default	Click to clear all mail alert profiles.
Enable	Select the checkbox to enable the profile.
Mail Service	Select the profile of the mail provider to be used. To set up or modify a mail provider profile, click the hyperlink Mail Service to go to Objects Setting >> SMS/Mail Service Object.
Mail Address	Enter the recipient's email address.
Notify Profile	Select the notification profile to be used. To set up or modify a notification object profile, click the hyperlink Notify Profile to go to Objects Setting >> Notification Object.
Schedule (1-15)	Enter up to 2 schedule profile indexes. To set up or modify schedule profiles, click the hyperlink Schedule(1-15) to go to Applications >> Schedule.

After finishing all the settings here, please click **OK** to save the configuration.

II-4-10 Bonjour

Bonjour is Apple's implementation of zero-configuration networking (Zeroconf), a technology that allows automatic discovery and configuration of network devices and services. Bonjour is built into OS X, and versions for Windows PCs can be downloaded without charge from Apple's website.

Without Bonjour, routers, computers, and other network peripherals would require manual configuration of network settings such as IP addresses and port numbers, which could be complex and cumbersome. By enabling Bonjour on the Vigor router, users only need to know the name of the router in order to set up connectivity between LAN devices, and the router and the peripherals that are connected to it.

To enable the Bonjour service, click **Application>>Bonjour** to open the following page. Check the box(es) of the server service(s) that you want to share to the LAN clients.

Applications >> Bonjour 

Bonjour Setup

Enable Bonjour Service

- HTTP Server
- Telnet Server
- FTP Server
- SSH Server
- LPR Printer Server

Available settings are explained as follows:

Item	Description
Enable Bonjour Service	Select to enable the Bonjour service on the router. The rest of the checkboxes will be enabled for selection when this checkbox has been selected.
HTTP Server	Select to allow the router's HTTP server to be discovered via Bonjour.
Telnet Server	Select to allow the router's telnet server to be discovered via Bonjour.
FTP Server	Select to allow the router's FTP server to be discovered via Bonjour.
SSH Server	Select to allow the router's SSH server to be discovered via Bonjour.
LPR Print Server	Select to allow the router's LPR server to be discovered via Bonjour. This allows printers attached to the router's USB ports to be discovered.

Below shows an example for applying the Bonjour feature that Vigor router can be used as the FTP server.

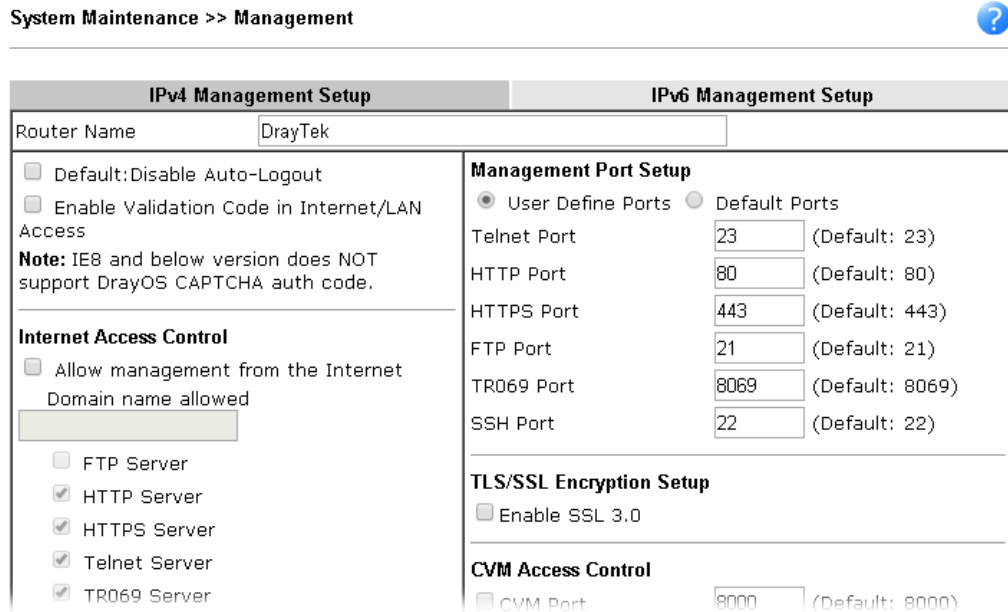

1. Here, we use Firefox and DNSSD to discover the service in such case. Therefore, just ensure the Bonjour client program and DNSSD for Firefox have been installed on the computer.

- Open the web browser, Firefox. If Bonjour and DNSSD have been installed, you can open the web page (DNSSD) and see the following results.

- Open **System Maintenance >> Management**. Type a name as the Router Name and click **OK**.

- Next, open **Applications >> Bonjour**. Check the service that you want to use via Bonjour.

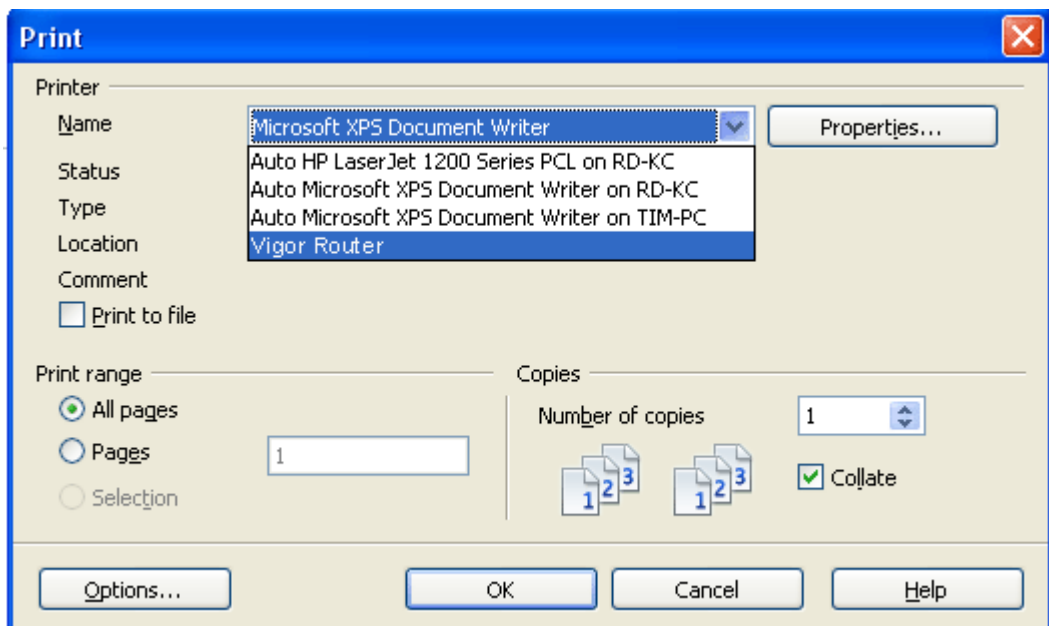

5. Open the DNSSD page again. The available items will be changed as the follows. It means the Vigor router (based on Bonjour protocol) is ready to be used as a printer server, FTP server, SSH Server, Telnet Server, and HTTP Server.

DNSSD for Firefox

Interface	Name	Type	Domain	Service Info
2	DS1010Plus	_http._tcp.	local.	Select a service on the left to view further details.
2	DS1010Plus(WebDAV)	_http._tcp.	local.	
2	HP LaserJet 1300	_ipp._tcp.	local.	
2	Vigor Router	_ftp._tcp.	local.	
2	Vigor Router	_http._tcp.	local.	
2	Vigor Router	_printer._tcp.	local.	
2	Vigor Router	_ssh._tcp.	local.	
2	Vigor Router	_telnet._tcp.	local.	
2	tcseng-virtual-machine	_udisks-ssh._tcp.	local.	
2	tcseng-virtual-machine [00:0c:29:78:bc:24]	_workstation._tcp.	local.	
2	tomkao-desktop [00:0c:29:26:09:5d]	_workstation._tcp.	local.	

6. Now, any page or document can be printed out through Vigor router (installed with a printer).

Application Notes

A-1 How to use DrayDDNS?

Vigor router supports various DDNS service providers, user can set up user-defined profile to update the DDNS even the service provider is not on the list. Now, DrayTek starts to support our own DDNS service - DrayDDNS. We will provide a domain name for each Vigor Router, this single domain name can record IP addresses of all WAN.

Activate DrayDDNS License

1. Go to **Wizards >> Service Activation Wizard**, wait for the router to connect to MyVigor server, then tick **DT-DDNS** and **I have read and accept the above Agreement**, click **Next**.

Service Activation Wizard

Select the service type that you want to activate

Activation Date : 2017-02-23

Web Content Filter(WCF) Service :

BPJM [License Agreement](#)
This is a web content filter that is provided by the German government. It is a free service without any guarantee and will expire one year after activation. You may re-activate the service after expiry.

Cyren 30-Days Free Trial [License Agreement](#)
This is a worldwide web content filter service. The free trail license can only be used once. At the end of the free trail period you may purchase the official one-year Cyren Web Content Filter from an authorized DrayTek reseller.

APP Enforcement(APPE) Service :

DT-APPE [License Agreement](#)
Upgrade APPE Signature automatically.

Dynamic DNS(DDNS) Service :

DT-DDNS [License Agreement](#)
This is a Dynamic Domain Name Service that is provided by DrayTek company. It is a free service will expire 1 year after activation. You may re-activate the service after expiry.
Domain Name : .drayddns.com
*** Please note that the DrayDDNS service is currently for internal use only.**

I have read and accept the above Agreement. (Please check this box).

2. Confirm the information, then click **Activate**.

Service Activation Wizard

Please confirm your settings

Service Type : Trial version
Service Activated : Dynamic DNS (.drayddns.com)

Please click **Back** to re-select service type you to activate.

- MyVigor server will reply with the service activation information.

DrayTek Service Activation

Service Name	Start Date	Expire Date	Status
Web Content filter	---	---	Not Activated
APP Enforcement	---	---	Not Activated
DDNS	2017-02-23	2018-02-23	DT-DDNS

Please check if the license fits with the service provider of your signature. To ensure normal operation for your router, update your signature again is recommended.

Configure DDNS Profile

- Go to Applications >> Dynamic DNS Setup,
 - Tick Enable Dynamic DNS Setup
 - Click an available profile index
 - Tick Enable Dynamic DNS Account
 - Select DrayTek Global (www.drayddns.com) as Service Provider
 - Select the WAN you would like to upload the IP to DDNS server
 - Click Get domain
 - Click OK on the pop up notification window

Applications >> Dynamic DNS Setup

Dynamic DNS Setup | Set to Factory Default |

A-2 How to Configure Customized DDNS?

This article describes how to configure customized DDNS on Vigor routers to update your IP to the DDNS server. We will take "Changeip.org" and "3322.net" as example. Before setting, please make sure that the WAN connection is up.

Part A : Changeip.org

Physical Connection			System Uptime: 0day 2:25:59		
IPv4		IPv6			
LAN Status		Primary DNS: 168.95.192.1		Secondary DNS: 168.95.1.1	
IP Address	TX Packets	RX Packets			
10.1.7.1	2069	1036			
WAN 1 Status >> Drop PPPoE					
Enable	Line	Name	Mode	Up Time	
Yes	Ethernet	iwiz	PPPoE	2:25:53	
IP	GW IP	TX Packets	TX Rate(Bps)	RX Packets	RX Rate(Bps)
1.169.185.242	168.95.98.254	14851	9506	11281	912

Note that,

Username: jo***

Password: jo*****

Host name: j****.changeip.org

WAN IP address: 1.169.185.242

Following is the screenshot of editing the HTML script on the browser to update your IP to the DDNS server.

```
← → ↻ www.changeip.com/dynamic/dns/update.asp?u=jo...&p=jo...&host...
免費的 Hotmail 建議的網站 Home Page 網頁快訊圖庫 從 IE 匯入 Go

200 Successful Update (Address Used: 1.169.185.242)

Updated target: j...changeip.org
Updated 1 host records
Updated 0 zone serial numbers
Reviewed 1 possible records
Total updates: 75
Lockout counter: 1 out of 60
Lockout reset: 60 mins
Elapsed time: 0.01 seconds
NIC version: 2.68

For XML output add &xml=1
Use SSL for better security.
```

Now we have to configure the router so it can do the same job for us automatically.

1. Please go to **Applications >> Dynamic DNS** to create a profile for customized DDNS client.

Applications >> Dynamic DNS Setup >> Dynamic DNS Account Setup

Index : 1

Enable Dynamic DNS Account

WAN Interface:

Service Provider:

Provider Host:

Service API:

Auth Type:

Connection Type:

Server Response:

Login Name: (max. 64 characters)

Password: (max. 23 characters)

Wildcards

Backup MX

Mail Extender:

Determine Real WAN IP:

2. Set the Service Provider as **User-Defined**.
3. Set the Service API as:
 /dynamic/dns/update.asp?u=jo***&p=jo*****&hostname=j****.changeip.org&ip=###IP###&cmd=update&offline=0

In which, ###IP### is a value which will be replaced with the current interface IP address automatically when DDNS service is running. In this case the IP will be 1.169.185.242.

4. After setting, the Customized DDNS service will be up, and our IP will be updated to the DDNS server.

Part B : 3322.net

WAN 1	
Link Status	: Connected
MAC Address	: 00-50-7F-C8-C6-A1
Connection	: PPPoE
IP Address	: 111.243.178.53
Default Gateway	: 168.95.98.254
Primary DNS	: 168.95.192.1
Secondary DNS	: 168.95.1.1

Username: bi*****
 Password: 88*****
 Host name: bi*****.3322.org
 WAN IP address: 111.243.178.53

To update the IP to the DDNS server via editing the HTML script, we can Enter the following script on the browser:

And the result will be :

“good 111.243.178.53” means our IP has been updated to the server successfully.

Now we have to configure the router so it can do the same job for us automatically.

1. Please go to **Applications >> Dynamic DNS** to create a profile for Customized DDNS client.

Applications >> Dynamic DNS Setup >> Dynamic DNS Account Setup

Index : 1

Enable Dynamic DNS Account

WAN Interface: WAN1 First

Service Provider: Customized

Provider Host: members.3322.net

Service API: /dyndns/update?hostname=yourhost.3322.org&myip=###IP###&wildcard=OFF&mx=mail.exchanger.ext&backmx=NO&offline=NO

II-5 Routing

Route Policy (also well known as PBR, policy-based routing) is a feature where you may need to get a strategy for routing. The packets will be directed to the specified interface if they match one of the policies. You can setup route policies in various reasons such as load balance, security, routing decision, and etc.

Through protocol, IP address, port number and interface configuration, Route Policy can be used to configure any routing rules to fit actual request. In general, Route Policy can easily reach the following purposes:

Load Balance

You may manually create policies to balance the traffic across network interface.

Specify Interface

Through dedicated interface (WAN/LAN/VPN), the data can be sent from the source IP to the destination IP.

Address Mapping

Allows you specify the outgoing WAN IP address (es) for an internal private IP address or a range of internal private IP addresses.

Priority

The router will determine which policy will be adopted for transmitting the packet according to the priority of Static Route and Route Policy.

Failover to/Failback

Packets will be sent through another Interface or follow another Policy when the original interface goes down (**Failover to**). Once the original interface resumes service (**Failback**), the packets will be returned to it immediately.

Other routing

Specify routing policy to determine the direction of the data transmission.

Info

For more detailed information about using policy route, refer to Support >>FAQ/Application Note on www.draytek.com.

Web User Interface

II-5-1 Static Route

Go to Routing >> Static Route. You can create static routes so that traffic to specific IP addresses go through a particular LAN or WAN.

The Static Route Setup screen has separate tabs for IPv4 and IPv6. Select the appropriate tab to begin.

Static Route for IPv4

Routing >> Static Route Setup

IPv4		IPv6		Set to Factory Default View Routing Table

Index	The number (1 to 40) under Index allows you to open next page to set up static route.																		
Enable	Enables or disables the static route.																		
Destination Address	Beginning destination address.																		
Mask	Subnet mask of the destination address.																		
Gateway	IP address of the gateway, which is the host that the traffic needs to go through to reach the destination.																		
Interface	The LAN or WAN that should be used to contact the gateway.																		
Backup	Click it to backup the configuration of static route settings.																		
Restore	Click it to restore the configuration of static route settings. Before clicking, make sure upload the configuration file onto Vigor router.																		

Add Static Routes to Private and Public Networks

Here is an example (based on IPv4) of setting Static Route in Main Router so that user A and B locating in different subnet can talk to each other via the router. Assuming the Internet access has been configured and the router works properly:

- use the Main Router to surf the Internet.
- create a private subnet 192.168.10.0 using an internal Router A (192.168.1.2)
- create a public subnet 211.100.88.0 via an internal Router B (192.168.1.3).
- have set Main Router 192.168.1.1 as the default gateway for the Router A 192.168.1.2.

Before setting Static Route, user A cannot talk to user B for Router A can only forward recognized packets to its default gateway Main Router.

1. Go to LAN page and click **General Setup**, select 1st Subnet as the RIP Protocol Control. Then click the OK button.

Info

There are two reasons that we have to apply RIP Protocol Control on 1st Subnet. The first is that the LAN interface can exchange RIP packets with the neighboring routers via the 1st subnet (192.168.1.0/24). The second is that those hosts on the internal private subnets (ex. 192.168.10.0/24) can access the Internet via the router, and continuously exchange of IP routing information with different subnets.

- Click the **LAN >> Static Route** and click on the **Index Number 1**. Check the **Enable** box. Please add a static route as shown below, which regulates all packets destined to 192.168.10.0 will be forwarded to 192.168.1.2. Click **OK**.

Routing >> Static Route Setup

Index No. 1

Enable

Destination IP Address: 192.168.10.0

Subnet Mask: 255.255.255.255 / 32

Gateway IP Address: 192.168.1.2

Network Interface: LAN1

OK Cancel Delete

Available settings are explained as follows:

Item	Description
Enable	Enables or disables the static route.
Destination IP Address	Beginning destination address. Enter an IP address as the destination of the static route.
Subnet Mask	Subnet mask of the destination address. Enter the subnet mask for the static route.
Gateway IP Address	Enter the IP address of the gateway, which is the host that the traffic needs to go through to reach the destination.
Network Interface	Use the drop down list to specify an interface for such static route. The LAN or WAN that should be used to contact the gateway.

- Return to **Static Route Setup** page. Click on another **Index Number** to add another static route as show below, which regulates all packets destined to 211.100.88.0 will be forwarded to 192.168.1.3. Click **OK**.

Routing >> Static Route Setup

Index No. 2

Enable

Destination IP Address: 211.100.88.0

Subnet Mask: 255.255.255.255 / 32

Gateway IP Address: 192.168.1.3

Network Interface: LAN1

OK Cancel Delete

- Go to **Diagnostics** and choose **Routing Table** to verify current routing table.

Diagnostics >> View Routing Table

IPv4 Routing Table | Refresh |

Key	Destination	Gateway	Interface
S~	192.168.10.0/ 255.255.255.255	via 192.168.1.2	LAN1
C~	192.168.1.0/ 255.255.255.0	directly connected	LAN1
S~	211.100.88.0/ 255.255.255.255	via 192.168.1.3	LAN1

Static Route for IPv6

You can set up to 40 profiles for IPv6 static route. Click on a route index on the IPv6 tab to configure an IPv6 static route.

Routing >> Static Route Setup

IPv4		IPv6

Set to Factory Default	Clear all of the settings and return to factory default settings.
Viewing IPv6 Routing Table	Displays the routing table for your reference.
Backup	Click it to backup the configuration of static route settings.
Restore	Click it to restore the configuration of static route settings. Before clicking, make sure upload the configuration file onto Vigor router.

Click any underline of index number to get the following page.

Routing >> Static Route Setup

Index No. 1

<input type="checkbox"/> Enable	
Destination IPv6 Address / Prefix Len	:: / 0
Gateway IPv6 Address	
Network Interface	LAN1 ▾

OK Cancel Delete

Available settings are explained as follows:

Item	Description
Enable	Enables or disables the static route.
Destination IPv6 Address / Prefix Len	Beginning destination address and the number of bits in the subnet mask of the destination IPv6 address. Enter the IP address with the prefix length for this entry.
Gateway IPv6 Address	IP address of the gateway, which is the host that the traffic needs to go through to reach the destination.
Network Interface	The LAN or WAN that should be used to contact the gateway.

When you finish the configuration, please click **OK** to save and exit this page.

II-5-2 Route Policy

The Route Policy feature gives you control over how different types of outbound traffic are routed, through any of the LANs, WANs or VPNs. The policy set in Route Policy always has higher priority than **Default Route** and **Auto Load Balance** set in **WAN >> Internet Access**, and always has lower priority than the **Firewall Rules**. Administrator may also define a priority to this policy.

To add, delete or modify load balance or route policies, select **Routing >> Route Policy** from the menu bar.

Wizard Mode: most frequently used settings in three pages

Advance Mode: all settings in one page

OK

Available settings are explained as follows:

Item	Description
Rules per page	The number of rules to display on a single page.
Set to Factory Default	Clear the settings of all Load-Balance and Route Policy rules.
Index	Rule index. Click to bring up the configuration page of the rule.
Enable	Select to enable this rule.
Protocol	Protocol(s) to which this rule applies.
Interface	LAN, IP Routed Subnet, WAN or VPN interface that the traffic described by this rule is to be directed.
Priority	The priority of this rule.
Source	The beginning and ending source IP address.
Destination	The beginning and ending destination IP address.
Dest Port	The beginning and ending destination port number.
Move UP/Move Down	Click to shift priority of rule up/down by one.
Wizard Mode	The setup wizard will present the most-commonly used rule settings in three steps.

Advance Mode	All the rule settings will be shown on one configuration page.
---------------------	--

If Wizard Mode is selected, you will be guided through the configuration process in three steps. Only the most commonly used settings will be shown.

1. Click the **Wizard Mode** radio button.
2. Click **Index 1**. The setting page will appear as follows:

Routing >> Load-Balance/Route Policy

Index: 1 Criteria

Load-Balance/Route Policy applies to packets that meet the following criteria

Source IP

Any

Src IP Start Src IP End

~

Destination IP

Any

Dest IP Start Dest IP End

~

Country Object

Available settings are explained as follows:

Item	Description
Source IP	Source IP addresses to which this rule is to be applied. Any - This rule applies to all source IP addresses. Src IP Start, Src IP End - This rule applies to the specified range of source IP addresses. If there is only one source IP address, enter the address in both the Start and End fields.
Destination IP	Destination IP addresses to which this rule is to be applied. Any - This rule applies to all destination IP addresses. Dest IP Start, Dest IP End - This rule applies to the specified range of destination IP addresses. If there is only one destination IP address, enter the address in both the Start and End fields. Country Object - Specify a country object. All the IPs coming from the country (countries) specified in the object will be passed through the WAN interface.

3. Click **Next** to get the following page.

Routing >> Route Policy

Index: 1 Interface

Load-Balance/Route Policy directs the packets to the interface below

Interface WAN1

Interface Address

Available settings are explained as follows:

If **Advance Mode** is selected, you will be presented with a single page with all the configurable settings for the rule.

1. Click the **Advance Mode** radio button.
2. Click **Index 1** to access into the following page.

Note:

Force NAT(Routing): NAT(Routing) will be performed on outgoing packets, regardless of which type of subnet (NAT or IP Routing) they originate from.

Available settings are explained as follows:

Item	Description
Enable	Select to enable rule and unlock all fields for configuration.
Comment	Type a brief explanation for such profile.
Criteria	<p>Router examines outgoing LAN traffic to find the first rule whose criteria are satisfied.</p> <p>Protocol - Use the drop-down menu to choose a proper protocol for the WAN interface.</p> <p>Source - Source IP addresses to which this rule is to be applied.</p> <ul style="list-style-type: none"> ● Any - This rule applies to all source IP addresses. ● IP Range -This rule applies to the specified range of source IP addresses. <ul style="list-style-type: none"> - Start - Enter an address as the starting IP for such profile. - End - Enter an address as the ending IP for such profile. ● IP Subnet - This rule applies to source IP addresses

	<p>defined by the specified network IP address and subnet mask.</p> <ul style="list-style-type: none"> - Network - Enter an IP address here. - Mask - Use the drop down list to choose a suitable mask for the network. <ul style="list-style-type: none"> ● IP Object / IP Group - Use the drop down list to choose a preconfigured IP object/group. <p>Destination - Destination IP addresses to which this rule is to be applied.</p> <ul style="list-style-type: none"> ● Any - This rule applies to all source IP addresses. ● IP Range - This rule applies to the specified range of destination IP addresses. <ul style="list-style-type: none"> - Start - Enter an address as the starting IP for such profile. - End - Enter an address as the ending IP for such profile. ● IP Subnet - This rule applies to destination IP addresses defined by the specified network IP address and subnet mask. <ul style="list-style-type: none"> - Network - Enter an IP address here. - Mask - Use the drop down list to choose a suitable mask for the network. ● Domain Name - Specify a domain name as the destination. <ul style="list-style-type: none"> - Select - Click it to choose an existing domain name defined in Objects Setting>>String Object. - Delete - Remove current used domain name. - Add - Create a new domain name as the destination. ● IP Object / IP Group - Use the drop down list to choose a preconfigured IP object/group. ● Country Object - Use the drop down list to choose a preconfigured object. Then all IPs within that country will be treated as the destination IP. <p>Destination Port - Destination port numbers to which this rule is to be applied. As only TCP and UDP protocols use port numbers, this setting does not apply to the ICMP protocol.</p> <ul style="list-style-type: none"> ● Any - This rule applies to all destination ports. ● Dest Port Range - This rule applies to the specified range of destination ports. <ul style="list-style-type: none"> - Start - Enter the destination port start for the destination IP. - End - Enter the destination port end for the destination IP. If this field is blank, it means that all the destination ports will be passed through the WAN interface.
Send via if criteria matched	<p>If criteria are matched, the traffic will be sent to the designated interface and gateway.</p> <p>Interface - Packets match with the above criteria will be transferred to the interface chosen here. Select an interface from the list (WAN/LAN: A WAN or LAN interface; VPN: A Virtual Private Network).</p> <p>Gateway - Select a gateway.</p>

	<ul style="list-style-type: none"> ● Default Gateway - Traffic will be sent to the default gateway address of the specified interface. ● Specific Gateway - Traffic will be sent to the specified gateway address instead of the default gateway address. <p>Packet Forwarding to WAN/LAN via - When you choose LAN/WAN (e.g., WAN1) as the Interface for packet transmission, you have to specify the way the packet forwarded to.</p> <ul style="list-style-type: none"> ● Force NAT - The source IP address will not be used to connect to the remote destination. Network Address Translation (NAT) will be used, where a common IP address will be used. ● Force Routing - The source IP address will be preserved when connecting to the remote destination. <p>Failover to - If the interface specified above loses connection, traffic can be forwarded to an alternate interface or be scrutinized by an alternate route policy.</p> <ul style="list-style-type: none"> ● WAN/LAN - Use the drop down list to choose an interface as an auto failover interface. ● VPN - Use the drop down list to choose a VPN tunnel as a failover tunnel. ● Route Policy - Use the drop down list to choose an existed route policy profile. ● Gateway IP - The failed-over traffic can be sent to the Default Gateway of the alternate interface/route policy, or a Specific Gateway at the specified IP address. <p>Failback- When Failover to option is enabled, Administrator could also enable Failback to clear the existing session on Failover interface and return to the original interface immediately once the original interface resume its service. When Failback is not enabled, the router will only stop sending packets via the Failover interface when the existing sessions are cleared, and this might take a long time because some application will keep sending packet once a while. Therefore, Failback option is recommended if Administrator wants the traffic to go via the primary interface as soon as possible.</p>
<p>Priority</p>	<p>Specifies the priority of the rule in relation to other rules. Lowering the priority value increases the priority of the rule, and vice versa. Routes in the routing table have a priority value of 150, whereas the default routes have a priority value of 250.</p> <p>The default priority value of Load Balance/Route Policy rules is 200. To change the priority, move the slider or enter a value.</p>

3. When you finish the configuration, please click **OK** to save and exit this page.

Diagnose for Route Policy

The Diagnose function allows you to determine how a specific type of traffic from a host to a destination will be routed, and which routes, route policies and load balance rules match the criteria of the traffic.

Click **Diagnose**.

Analyze a single packet

Select this mode to make Vigor router analyze how a single packet will be sent by a route policy.

Diagnostics >> Route Policy Diagnosis

Test how the packets will be routed

- Mode**
- Analyze a single packet
 - Analyze multiple packets by uploading an input file

Application Notes

A-1 How to set up Address Mapping with Route Policy?

Address Mapping is used to map a specified private IP or a range of private IPs of NAT subnet into a specified WAN IP (or WAN IP alias IP). Refer to the following figure.

This document introduces how to set up address mapping with Route Policy. When a WAN interface has multiple public IP addresses, Administrator may specify the outgoing IP for certain internal IP address by a Route Policy.

1. Set up WAN IP Alias. Go to **WAN >> Internet Access >> Details Page**, and click on **WAN IP Alias** button.

Index	Enable	Aux. WAN IP
1.	<input checked="" type="checkbox"/>	---
2.	<input checked="" type="checkbox"/>	172.17.1.1
3.	<input checked="" type="checkbox"/>	172.17.2.2
4.	<input type="checkbox"/>	0.0.0.0
5.	<input type="checkbox"/>	0.0.0.0
6.	<input type="checkbox"/>	0.0.0.0
7.	<input type="checkbox"/>	0.0.0.0
8.	<input type="checkbox"/>	0.0.0.0

<< 1-8 | 9-16 | 17-24 | 25-32 >> [Next >>](#)

- Check Enable.
- Enter the WAN IP address.
- Click OK to save.

After setting up the WAN IP Alias, the IP addresses will be shown in the drop-down list of Interface in Route Policy setting.

- Go to **Routing**>> **Route Policy**. Create a Route Policy for specific IP address to send from specific WAN IP Address.

Index: 1

Enable

Comment:

Criteria

Protocol:

Source: Start: End:

Destination:

Destination Port:

Send via if Criteria Matched

Interface: WAN/LAN
 VPN

Gateway: Default Gateway Specific Gateway

Packet Forwarding to WAN/LAN via: Force NAT Force Routing

Failover to: WAN/LAN
 VPN Route Policy

Gateway: Default Gateway Specific Gateway

- Enable this policy.
 - Enter **Source IP** as the range of private IP address.
 - Leave the Destination IP and Port as **Any**.
 - Select **Interface** as WAN, and then select Interface address from the drop-down list. (The List can be edited in **WAN IP Alias** setting.)
 - Enable **Failover** to other WAN so the traffic will be sent via other Interface when the path fails. But do not enable this option if you want the traffic only to use a designated IP address.
 - Click **OK** to save.
- After the above configuration, packet source from the range between 192.168.1.20 and 192.168.1.30 sent to the Internet will use the public IP 172.17.1.1.

A-2 How to use destination domain name in a route policy?

Route Policy supports using a domain name as destination criteria. It provides a more direct way to set up route policies if the network administrator is trying to specify the gateway for the traffic that destined for a certain website.

To use a destination domain name as criteria, just select **Domain Name** as **Destination** in **Criteria**, and enter the domain name in the empty field.

Criteria

Protocol: Any

Source: IP Range
Start: 192.168.1.20 End: 192.168.1.30

Destination: Domain Name
- server1.draytek.com [Select] [Delete]
[Add]

Destination Port: Any

Send via if Criteria Matched

Interface: []

Or you may click **Select**, and use a string that is pre-defined in **Objects Settings >> String Object** as the domain name.

Routing >> Load-Balance/Route Policy

Index: 1

Enable

Comment: []

Criteria

Protocol: Any

Source: IP Range
Start: 192.168.1.1

Destination: Domain Name
- [] [Select] [Delete]
[Add]

Destination Port: Any

Send via if Criteria Matched []

String Object - Google Chrome

Objects Setting >> String Object

Index	String
<input type="radio"/> 1	Floor_1
<input type="radio"/> 2	Floor_2
<input type="radio"/> 3	server1.draytek.com
<input type="radio"/> 4	Draytek Hotspot
<input type="radio"/> 5	Floor_3
<input type="radio"/> 6	portal.draytek.com

[OK] [Cancel]

Click **Add** too add more domain names, we can set up to 5 domain names in one route policy.

Protocol: Any

Source: IP Range
Start: 192.168.1.1 End: 192.168.1.1

Destination: Domain Name

1	Floor_1	[Select]	[Delete]
3	server1.draytek.com	[Select]	[Delete]
4	Draytek Hotspot	[Select]	[Delete]
2	Floor_2	[Select]	[Delete]

[Add(up to 5)]

Destination Port: Any

Send via if Criteria Matched

Auto-create String Objects

If you manually enter the domain name in a route policy, after clicking OK to apply the route policy, those domain names will be given a number.

The screenshot shows a configuration window for a route policy. The 'Protocol' is set to 'Any'. The 'Source' is 'IP Range' with 'Start: 192.168.1.1' and 'End: 192.168.1.1'. The 'Destination' is 'Domain Name'. Below this, a list of domain names is shown with 'Select' and 'Delete' buttons for each. The list includes: 1 - Floor_1, 3 - server1.draytek.com, 4 - Draytek Hotspot, and 2 - Floor_2. There is an 'Add(up to 5)' button and a 'Destination Port' set to 'Any'. The 'Send via if Criteria Matched' checkbox is unchecked.

That means the router has automatically created string objects for those domain names, so that they can be used in other route policies or other functions.

Objects Setting >> String Object

A-3 Introduction to Route Policy

This document introduces the Route Policy. This feature allows network administrator to manage the outbound traffic more specifically.

The Policy set in Route Policy always has higher priority than Default Route and Auto Load Balance set in **WAN >> General Setup**, and always has lower priority than the Firewall Rules. Administrator may also define a priority to this policy.

To configure Route Policy, go to **Routing>> Route Policy**. The following image is a screen-shot of Route policy page. It lists all the policies and shows whether the policy is enabled, what are the criteria to match, and through which the interface should the traffic to go if the criteria are matched, and also its priority.

Index	Enable	Comment	Protocol	Interface	Priority	Source	Destination	Dest Port	Move Up	Move Down
1	<input checked="" type="checkbox"/>		Any	WAN1	200	192.168.1.1~192.168.1.1	Any	Any		Down
2	<input type="checkbox"/>		Any	WAN1	200	Any	Any	Any	UP	Down
3	<input type="checkbox"/>		Any	WAN1	200	Any	Any	Any	UP	Down
4	<input type="checkbox"/>		Any	WAN1	200	Any	Any	Any	UP	Down
5	<input type="checkbox"/>		Any	WAN1	200	Any	Any	Any	UP	Down
6	<input type="checkbox"/>		Any	WAN1	200	Any	Any	Any	UP	Down
7	<input type="checkbox"/>		Any	WAN1	200	Any	Any	Any	UP	Down
8	<input type="checkbox"/>		Any	WAN1	200	Any	Any	Any	UP	Down
9	<input type="checkbox"/>		Any	WAN1	200	Any	Any	Any	UP	Down
10	<input type="checkbox"/>		Any	WAN1	200	Any	Any	Any	UP	Down

<< 1-10 | 11-20 | 21-30 | 31-40 | 41-50 >>

Next >>

Wizard Mode: most frequently used settings in three pages

Advance Mode: all settings in one page

Note:

The policies in blue are SD-WAN related, and can only be edited via ACS.

OK

To set up a Route Policy, just click on an Index number. At the bottom of the page, there are two configuration modes could be choose: the Wizard Mode provides a simple and basic configuration; while Advance Mode allows more options. Here we select Advance Mode.

1. First, set the criteria of the packets to apply this policy.

Index: 3

Enable

Comment

Criteria

Protocol

Source Start: End:

Destination Start: End:

Destination Port

Send via if Criteria Matched

- a. Select a Protocol.
- b. Enter the Source IP address range, the Source IP could be a single address if the Start and End are the same.
- c. Enter the Destination IP address range.
- d. Select the Destination Port.

The above configuration is an example that if a packet is sent from 192.168.1.10~192.168.1.100 to 8.8.8.8, no matter what the protocol or destination port is, it will follow this route policy.

2. Next, we select an interface and gateway through which should the packet be sent if it matches the criteria.

Destination Port:

Send via if Criteria Matched

Interface: WAN/LAN VPN
 WAN/LAN: WAN1
 VPN: VPN 1.???

Gateway: Default Gateway Specific Gateway
 Specific Gateway:

Packet Forwarding to: Force NAT

- a. Select an Interface.
- b. Select a Gateway IP. Note that if Interface is chosen to be a LAN, it is necessary to designate a specific gateway.

The above configuration is an example that if a packet matches the criteria of this Route Policy, it will be sent to the default gateway then the destination through VPN1.

3. In **Advance Mode**, if the Interface is selected as WAN or VPN, there are some more options:

Send via if Criteria Matched

Interface: WAN/LAN VPN
 WAN/LAN: WAN1
 VPN: VPN 1.???

Gateway: Default Gateway Specific Gateway
 Specific Gateway:

Packet Forwarding to WAN/LAN via: Force NAT Force Routing

Failover to:
 WAN/LAN: Default WAN
 VPN: VPN 1.???
 Route Policy: Index 1
 Default Gateway
 Specific Gateway: 0.0.0.0

Priority

Priority: Low High

250 Default Route | 150 Routes in Routing Table | 0

- **Failover to:** Enables packet to be sent through other Interface or follow another Policy when detects a path failure in the original interface. The above configuration indicates that the packets will be sent through WAN2 when the original route is disconnected.
- **Failback:** When "Failover to" option is enabled, Administrator could also enable "Failback" to clear the existing session on Failover interface and return to the original interface immediately once the original interface resume its service. When Failback is not enabled, the router will only stop sending packet via the Failover interface when the existing sessions are cleared, and this might take a long time because some application will keep sending packet once a while. Therefore, Failback option is recommended if Administrator want the traffic go via the primary interface as soon as possible.
- **Priority:** Administrator may set priority between 1 and 249 for this Route policy, where smaller number indicates higher priority. When two policies are having the same priority, the first (according to the policy index order) matched policy will be implemented.

This page is left blank.

Part III Wireless LAN

Wireless

Wireless LAN enables high mobility so WLAN users can simultaneously access all LAN facilities just like on a wired LAN as well as Internet access.

III-1 Wireless LAN (2.4GHz/5GHz)

This function is available on wireless models only (models with -n or -ac suffixes).

In recent years, the market for wireless communications has enjoyed tremendous growth. Wireless technology now reaches virtually every location on earth. Billions of people exchange information daily with wireless communication products. The Vigor2860 series of wireless routers (with "n", "n-plus", or "ac" in the model name), designed with maximum flexibility and efficiency in mind, is ideal for use in a small office or home. In a business environment, any authorized personnel can bring a WLAN-equipped tablet, PDA or notebook into a meeting room and connect to the network without drilling holes through walls or tearing up flooring to lay a lot of LAN cabling. Wireless networking enables high mobility so WLAN users can access all LAN resources in the same manner just as they would on a wired LAN, but without the cables.

All Vigor2135 wireless routers support 2.4 GHz. ac models add support for 5 GHz frequencies. Channel operations of 20 and 40 MHz are possible on the 2.4 GHz spectrum, and 20, 40 and 80 MHz are supported on the 5 GHz spectrum. "ac" models (2865ac) support data rates of up to 1.3 Gbps on 802.11ac 80 MHz channels, whereas "n" models support data rates of up to 300 Mbps on 802.11n 40 MHz channels.

Info

The actual data throughput will vary according to the network conditions and environmental factors, including volume of network traffic, network overhead and building materials.

In an Infrastructure Mode of wireless network, Vigor wireless router plays a role as an Access Point (AP) connecting to lots of wireless clients or Stations (STA). All the STAs will share the same Internet connection via Vigor wireless router. The wireless network settings, such as SSID, channels, encryption protocol, can be configured in General Settings.

Multiple SSIDs

Vigor wireless routers support up to four SSIDs (Service Set Identifiers) per band for wireless connections. A service set is a group of wireless network clients that have the same

networking parameters. Each service set can be configured to have a unique name (SSID) and specific download and upload rates, and can be used by different categories of users.

Real-time Hardware Encryption

Vigor wireless routers are equipped with a hardware AES encryption engine to provide the most effective and efficient protection of wireless traffic, without sacrificing user experience.

Complete Security Standard Selection

To ensure the security and privacy of your wireless communication, we provide several prevailing standards on market.

WEP (Wired Equivalent Privacy) is a legacy method to encrypt each frame transmitted via radio using either a 64-bit or 128-bit key. Usually access point will preset a set of four keys and it will communicate with each station using only one out of the four keys.

WPA (Wi-Fi Protected Access), the most dominating security mechanism in industry, is separated into two categories: WPA-personal or called WPA Pre-Share Key (WPA/PSK), and WPA-Enterprise or called WPA/802.1x.

In WPA-Personal, a pre-defined key (PSK) is used to encrypt traffic during data transmission. WPA uses the Temporal Key Integrity Protocol (TKIP) for data encryption whereas WPA2 applies AES (Advanced Encryption Standard). A major advantage of WPA-Enterprise is that it supports not only encryption but also authentication.

You should select the appropriate security mechanism according to your needs. Because WEP has proven to be vulnerable to attacks, you should consider using WPA instead for the most secure connection. No matter which security suite you select, they all will enhance the over-the-air data protection and /or privacy on your wireless network. The Vigor wireless router is very flexible and can support multiple secure connections with both WEP and WPA at the same time.

Info

The default password (PSK) is listed on a label attached to the bottom of the router. Since anyone who has physical access to the router can discover the default password, you are strongly advised to change it.

Separate the Wireless and the Wired LAN- WLAN Isolation

WLAN Isolation allows you to separate wireless LAN clients from wired ones, either for the purpose of quarantining certain users, or restricting their access to LAN resources. When WLAN isolation is enabled on an SSID, its users will only be able to connect to the WAN (i.e., internet). This is ideal for providing visitors Internet access while keeping the wired network secure.

For the highest degree of security, you may consider adding firewall rules to filter access by MAC address.

Manage Wireless Stations - Station List

All stations on the wireless network and their connection status is shown here.

DFS Restrictions

In certain parts of the world, there are radar systems that are primary users of the 5 GHz band. WLAN equipment on the 5 GHz band is considered secondary users and must not cause interference to the primary users. By utilizing a feature called Dynamic Frequency Selection, the wireless router detects the presence of radar signals and relocates the wireless network to a clear channel. DFS channels vary by region, and we must obtain certification from the authorities before making them available for use on the Vigor router. We are working on DFS certification in Europe and will open up those channels by releasing new firmware once we pass certification. In Europe, these DFS channels will be made available 52, 56, 60, 64, 100, 104, 108, 112, 116, 120, 124, 128, 132, 136 and 140.

At this time, we have no plans to pursue DFS certification in the USA, so DFS channels will not be available in the foreseeable future. The U.S. DFS channels 52, 56, 60, 64, 100, 104, 108, 112, 116, 120, 124, 128, 132, 136 and 140 will not be available on routers sold in the United States.

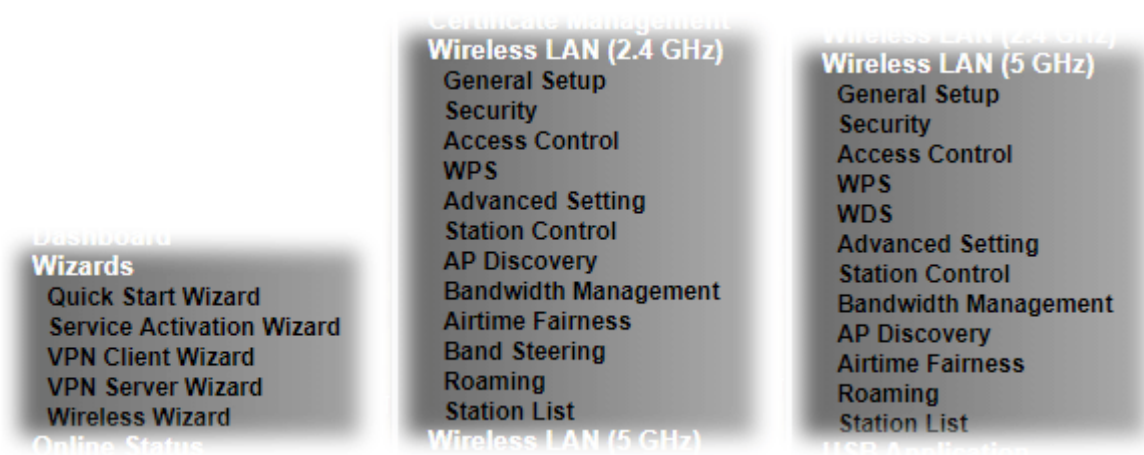

In the rest of world, there are restrictions on DFS channels as well. Uncertified DFS channels will be unavailable for selection depending on the country code programmed in the router.

WPS

WPS (Wi-Fi Protected Setup) makes connecting wireless clients to wireless access points and routers a simple process.

Web User Interface

III-1-1 Wireless Wizard

On Wi-Fi-equipped models, you can configure the wireless access point (AP) using the Wireless Wizard. The Host AP Configuration sets up SSID 1 for use by internal users, who are allowed to access both the LAN and the WAN (Internet), whereas the Guest AP Configuration sets up SSID 2 for use by visitors, who are allowed only WAN access and whose access speeds can optionally be throttled.

The Wireless Wizard allows you to quickly configure a host SSID (for internal use, such as in a home or business environment), and optionally a guest SSID (for wireless clients that are restricted to Internet access only, typically used by visitors).

Follow the steps listed below:

1. On the menu bar, click on **Wizards**, and then **Wireless Wizard**.
2. The Host AP Configuration page appears. This page sets up SSID 1 for use by internal users. SSID 1 configured using the wizard will have no access speed throttling (by means of the Rate Control feature), and both the LAN and the WAN will be accessible.

Host AP Configuration

Wireless 2.4GHz Settings	
Name:	<input type="text" value="DrayTek"/>
Mode:	<input type="text" value="Mixed(11b+11g+11n)"/>

III-1-3 Security

Every router has a default wireless password (PSK) which is provided on a label attached to the bottom of the router. For the wireless client who wants to access into Internet through such router, please input the default PSK value for connection.

For extra security you can set your own wireless password by clicking the **Wireless LAN>>Security Settings** entry on the Web User Interface. Each of the 4 SSIDs can be configured independently using their own tab page.

Wireless LAN(2.4 GHz) >> Security Settings

SSID 1	SSID 2	SSID 3	SSID 4
<p>SSID: DrayTek</p> <p>Mode: <input style="width: 100px;" type="text" value="Mixed(WPA+WPA2)/PSK"/></p> <p><u>WPA</u></p> <p>Encryption Mode: TKIP for WPA/AES for WPA2</p> <p>Pre-Shared Key(PSK): <input style="width: 100px;" type="text" value="....."/></p> <p>Password Strength: <input type="button" value="Weak"/> <input type="button" value="Medium"/> <input type="button" value="Strong"/></p> <p>Note: Type 8~63 ASCII characters, for example: "cfigs01a2...".</p> <p>For strong passwords: 1. Use at least 12 characters. 2. For 64 bit WEP key configurations, please insert 5 ASCII characters, for example: "AB312". For 128 bit WEP key configurations, please insert 13 ASCII characters.</p>			
<input type="button" value="OK"/> <input type="button" value="Cancel"/>			

Available settings are explained as follows:

Item	Description
Mode	This dialog box lists all available security modes.

Info

You should also set **RADIUS Server** simultaneously if 802.1x mode is selected.

Disable - Encryption mechanism is disabled.

WEP - Allow only connections from WEP clients. Encryption key should be entered in the WEP Key section.

WEP/802.1x Only - Accepts only WEP clients and the encryption key is obtained dynamically from RADIUS server with 802.1X protocol.

Allow only connections from WEP clients. Encryption key is obtained from a RADIUS server using the 802.1X protocol.

WPA/802.1x Only - Allow only connections from WPA clients. Encryption key is obtained from a RADIUS server using the 802.1X protocol.

WPA2/802.1x Only - Allow only connections from WPA2 clients. Encryption key is obtained from a RADIUS server using the 802.1X protocol.

Mixed (WPA+WPA2)/802.1x only - Allow connections from both WPA and WPA2 clients. Encryption key is obtained from a RADIUS server using the 802.1X protocol.

WPA/PSK - Allow connections only from WPA clients. Encryption key should be entered in the PSK field.

WPA2/PSK - Allow connections only from WPA2 clients. Encryption key should be entered in the PSK field.

Mixed (WPA+ WPA2)/PSK - Allow connections from both WPA and WPA2 clients. Encryption key should be entered in the PSK field.

Encryption key should be entered in the PSK field.</p> </div> <div data-bbox="689 1373 1370 1442" data-label="Text"> <p>WPA2/PSK - Allow connections only from WPA2 clients. Encryption key should be entered in the PSK field.</p> </div> <div data-bbox="689 1449 1430 1547" data-label="Text"> <p>Mixed (WPA+ WPA2)/PSK - Allow connections from both WPA and WPA2 clients. Encryption key should be entered in the PSK field.</p> </div>
<p>WPA</p>	<p>WPA encrypts each frame transmitted from the radio using the key, which is either entered in the PSK (Pre-Shared Key) field, or or automatically negotiated via 802.1x authentication from a RADIUS server.</p> <p>Pre-Shared Key (PSK) - Enter 8-63 ASCII characters, for example, "012345678..", or 64 hexadecimal digits with a leading "0x", for example, "0x321253abcde..".</p> <p>Password Strength - The system will display the strength of the password, indicated by the words "weak", "medium" or "strong".</p>
<p>WEP</p>	<p>WEP keys can either be 64-bit or 128-bit.</p> <p>64-Bit - Either 5 ASCII characters, for example "12345", or 10 hexadecimal digitals with a leading "0x", such as "0x4142434445".</p> <p>128-Bit - Either 13 ASCII characters, for example</p>

"ABCDEFGHJKLMN", or 26 hexadecimal digits with a leading "0x", for example "0x4142434445464748494A4B4C4D".

Up to four keys can be entered here, but only one key can be selected at any time. The keys can be entered in ASCII or Hexadecimal.

All wireless devices intending to connect to the same SSID must support the same WEP encryption bit size and have the same key.

To save changes on this page, select **OK**; to discard changes, select **Cancel**.

III-1-4 Access Control

In the **Access Control**, the router may restrict wireless access to certain wireless clients only by referencing a MAC address black or white list. The user may block wireless clients by inserting their MAC addresses into a black list, or only allow certain wireless clients to connect by inserting their MAC addresses into a white list.

In the Access Control web page, users may configure the **white/black** list modes used by each SSID and the MAC addresses applied to their lists.

Wireless LAN(2.4 GHz) >> Access Control

Access Control

Enable Mac Address Filter SSID 1 White List SSID 2 White List
 SSID 3 White List SSID 4 White List

Client's MAC Address : : : : : :

Apply SSID : SSID 1 SSID 2 SSID 3 SSID 4

Attribute : s: Isolate the station from LAN

Comment :

Backup Access Control: Upload From File: 未選擇任何檔案

Note:
Support AP ACL configuration file restoration.

Available settings are explained as follows:

Item	Description
Enable Mac Address Filter	<p>Select the SSIDs that you would like to have MAC Address filter enabled. Select White List or Black List in the combo box next to each enabled SSIDs.</p> <p>White List - Only allow wireless clients whose MAC addresses are listed in the MAC Address Filter list.</p> <p>Black List - Only allow wireless clients whose MAC addresses are not listed in the MAC Address Filter list.</p>

MAC Address Filter	Displays all MAC addresses in the filter list.
Client's MAC Address	Manually enter the MAC address of wireless client.
Apply SSID	Select the SSIDs to which the above MAC address filter will be applied.
Attribute	s: Isolate the station from LAN - select to isolate the wireless client from LAN.
Comment	Enter a brief description for the specified client's MAC address.
Add	Add a new filter entry to the MAC Address filter list using the information entered above.
Delete	Delete the selected MAC address from the list.
Edit	Update the selected MAC address in the list using the information entered above.
Cancel	Clear the contents of all the above fields. This will discard all changes without saving to the MAC Address Filter list.
OK	Click to save the MAC Address Filter list.
Clear All	Remove all entries from the MAC Address Filter list.
Backup Access Control	Settings on this web page can be saved as a file which can be restored in the future by this device or other device.
Upload From File	Restore wireless access control settings and applied onto this device.

To save changes on this page, select **OK**.

III-1-5 WPS

WPS (Wi-Fi Protected Setup) provides an easy way to connect wireless to wireless access points and routers with WPA or WPA2 encryption.

Info

WPS works with wireless stations with WPS or WPS2 support. It does not work with WEP.

It is the simplest way to build connection between wireless network clients and vigor router. Users do not need to select any encryption mode and type any long encryption passphrase to setup a wireless client every time. He/she only needs to press a button on wireless client, and WPS will connect for client and router automatically.

There are two methods to do network connection through WPS between AP and Stations: pressing the *Start PBC* button or using *PIN Code*.

Using the PBC button

On the Vigor router, press and hold the WPS button on the front panel for 2 seconds, or click the **Start PBC** button on the **Wireless LAN>>WPS** page in the Web User Interface. On the wireless station (for example, a laptop computer), press the **WPS/Start PBC** button on the network card.

Using a PIN code

You may establish a wireless connection by entering a PIN code generated by a wireless client that supports WPS.

WPS is only supported when the encryption protocol is set to WPA-PSK or WPA2-PSK. If other protocols (such as WEP) have been selected in **Wireless LAN>>Security**, you will see the following message box:

Please click **OK** to dismiss dialog box, return to **Wireless LAN>>Security** and select **WPA-PSK** or **WPA2-PSK** mode before attempting to enable WPS again.

Below shows Wireless LAN>>WPS web page:

Wireless LAN(2.4GHz) >> WPS (Wi-Fi Protected Setup)

Enable WPS 

Wi-Fi Protected Setup Information

WPS Status	Configured
SSID	DrayTek
Authentication Mode	WPA2/PSK

Device Configure

Configure via Push Button	<input type="button" value="Start PBC"/>
Configure via Client PinCode	<input type="text"/> <input type="button" value="Start PIN"/>

Status: Ready

Note:

WPS can help your wireless client automatically connect to the Access point.

: WPS is Disabled.

: WPS is Enabled.

: Waiting for WPS requests from wireless clients.

Available settings are explained as follows:

Item	Description
Enable WPS	Check this box to enable WPS setting.
WPS Status	Displays system information related to WPS. The message "Configured" means that the wireless security (encryption) function of the router is properly configured and functioning properly.
SSID	Displays the SSID1. WPS is supported on SSID1 only.
Authentication Mode	Displays the current authentication mode of the router.
Configure via Push Button	Click Start PBC to invoke Push-Button style WPS setup procedure. The router will wait for about 2 minutes for WPS connection requests from wireless clients. The WPS LED on the router will blink fast when WPS is in progress, and will return to normal condition after two minutes.
Configure via Client PinCode	Enter a PIN code, and click the Start PIN button. The WPS LED on the router will blink rapidly when WPS is in progress, for up to 2 minutes or until a successful WPS connection from a wireless client has been established.

III-1-6 WDS (for 5GHz)

Wireless Distribution System (WDS) is a protocol for linking access points (AP) wirelessly. WDS supports two modes:

- Bridge mode, which bridges traffic between two LANs wirelessly.

- Repeater mode, which extends the coverage range of a WLAN.

The main difference between these two modes is that, in Repeater mode, the packets received from one peer AP can be repeated to another peer AP through WDS links, whereas in Bridge mode, packets received from a WDS link will only be forwarded to local wired or wireless hosts. In other words, only Repeater mode can do WDS-to-WDS packet forwarding.

In the following example, hosts connected to Bridge 1 or 3 can communicate with hosts connected to Bridge 2 through WDS links. However, hosts connected to Bridge 1 cannot communicate with hosts connected to Bridge 3 through Bridge 2.

Click **WDS** from **Wireless LAN** menu. The following page will be shown.

Wireless LAN(5GHz) >> WDS Settings

[Set to Factory Default](#)

OK Cancel

Available settings are explained as follows:

Item	Description
Mode	Choose the WDS mode. Disable - WDS is disabled. Repeater - WDS is enabled in Repeater mode.
Security	Choose one of the types for the router. The setting you choose here will make the following WEP or Pre-shared key field valid or not. Disable - Security is disabled. WEP - Security is enabled. Pre-shared key - Security is enabled.
Pre-shared Key	Type - Select either WPA or WPA2 as the encryption protocol. Key - Enter 8 ~ 63 ASCII characters or 64 hexadecimal digits with a leading "0x".
Repeater	If Repeater was selected as the WDS mode, enter the peer MAC addresses in these fields. Up to four peer MAC addresses may be entered in this page. Select the checkbox in front of a MAC address to enable it.
Access Point Function	Select Enable to make this router serve as an access point; select Disable to disable access point function.
Status	Click to send a "hello" message to peers. This only works if the peer also supports this function.

To save changes on this page, select **OK**; to discard changes, select **Cancel**.

III-1-7 Advanced Setting

On this page you can configure advanced settings such as operation mode, channel bandwidth, guard interval, and aggregation MSDU for wireless data transmission.

If the Vigor router supports dual-band WLAN, you will see separate Advanced Setting sections for 2.4GHz and 5GHz.

2.4 GHz Advanced Setting page

Available settings are explained as follows:

Item	Description
------	-------------

Operation Mode	<p>Mixed Mode - The router can transmit data using all protocols supported by 802.11a/b/g and 802.11n standards. However, all wireless transmissions will be slowed down when any 802.11g or 802.11b wireless client is connected.</p> <p>Green Field - Select this mode to achieve the highest throughput. This mode supports data transmission between 802.11n systems only. In addition, it does not have protection mechanism to prevent conflicts with neighboring 802.11a/b/g devices.</p>
Channel Bandwidth	<p>20 -Vigor Router will utilize 20 MHz channels for data transmission and reception between the AP and wireless stations.</p> <p>40 -Vigor Router will utilize 40 MHz for data transmission and reception between the AP and wireless stations.</p> <p>20/40 - Vigor Router will utilize either 20 MHz or 40 MHz for data transmission and reception depending on the number of nearby wireless APs. 20MHz will be used when there are more than 10 wireless APs; otherwise 40MHz will be used. Selecting this setting ensures the best performance for data transit on networks with both 20 MHz and 40 MHz clients.</p>
Guard Interval	<p>Enabling this setting ensures the integrity of wireless traffic by inserting guard intervals between symbols to reduce the adverse effects of propagation delays, and signal multipath or reflections. If you choose auto as guard interval, the router will choose short guard interval (which increases wireless performance) or long guard interval for data transmit depending on the station capability.</p>
Aggregation MSDU (A-MSDU)	<p>Aggregation MSDU can combine frames of different sizes to improve performance at the MAC layer for clients from certain manufacturers. The default setting is Enable.</p>
Long Preamble	<p>This option determines the length of the sync field in an 802.11 packet. Most modern wireless network uses short preamble with 56 bit sync fields which yield better transmission speeds. However, some older 802.11b wireless devices only support long preamble which uses 128-bit sync fields. Click Enable to use Long Preamble to maintain compatibility with these devices.</p>
Packet-OVERDRIVE	<p>This feature can enhance the performance in data transmission about 40%* (by checking Tx Burst). It is active only when both the Access Point and Station (in wireless client) support and invoke this function at the same time.</p> <p>Note: Vigor N61 wireless adapter supports this function. Therefore, you can install it on your PC to take advantage of Packet-OVERDRIVE (Refer to the following picture of Vigor N61 wireless utility window: choose Enable for TxBURST on the Option tab).</p>

	 <p>Info * Real transmission rate depends on the environment of the network.</p>
<p>Antenna</p>	<p>Vigor router can be attached with two antennas to have good data transmission via wireless connection. However, if you have only one antenna attached, please choose 1T1R.</p>
<p>TX Power</p>	<p>Sets the power percentage of the access point's transmission signal. The greater the TX Power value, the higher intensity of the signal will be.</p>
<p>WMM Capable</p>	<p>WMM stands for Wi-Fi Multimedia. It provides basic Quality of Service (QoS) by prioritizing traffic based on four access categories defined in the IEEE 802.11e standard. The access categories are AC_VO, AC_VI, AC_BE and AC_BK, which corresponds to traffic types of voice, video, best effort and low priority (background) data, respectively.</p> <p>To apply WMM parameters to wireless data transmission, click the Enable radio button.</p>
<p>APSD Capable</p>	<p>APSD (Automatic Power-Save Delivery) is an enhancement over the power-saving mechanisms supported by Wi-Fi networks. It allows access points to buffer traffic before transmitting it to wireless devices, thus allowing wireless devices to enter into power saving mode which reduces power consumption. Not all wireless clients support APSD properly, and the only way to find out if APSD is appropriate for your network is to experiment.</p> <p>The default setting is Disable.</p>
<p>Rate Adaptation Algorithm</p>	<p>Wireless transmission rate is adapted dynamically. Usually, performance of "new" algorithm is better than "old".</p> <p>Sets the way the Wireless transmission rate is adjusted dynamically. In most cases, selecting "New" will result in better performance than "Old".</p>
<p>Fragment Length (256 - 2346)</p>	<p>Set the Fragment threshold. You are advised to leave the default value, 2346, untouched.</p>

RTS Threshold (1 - 2347)	<p>Minimize the collision (unit is bytes) between hidden stations to improve wireless performance.</p> <p>Set the RTS threshold. Do not modify default value if you don't know what it is, default value is 2347.</p> <p>Adjusts the 802.11 maximum transmit frame size, which might reduce chances of collision with hidden stations. You are advised to leave the default value, 2347, untouched.</p>
Country Code	<p>Vigor router broadcasts country codes according to the 802.11d standard. However, some wireless stations will detect/scan access points looking for country codes to determine which country it is in, and utilize channels appropriate to the country. The wireless client might get confused if there are multiple access points in the vicinity broadcasting different country codes. In such cases, it might be necessary to change the country code of the access point to ensure these clients can successfully establish a wireless connection.</p>
Isolate 2.4GHz and 5GHz bands	<p>The default setting is "Enable". It means that the wireless client using 2.4GHz band is unable to connect to the wireless client with 5GHz band, and vice versa.</p> <p>For WLAN 2.4GHz and 5GHz set with the same SSID name:</p> <ul style="list-style-type: none"> ● No matter such function is enabled or disabled, clients using WLAN 2.4GHz and 5GHz can communicate for each other if Isolate Member (in Wireless LAN>>General Setup) is NOT enabled for such SSID. ● Yet, if the function of Isolate Member (in Wireless LAN>>General Setup) is enabled for such SSID, clients using WLAN 2.4GHz and 5GHz will be unable to communicate with each other.

After finishing all the settings here, please click **OK** to save the configuration.

III-1-8 Station Control

Station Control is used to specify the duration that the wireless client can connect to the Vigor router. If this function is disabled, wireless clients can connect to the router as long as the router is powered on and the wireless feature is enabled.

This feature is especially useful for free WiFi service. For example, a coffee shop may offer free Wi-Fi service to its guests for one hour every day. In this scenario, the connection time can be set to "1 hour" and reconnection time set to "1 day". In this way, every guest can surf the net for at most one hour, thus freeing up resources for other guests.

Wireless LAN(2.4GHz) >> Station Control

SSID 1	SSID 2	SSID 3	SSID 4
SSID		DrayTek	
Enable		<input type="checkbox"/>	
Connection Time		1 hour ▼	
Reconnection Time		1 day ▼	
Display All Station Control List			
Hotspot Web Portal			

Note:

Once the feature is enabled, the connection time quota will apply to each wireless client (identified by MAC address).

OK Cancel

Available LAN settings are explained as follows:

Item	Description
SSID	Display the selected SSID.
Enable	Select to enable station control function for this SSID.
Connection Time / Reconnection Time	In the Connection Time dropdown box, select the maximum amount of time that a wireless client is allowed to connect within the period of time selected in the Reconnection Time dropdown box. Select User defined to manually enter the time in days, hours and minutes.
Display All Station Control List	Click to display all wireless clients that are under Station Control.
Hotspot Web Portal	Click to jump to the Hotspot Web Portal page.

To save changes on this page, select **OK**; to discard changes, select **Cancel**.

III-1-9 Bandwidth Management

The downstream or upstream from FTP, HTTP or some P2P applications will occupy large of bandwidth and affect the applications for other programs. Please use Bandwidth Management to make the bandwidth usage more efficient.

Wireless LAN(2.4GHz) >> Bandwidth Management

SSID 1	SSID 2	SSID 3	SSID 4
SSID:	DrayTek		
Enable	<input checked="" type="checkbox"/>		
Bandwidth Limit Type	Per Station Limit ▼		
Upload Limit(Kbps)	Auto Adjustment		
Download Limit(Kbps)	30000		

Note:

1. Download: Traffic going to any station.Upload: Traffic being sent from a wireless station.
2. Allow auto adjustment could make the best utilization of available bandwidth.

OK Cancel

Available settings are explained as follows:

Item	Description
SSID	Display the specific SSID name.
Enable	Check this box to enable the bandwidth management for clients.
Bandwidth Limit Type	Auto Adjustment - Bandwidth limit is determined by the system automatically. Per Station Limit - Bandwidth limit is determined according to the limitation of the wireless client.
Total Upload Limit	It is available when Auto Adjustment is selected. Type a value to define the maximum data traffic (uploading) for all of the wireless clients connecting to Vigor2135.
Total Download Limit	It is available when Auto Adjustment is selected. Type a value to define the maximum data client(stations) connecting to Vigor2135.
Upload Limit	It is available when Per Station Limit is selected. Type a value to define the maximum data traffic (uploading) for each wireless client connecting to Vigor2135ac.
Download Limit	It is available when Per Station Limit is selected Type a value to define the maximum data traffic (downloading) for each wireless client connecting to Vigor2135ac.

To save changes on this page, select **OK**; to discard changes, select **Cancel**.

III-1-10 AP Discovery

Vigor router can scan all regulatory channels to find working APs in the neighborhood. The scanning result can be used to determine the most desirable channel to use, or to locate an AP for establishing a WDS link. Note that during the scanning process (about 5 seconds), no client is allowed to connect to the Vigor. Only APs operating on the same band as the Vigor can be discovered.

Click the **Scan** button to start the AP discovery process.

Wireless LAN(2.4GHz) >> Access Point Discovery

Access Point List

Index	BSSID	Channel	RSSI	SSID	Authentication
1	02:1D:AA:94:ED:E0	11	10%	DrayTek-LAN-B	Mixed (WPA+WPA2) / PSK
2	00:1D:AA:94:ED:E0	11	10%	DrayTek-LAN-A	Mixed (WPA+WPA2) / PSK
3	1A:49:BC:42:4B:B0	11	5%	VigorAP920c-1	WPA2 / PSK

6	14:49:BC:0C:59:E4	11	10%	Vigor2865-PQC-Tang -2	None
7	14:49:BC:0C:59:E2	11	10%	Vigor2865-PQC-Tang -1	WPA2 / PSK
8	1E:49:BC:42:4B:B0	11	5%	VigorAP920c-2	WPA2 / PSK
9	00:1D:AA:80:06:B8	5	0%	910C RD8 Mickey	WPA / PSK

See [Statistics](#).

Note:

1. During the scanning process (~5 seconds), no station is allowed to connect with the router.
2. AP Discovery can only support up to 32 APs displayed on the screen.

Available settings are explained as follows:

Item	Description
Scan	Click to start the AP discovery process. The results will be shown on the box above this button.
Statistics	Shows channel usage by the neighboring APs. <div style="border: 1px solid black; padding: 5px; margin-top: 5px;"> <p style="font-size: small;">Wireless LAN >> Site Survey Statistics</p> <p style="font-size: x-small; text-align: center;">Recommended channels for usage: 1 2 3 4 5 6 7 8 9 10 11 12 13</p> <div style="text-align: center; border: 1px solid gray; padding: 5px; margin: 5px 0;"> <p style="font-size: x-small;">AP number v.s. Channel</p> <p style="font-size: x-small;">Channel</p> </div> <p style="text-align: center; margin-top: 5px;"><input type="button" value="Cancel"/></p> </div>
Add to WDS Settings	This field is available for WLAN (5GHz). Add to - To establish a WDS link to an AP that was found in an AP scan, click its entry in the Access Point List window, and its MAC address will be copied to the AP's MAC address field. Select the WDS mode you wish to use, Bridge, and click Add to . The AP will be configured in Wireless LAN >> WDS Settings .

III-1-11 Airtime Fairness

Airtime fairness is essential in wireless networks that must support critical enterprise applications.

Most of the applications are either symmetric or require more downlink than uplink capacity; telephony and email send the same amount of data in each direction, while video streaming and web surfing involve more traffic sent from access points to clients than the other way around. This is essential for ensuring predictable performance and quality-of-service, as well as allowing 802.11n and legacy clients to coexist on the same network. Without airtime fairness, offices using mixed mode networks risk having legacy clients slow down the entire network or letting the fastest client(s) crowd out other users.

With airtime fairness, every client at a given quality-of-service level has equal access to the network's airtime.

The wireless channel can be accessed by only one wireless station at the same time.

The principle behind the IEEE802.11 channel access mechanisms is that each station has *equal probability* to access the channel. When wireless stations have similar data rate, this principle leads to a fair result. In this case, stations get similar channel access time which is called airtime.

However, when stations have various data rate (e.g., 11g, 11n), the result is not fair. The slow stations (11g) work in their slow data rate and occupy too much airtime, whereas the fast stations (11n) become much slower.

Take the following figure as an example, there are 2 wireless stations on the wireless network, Station A (11g) and Station B (11n), both of which transmit data packets to the Vigor router. Even though they have equal opportunity to access the wireless channel, Station B (11n) gets only a little airtime and waits too much because Station A (11g) takes longer to send one packet. In other words, transmission from Station B (fast rate) is effectively being throttled by Station A (slow rate).

To alleviate this problem, Airtime Fairness tries to assign *similar airtime* to each station (A and B) by controlling TX traffic. In the following figure, Station B (11n) has higher opportunities to send data packets than Station A (11g). In this way, Station B (fast rate) gets its fair share of airtime and its speed is not limited by Station A (slow rate).

This is similar to automatic Bandwidth Limit, where the dynamic bandwidth limit of each station depends on instant active station number and airtime assignment. Please note that Airtime Fairness of 2.4 GHz and 5 GHz bands are independent, but stations connected to different SSIDs on the same band are prioritized as a group, because they all use the same wireless channel. Under certain environments, this function can reduce the adverse effects of slow wireless devices and improve the overall wireless performance.

Environments that can benefit by applying airtime fairness:

- (1) Many wireless stations.
- (2) All stations mainly use download traffic.
- (3) The performance bottleneck is wireless connection.

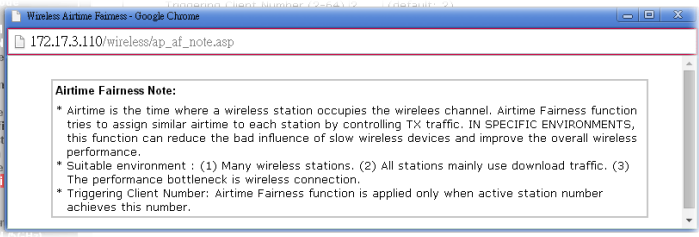

Wireless LAN(2.4GHz) >> Airtime Fairness

Enable **Airtime Fairness**
 Triggering Client Number (2 ~ 64) (Default: 2)

Note:

Please enable or disable this function according to the real situation and user experience. It is NOT suitable for all environments.

Available settings are explained as follows:

Item	Description
Enable Airtime Fairness	<p>Try to assign similar airtime to each wireless station by controlling TX traffic.</p> <p>Airtime Fairness - Click the link to display the following explanation of airtime fairness note.</p> <div style="border: 1px solid gray; padding: 5px; margin: 5px 0;">  </div> <p>Triggering Client Number - Airtime Fairness function is applied only when there are at least this many active wireless stations.</p>

To save changes on this page, select **OK**; to discard changes, select **Cancel**.

Info

Airtime Fairness function and Bandwidth Limit function should be mutually exclusive. So their webs have extra actions to ensure these two functions are not enabled simultaneously.

III-1-12 Band Steering (2.4 GHz)

Band Steering detects if the wireless clients are capable of 5GHz operation, and steers them to that frequency. It helps to [keep the 2.4 GHz band clear for](#) legacy clients, and improves users' experience by [reducing 2.4 GHz](#) channel utilization.

If a dual-band client is detected, the AP will let the wireless client connect to the less congested wireless band, such as the 5GHz band, to [reduce](#) network congestion.

Info

For Band Steering to work properly, the same SSID and security settings must be configured on both 2.4 GHz and 5 GHz bands.

To configure Band Steering, go to the **Wireless LAN (2.4GHz)>>Band Steering** page:

Wireless LAN(2.4GHz) >> Band Steering

<input type="checkbox"/> Enable Band Steering Check Time for WLAN Client 5G Capability <input type="text" value="15"/> second(s) (1 ~ 60) (Default: 15)

Note:

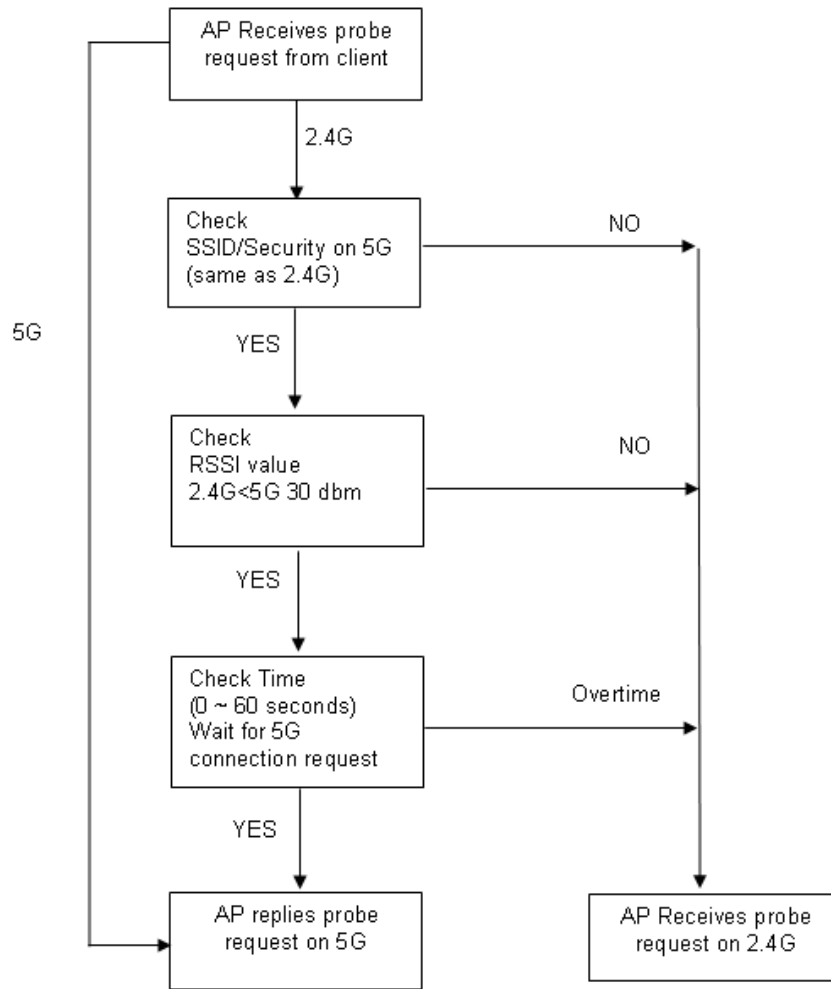

Please setup at least one pair of 2.4GHz and 5GHz Wireless LAN with the same SSID and security.

Available settings are explained as follows:

Item	Description
Enable Band Steering	When enabled, the router will detect if wireless clients are capable of dual-band or not within the time limit. Check Time... - When a wireless client attempts to connect, the router will block attempts to connect to the 2.4 GHz band for the specified period of time (default is 30 seconds), which hopefully will entice the client to connect to the 5 GHz band. If the client fails to connect to the 5 GHz band within the specified interval, it will then be able to connect to the 2.4 GHz band.

To save changes on this page, select **OK**; to discard changes, select **Cancel**.

The following diagram shows how Band Steering works.

Example: How to Use Band Steering?

1. Open Wireless LAN(2.4GHz)>>Band Steering.
2. Check the box of Enable Band Steering and use the default value (15) for check time setting.

Wireless LAN(2.4GHz) >> Band Steering

<input checked="" type="checkbox"/> Enable Band Steering Check Time for WLAN Client 5G Capability <input type="text" value="15"/> second(s) (1 ~ 60) (Default: 15)
--

Note:

Please setup at least one pair of 2.4GHz and 5GHz Wireless LAN with the same SSID and security.

OK Cancel

3. Click OK to save the settings.

- Open **Wireless LAN (2.4GHz)>>General Setup** and **Wireless LAN (5GHz)>> General Setup**. Configure SSID as *DrayTek2865_BandSteering* for both pages. Click OK to save the settings.

Note: Type 8~63 ASCII characters, for example: "cfigs01a2...". For strong passwords: 1. Use at least 12 characters.			

- The Vigor will now steer wireless clients to the less congested wireless band, such as 5GHz to reduce network congestion.

III-1-13 Roaming

WiFi roaming allows wireless stations to switch connections between access points within an area to achieve better coverage and signal quality. It usually is up to the wireless station to switch to another access point with stronger signal strength while it is already connected, but Vigor wireless routers have an AP-assisted client roaming feature that could facilitate roaming on wireless stations. Depending on the roaming configuration, the Vigor monitors the Received Signal Strength Indicator (RSSI) of wireless stations and disconnect stations whose RSSI falls below a certain (configurable) threshold, thus forcing stations to seek out other WiFi hosts to connect to.

To configure wireless roaming settings, go to Wireless LAN >> Roaming.

Wireless LAN(2.4GHz) >> Roaming

Router-assisted Client Roaming Parameters

<input checked="" type="radio"/> Disable RSSI Requirement			
<input type="radio"/> Strictly Minimum RSSI	-73	dBm (42 %)	(Default: -73)
<input type="radio"/> Minimum RSSI	-66	dBm (60 %)	(Default: -66)
with Adjacent AP RSSI over	5	dB	(Default: 5)

Available settings are explained as follows:

Item	Description
Disable RSSI Requirement	The Vigor router does not pay attention to the RSSI level of wireless stations. Selecting this option means the Vigor router will not interfere with the roaming behavior of wireless stations.
Strictly Minimum RSSI	The Vigor router will immediately disconnect the wireless station if its RSSI falls below the configured value.
Minimum RSSI	<p>Minimum RSSI - The Vigor router will disconnect wireless clients whose RSSI falls below the minimum threshold only if there is also a neighboring wireless host (router or AP) that has an RSSI value (defined in the field of With Adjacent AP RSSI over) higher than a certain threshold.</p> <p>In order for this option to work, other wireless hosts connected to the same LAN subnet need to support the exchange of RSSI information with peer wireless hosts via Ethernet.</p> <p>With Adjacent AP RSSI over - Specify a value as a threshold.</p>

To save changes on this page, select **OK**; to discard changes, select **Cancel**.

III-1-14 Station List

Station List provides an overview of all currently connected wireless clients and their status. As an added convenience, you may choose to add a particular wireless client to the Access Control by double clicking its entry in the list to populate the MAC address field, followed by clicking the Add button.

There are 3 tabs on the Station List screen: General, Advanced and Neighbor. Both General and Advanced show wireless stations connected to the Vigor router, whereas Neighbor shows nearby wireless stations connected to other access points that are detected by the Vigor router.

Wireless LAN(2.4GHz) >> Station List

Station List

Add to Access Control :

Client's MAC address : : : : :

Note:

1. Approx. Distance is calculated by actual signal strength of device detected. Inaccuracy might occur based on barrier encountered.
2. Due to the differences in signal strength for different devices, the calculated value of approximate distance also might be different.
3. Trademarks and brand names are the properties of their respective owners.

Part IV VPN

VPN

SSL VPN

Certificate
Management

A Virtual Private Network (VPN) is the extension of a private network that encompasses links across shared or public networks like the Internet. In short, by VPN technology, you can send data between two computers across a shared or public network in a manner that emulates the properties of a point-to-point private link.

It is a form of VPN that can be used with a standard Web browser.

A digital certificate works as an electronic ID, which is issued by a certification authority (CA). It contains information such as your name, a serial number, expiration dates etc., and the digital signature of the certificate-issuing authority so that a recipient can verify that the certificate is real. Here Vigor router support digital certificates conforming to standard X.509.

IV-1 VPN and Remote Access

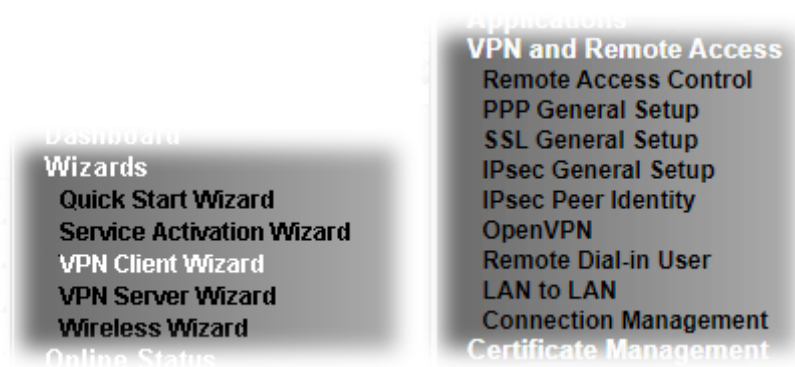

A Virtual Private Network (VPN) is an extension of a private network that allows users to access network resources that available on the private network across shared or public networks such as the Internet, as if users are directly connected to the private network.

Here are some uses of VPNs:

- Communication between home office and customer.
- Secure connection between Teleworker, staff on business trip and main office.
- Exchange data between remote office and main office.
- POS between chain store and headquarters.
- Circumvention of Internet censorship that filters websites or contents.
- Circumvention of geolocation techniques employed by service providers or vendors to block or restrict services to users.
- Secure communications over public access points

Web User Interface

IV-1-1 VPN Client Wizard

The VPN Client Wizard will configure the router as a *client* to connect to a remote VPN server using a LAN-to-LAN VPN tunnel. The wizard will guide you through the setup process.

1. On the menu bar, click on **Wizards**, and then **VPN Client Wizard**.

VPN Client Wizard

Choose VPN Establishment Environment

Please choose a LAN-to-LAN Profile:

Available settings are explained as follows:

Item	Description
Please choose a LAN-to-LAN Profile	The profile used to store this tunnel configuration. Selecting an index that has already been setup previously will result in the existing setup getting overwritten by the wizard.

2. When you finish the mode and profile selection, please click **Next** to open the following page.

VPN Client Wizard

VPN Connection Setting

<p>Security Ranking:</p> <p>Very High IPsec XAuth IPsec IKEv2 EAP (only for NAT Mode) L2TP over IPsec</p> <p>High IPsec IKEv1/IKEv2 SSL</p> <p>Medium PPTP (Encryption)</p> <p>Low L2TP / PPTP (None Encryption)</p>	<p>Throughput Ranking:</p> <p>Very High L2TP / PPTP (None Encryption)</p> <p>High IPsec IKEv2/EAP/IKEv1/XAuth</p> <p>Medium L2TP over IPsec / PPTP (Encryption)</p> <p>Low SSL</p>
LAN-to-LAN VPN Client Mode Selection:	<input type="text" value="Route Mode"/>
Select VPN Type:	<input type="text" value="PPTP (Encryption)"/>
<p>Note:</p> <ol style="list-style-type: none"> 1. Please use Route Mode for typical LAN-to-LAN tunnels. 2. If the remote network is only expecting a single client or IP and is not configured to route the subnet then select NAT Mode. 3. If you are unsure of your configuration select Route Mode. 	

Available settings are explained as follows:

Item	Description
LAN-to-LAN Client Mode Selection	<p>Route Mode - All traffic between the local network and the remote network bear the originating IP addresses. Select this if the VPN server can establish routes to handle inter-LAN traffic routing.</p> <p>NAT Mode - The VPN client (local router) uses a single IP address assigned by the VPN server (remote router) and uses NAT to keep track of the connections. Select this if the VPN server expects only one IP address on the local network to communicate with the remote network.</p>
Select VPN Type	Select a VPN protocol for the LAN-to-LAN tunnel. Different VPN protocols offer different levels of security and performance.

Info

The following descriptions for VPN Type are based on the Route Mode specified in LAN-to-LAN Client Mode Selection.

If you have selected PPTP (None Encryption) or PPTP (Encryption), the following configuration screen appears.

VPN Client Wizard

VPN Client PPTP None Encryption Settings

Cancel

Available settings are explained as follows:

Item	Description
Go to the VPN Connection Management	Proceed to VPN and Remote Access>>Connection Management to manage VPN sessions.
Do another VPN Client Wizard Setup	Rerun the VPN Client Wizard to configure another LAN-to-LAN VPN profile.
View more detailed configuration	Open this profile in VPN and Remote Access>>LAN to LAN to make additional configuration changes.

IV-1-2 VPN Server Wizard

The VPN Server Wizard can be used to set the router up as a *server* that accepts inbound VPN connections from a VPN server using a LAN-to-LAN VPN tunnel.

Site-to-Site (LAN-to-LAN)

- A connection between two router's LAN networks.
- Allows employees in branch offices and head office to share the same network resources.

Remote Access (Remote Dial-in)

- A connection between the remote host and router's LAN network. The host will use an IP address in the local subnet.
- Allows employees to access the company's internal resources when they are traveling.

The wizard will guide you step by step through the setup process.

1. On the menu bar, click on **Wizards**, and then **VPN Server Wizard**.

VPN Server Wizard

Choose VPN Establishment Environment

VPN Server Mode Selection: Site to Site VPN (LAN-to-LAN) ▼

Please choose a LAN-to-LAN Profile: [Index] [Status] [Name] ▼

Please choose a Dial-in User Accounts: [Index] [Status] [Name] ▼

Cancel

Available settings are explained as follows:

Item	Description
VPN Server Mode Selection	Type of VPN Server to be configured. Site to Site VPN (LAN-to-LAN) - Configures the VPN server for inbound connections from other routers. Remote Dial-in User (Teleworker) - Configures VPN server for inbound connections from remote users.
Please choose a LAN-to-LAN Profile	If the VPN Server Mode selected was Site to Site VPN (LAN-to-LAN) , choose a LAN-to-LAN profile to store this configuration.
Please choose a Dial-in User Accounts	If the VPN Server Mode selected was Remote Dial-in User (Teleworker) , choose a Dial-in user profile to store this configuration.
Allowed Dial-in Type	Select all VPN protocols that are allowed for this LAN-to-LAN Profile or Dial-in User Account. Different Dial-in Type will lead to different configuration page. In addition, adjustable items for each dial-in type will be changed according to the VPN Server Mode (Site to Site VPN and Remote Dial-in User) selected.

2. After making the choices for the server profile, please click **Next**.
3. The following dialog box appears, reminding you to not configure IPsec fields if the remote location has a dynamic IP address.

192.168.1.1

If you are using IPsec Main mode and the remote VPN gateway has a dynamic IP address, please don't setup "PeerIP" or "Peer ID" fields, and don't tick "IPsec Authentication". Instead, please go to the VPN and Remote Access >> IPsec General Setup page to setup a common preshared key.

確定

Click OK to dismiss the dialog box and proceed to the next page.

If you have chosen to configure a LAN-to-LAN VPN profile, proceed to step 4.

If you have chosen to configure a Remote Dial-in User VPN profile, proceed to step 5.

4. The Site to Site VPN (LAN-to-LAN) configuration page appears as follows if you have selected PPTP/SSL.

Go to the VPN Connection Management	Proceed to VPN and Remote Access>>Connection Management to manage VPN sessions.
Do another VPN Server Wizard Setup	Rerun the VPN Server Wizard to configure another LAN-to-LAN VPN profile.
View more detailed configuration	Open this profile in VPN and Remote Access>>LAN to LAN to make additional configuration changes.

- Click **Finish** to save the profile, or **Back** to make changes, or **Cancel** to exit the wizard without saving.

IV-1-3 Remote Access Control

The Vigor router supports several protocols for VPNs, all of which can be enabled or disabled independently of one another.

If you intend to run a VPN server inside your LAN, you should disable the VPN service of Vigor Router to allow VPN tunnel pass through, as well as the appropriate NAT settings, such as DMZ or open port. Open **VPN and Remote Access**>>**Remote Access Control**.

VPN and Remote Access >> Remote Access Control Setup

Remote Access Control Setup

<input checked="" type="checkbox"/> Enable PPTP VPN Service
<input checked="" type="checkbox"/> Enable IPSec VPN Service
<input checked="" type="checkbox"/> Enable L2TP VPN Service
<input checked="" type="checkbox"/> Enable SSL VPN Service
<input checked="" type="checkbox"/> Enable OpenVPN Service

Note:

To allow VPN pass-through to a separate VPN server on the LAN, disable any services above that use the same protocol and ensure that NAT [Open Ports](#) or [Port Redirection](#) is also configured.

OK Clear Cancel

Item	Description
Enable PPTP VPN Service	This is the one of the earliest VPN protocols and is natively supported by all Microsoft Windows versions since Windows 95, all Android devices, iOS devices before version 10, and Mac OS X before version 10.12. It is easy to set up, has low overhead, and moderately secure.
Enable IPSec VPN Service	This is a network protocol that encrypts traffic between two network locations. Windows, by means of Windows Firewall, natively supports IPsec tunnels between endpoints with static IP addresses. For computers with dynamically-assigned IP addresses, DrayTek provides the SmartVPN client .
Enable L2TP VPN Service	This is a tunneling protocol used in VPNs. It does not encrypt network traffic unless used in conjunction with IPsec.
Enable SSL VPN Service	This type of VPN uses Secure Sockets Layer (SSL) and Transport Layer Security (TLS), which are also used to encrypt traffic to and from websites. Since SSL and TLS work on top of TCP and UDP, which are the most common internet protocols, they are less likely to be have issues with firewalls and gateways.
Enable OpenVPN Service	This type of VPN offers a convenient way for users to build VPN between local end and remote end.

To save changes on the page, select **OK**; to discard changes, select **Cancel**; to clear settings on this page and revert to default settings, select **Clear**.

IV-1-4 PPP General Setup

This page allows configuration of Point-to-Point Protocol (PPP) used by PPTP and L2TP VPN connections. From the Main Menu select **VPN and Remote Access >> PPP General Setup** to bring up the following configuration page.

VPN and Remote Access >> PPP General Setup

PPP General Setup

<p>PPP/MP Protocol</p> <p>Dial-In PPP Authentication: <input type="text" value="PAP/CHAP/MS-CHAP/MS-CHAPv2"/></p> <p>Dial-In PPP Encryption(MPPE): <input type="text" value="Optional MPPE"/></p> <p>Mutual Authentication (PAP): <input type="radio"/> Yes <input checked="" type="radio"/> No</p> <p>Username: <input type="text" value="Max: 128 characters"/></p> <p>Password: <input type="text" value="Max: 128 characters"/></p> <p>IP Address Assignment for Dial-In Users when DHCP is disabled.</p> <table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th></th> <th>Start IP Address</th> <th>IP Pool Counts</th> </tr> </thead> <tbody> <tr> <td>LAN 1</td> <td><input type="text" value="192.168.1.200"/></td> <td><input type="text" value="50"/></td> </tr> <tr> <td>LAN 2</td> <td><input type="text" value="192.168.2.200"/></td> <td><input type="text" value="50"/></td> </tr> <tr> <td>LAN 3</td> <td><input type="text" value="192.168.3.200"/></td> <td><input type="text" value="50"/></td> </tr> <tr> <td>LAN 4</td> <td><input type="text" value="192.168.4.200"/></td> <td><input type="text" value="50"/></td> </tr> </tbody> </table>		Start IP Address	IP Pool Counts	LAN 1	<input type="text" value="192.168.1.200"/>	<input type="text" value="50"/>	LAN 2	<input type="text" value="192.168.2.200"/>	<input type="text" value="50"/>	LAN 3	<input type="text" value="192.168.3.200"/>	<input type="text" value="50"/>	LAN 4	<input type="text" value="192.168.4.200"/>	<input type="text" value="50"/>	<p>PPP Authentication Methods</p> <p><input checked="" type="checkbox"/> Remote Dial-in User</p> <p><input checked="" type="checkbox"/> RADIUS</p> <p>Note:</p> <ol style="list-style-type: none"> 1. Default priority is Remote Dial-in User -> RADIUS. 2. Vigor router also supports Frame-IP-Address from RADIUS server to assign IP address to VPN client. <p>While using RADIUS Authentication:</p> <p>Assign IP from subnet: <input type="text" value="LAN1"/></p>
	Start IP Address	IP Pool Counts														
LAN 1	<input type="text" value="192.168.1.200"/>	<input type="text" value="50"/>														
LAN 2	<input type="text" value="192.168.2.200"/>	<input type="text" value="50"/>														
LAN 3	<input type="text" value="192.168.3.200"/>	<input type="text" value="50"/>														
LAN 4	<input type="text" value="192.168.4.200"/>	<input type="text" value="50"/>														

Available settings are explained as follows:

Item	Description
Dial-In PPP Authentication	<p>PAP Only - Authenticate dial-in users using the PAP protocol only.</p> <p>PAP/CHAP/MS-CHAP/MS-CHAPv2 - Attempt to authenticate dial-in users using various CHAP protocols, and if the remote VPN client fails to authenticate, fall back to PAP.</p>
Dial-In PPP Encryption (MPPE)	<p>Specifies if PPP encryption (MPPE) is to be used for dial-in VPN connections.</p> <p>Optional MPPE - MPPE is optional. If the VPN client supports MPPE, PPP data will be encrypted.</p> <p>Require MPPE (40/128bits) - Require PPP encryption for dial-in VPN connections. Both 40- and 128-bit encryption schemes are allowed. The remote dial-in user will use 40-bit to perform encryption prior to using 128-bit for encryption. In other words, if 128-bit MPPE encryption method is not available, then 40-bit encryption scheme will be applied to encrypt the data.</p> <p>Maximum MPPE - Require 128-bit PPP encryption for all dial-in VPN connections.</p>
Mutual Authentication (PAP)	<p>Specifies if mutual authentication is to be used. Some VPN peers (e.g., certain Cisco routers) require bi-directional authentication used for providing stronger security.</p> <p>When mutual authentication is enabled, Username and Password fields should also be populated using values from the VPN peer. The maximum lengths of these fields are 23 and 19 characters, respectively.</p> <p>Yes - Enable mutual authentication.</p>

	No - Disable mutual authentication.
IP Address Assignment for Dial-In Users when DHCP is disabled	<p>LAN1 - When the router's DHCP server is disabled, the router will assign IP addresses to dial-in VPN users starting with the IP address specified in Start IP Address. The total number of dial-in VPN IP addresses to be given out is specified in IP Pool Counts.</p> <p>LAN2 ~ LAN4 will be available if it is enabled. Refer to LAN>>General Setup for enabling the LAN interface.</p>
PPP Authentication Methods	<p>The credentials to be used for PPP authentication will be obtained from the selected sources, in the following order:</p> <p>Remote Dial-in User - The usernames and passwords in VPN and Remote Access >> Remote Dial-in User section will be used.</p> <p>RADIUS - An external RADIUS server is to be used for authentication. Please be sure to set up the RADIUS server in Applications >> RADIUS/TACACS+ section.</p>
While using Radius or LDAP Authentication	<p>When the dial-in VPN user is authenticated using credentials from the Remote Dial-in User section, an IP address from the LAN specified in the user profile will be assigned. When the user is authenticated using credentials from other sources (RADIUS), the assigned IP address will be drawn from the address pool of the LAN specified here.</p>

IV-1-5 SSL General Setup

SSL VPN (Secure Sockets Layer virtual private network) is a form of VPN that encrypts traffic using SSL, which is the same technology used on secured websites. Because of SSL's prominence as an encryption protocol on the Internet, most networks have few restrictions on SSL traffic, and as a result SSL VPN is more likely to work when other VPN technologies experience difficulties due to obstacles such as firewalls and Network Address Translation (NAT).

In short,

- It is not necessary for users to preinstall VPN client software for executing SSL VPN connection.
- There are less restrictions for the data encrypted through SSL VPN in comparing with traditional VPN.

This page determines the general configuration for SSL VPN Server and SSL Tunnel.

VPN and Remote Access >> SSL General Setup

SSL General Setup

Bind to WAN	<input checked="" type="checkbox"/> WAN1 <input checked="" type="checkbox"/> WAN3
Port	<input type="text" value="443"/> (Default: 443)
Server Certificate	<input type="text" value="self-signed"/> ▼

Available settings are explained as follows:

Item	Description
Bind to WAN	Select the WAN interfaces to accept inbound SSL VPN connections.
Port	The port to be used for SSL VPN server. This is separate from the management port (HTTPS Port) which is configured in System Maintenance>>Management . The default setting is 443.
Server Certificate	Specify the certificate to be used for SSL connections. Select a certificate from imported or generated certificates on the router, or choose Self-signed to use the router's built-in default certificate. The selected certificate can be used in SSL VPN server and HTTPS Web Proxy.

To save changes on this page, select **OK**; to discard changes, select **Cancel**.

IV-1-6 IPsec General Setup

In IPsec General Setup, there are two major parts of configuration.

There are two phases of IPsec.

- Phase 1: negotiation of IKE parameters including encryption, hash, Diffie-Hellman parameter values, and lifetime to protect the following IKE exchange, authentication of both peers using either a Pre-Shared Key or Digital Signature (x.509). The peer that starts the negotiation proposes all its policies to the remote peer and then remote peer tries to find a highest-priority match with its policies. Eventually to set up a secure tunnel for IKE Phase 2.
- Phase 2: negotiation IPsec security methods including Authentication Header (AH) or Encapsulating Security Payload (ESP) for the following IKE exchange and mutual examination of the secure tunnel establishment.

There are two encapsulation methods used in IPsec, **Transport** and **Tunnel**. The **Transport** mode will add the AH/ESP payload and use original IP header to encapsulate the data payload only. It can just apply to local packet, e.g., L2TP over IPsec. The **Tunnel** mode will not only add the AH/ESP payload but also use a new IP header (Tunneled IP header) to encapsulate the whole original IP packet.

AH (Authentication Header) provides data authentication and integrity for IP packets passed between VPN peers. This is achieved by a keyed one-way hash function to the packet to create a message digest. This digest will be put in the AH and transmitted along with packets. On the receiving side, the peer will perform the same one-way hash on the packet and compare the value with the one in the AH it receives.

ESP (Encapsulating Security Payload) is a security protocol that provides data confidentiality and protection with optional authentication and replay detection service.

VPN and Remote Access >> IPsec General Setup

VPN IKE/IPsec General Setup

(Dial-in settings for Remote Dial-In users and LAN-to-LAN VPN Client with Dynamic IP.)

IKE Authentication Method	
Certificate	None ▼
Preferred Local ID	Alternative Subject Name ▼
General Pre-Shared Key	Max: 64 characters
Confirm General Pre-Shared Key	
XAuth User Pre-Shared Key	Max: 64 characters
Confirm XAuth User Pre-Shared Key	
IPsec Security Method	
<input checked="" type="radio"/> Basic	<input type="radio"/> Medium
<input type="radio"/> High	
Encryption: AES/3DES/DES	
HMAC: SHA256/SHA1	
DH Group: G21/G20/G19/G14/G5/G2/G1	
AH: <input checked="" type="checkbox"/> Enable	

OK

Cancel

Available settings are explained as follows:

Item	Description
IKE Authentication Method	<p>This usually applies to those are remote dial-in user or node (LAN-to-LAN) which uses dynamic IP address and IPsec-related VPN connections such as L2TP over IPsec and IPsec tunnel. There are two methods offered by Vigor router for you to authenticate the incoming data coming from remote dial-in user, Certificate (X.509) and Pre-Shared Key.</p> <p>Certificate - X.509 certificates can be used for IKE authentication. To set up certificates on the router, go to the Certificate Management section.</p> <p>Preferred Local ID - Specify the preferred local ID information (Alternative Subject Name First or Subject Name First) for IPsec authentication while the client is using the general setting (without a specific Peer IP or ID in the VPN profile).</p> <p>General Pre-Shared Key- Define the PSK key for general authentication.</p> <p>Confirm General Pre-Shared Key- Re-enter the characters to confirm the pre-shared key.</p> <p>XAuth User Pre-Shared Key - Define the PSK key for IPsec XAuth authentication.</p> <p>Confirm XAuth User Pre-Shared Key- Re-enter the characters to confirm the pre-shared key for IPsec XAuth authentication.</p> <p>Note: Any packets from the remote dial-in user which does not match the rule defined in VPN and Remote Access>>Remote Dial-In User will be applied with the method specified here.</p>
IPsec Security Method	<p>Available methods include Basic, Medium and High. Each method offers different encryption, HMAC and DH Group.</p> <p>Basic - Authentication Header (AH) means data will be authenticated, but not be encrypted. By default, this option is active.</p> <p>Medium - When this option is selected, the Authentication Header (AH) protocol can be used to provide authentication to IPsec traffic.</p> <p>High - When this option is selected, the Encapsulating Security Payload (ESP) protocol can be used to provide authentication and encryption to IPsec traffic. Three encryption standards are supported for ESP: DES, 3DES and AES, in ascending order of security.</p>

To save changes on the page, select **OK**; to discard changes, select **Cancel**.

IV-1-7 IPsec Peer Identity

This screen allows creating profiles of subject alternative names (SANs) and distinguished names/subject names that can be used for IPsec peer authentication in LAN-to-LAN or remote user dial-in VPN connections.

IV-1-8 OpenVPN

The OpenVPN protocol utilizes public keys, certificates, and usernames and passwords to authenticate the client. Traffic is carried over secure channels built upon industry-standard SSL/TLS encryption protocols.

With integrating of OpenVPN, Vigor router can help users to achieve more robust, reliable and secure private connections for business needs.

OpenVPN offers a convenient way for users to build a VPN between the local end and the remote end. There are two advantages of OpenVPN:

- It can be operated on different systems such as Windows, Linux, and MacOS.
- Based on the standard protocol of SSL encryption, OpenVPN can provide you with a scalable client/server mode, permitting multi-client to connect to a single OpenVPN Server process over a single TCP or UDP port.

In terms of credentials, the administrator can choose to let the router generate the certificates, or import certificates issued by third-party certificate authorities (CAs). When the router generates the certificates, it acts as the root CA to issue the trusted CA certificates (stored under Certificate Management >> Trusted CA Certificate), which are used to generate the server and client certificates used by OpenVPN (stored under Certificate Management >> Local Certificate). If, however, a certificate issued by a third-party CA is used, both the CA's certificate and the issued certificate need to be imported to the router in the Trusted CA Certificate and Local Certificate sections, respectively.

IV-1-8-1 OpenVPN Server Setup

OpenVPN requires the use of certificates. Before establishing OpenVPN connection, general settings for OpenVPN service shall be configured first.

OpenVPN Server Setup	Client Config	Import Certificate
General Setup		
UDP	<input checked="" type="checkbox"/> Enable	
UDP Port	<input type="text" value="1194"/>	
TCP	<input checked="" type="checkbox"/> Enable	
TCP Port	<input type="text" value="1194"/>	
Cipher Algorithm	<input type="text" value="AES128"/>	
HMAC Algorithm	<input type="text" value="SHA1"/>	
Certificate Authentication	<input type="checkbox"/>	
Certificates Setup		
Certificate Source	<input type="radio"/> Router generated certificates	
	<input checked="" type="radio"/> Uploading certificates to Router	
Trust CA	<input type="text" value="default"/>	
Server Certificate	<input type="text" value="none"/>	

Note: OpenVPN on Vigor Router only support TUN device interface currently. So please setup corresponding configurations on the client side.

OK

Available settings are explained as follows:

Item	Description
General Setup	
UDP	<p>Enable - Select checkbox to enable UDP protocol for OpenVPN connections.</p> <p>UDP Port - Enter the UDP port number.</p>
TCP	<p>Enable - Select checkbox to enable TCP protocol for OpenVPN connections.</p> <p>TCP Port - Enter the TCP port number.</p>
Cipher Algorithm	Select the desired cipher algorithm. Two encryption algorithms are supported: AES128 and AES256. AES256 is more secure than AES128 but may result in lower performance because it incurs higher computational overhead.
HMAC Algorithm	<p>HMAC stands for Hash-based Message Authentication Code. It is used to validate the data integrity and authenticity of the VPN data.</p> <p>Select the desired HMAC hash algorithm. Two hash algorithms, SHA1 and SHA256, are supported. SHA256 is preferred as it is more robust and reliable than SHA1.</p>
Certificate Authentication	Select this checkbox if you would like to validate that the client certificate was issued by a trusted CA.
Certificate Setup	
Certificate Source	Select a source for the certificate to be used for OpenVPN. Router generated certificates - Router-generated

	<p>certificates that will be used for OpenVPN.</p> <ul style="list-style-type: none">● GENERATE - Click to generate a certificate.● Delete all certificate - Click to remove all certificates generated by the router. <p>Uploading certificates to Router - Third-party certificates will be used for OpenVPN.</p> <ul style="list-style-type: none">● Trust CA - Use the dropdown list to select a trusted CA certificate that has already been uploaded to the router. To upload Trusted CA certificates to the router, click the Trust CA label and you will be taken to the Certificate Management >> Trusted CA Certificate page to perform the operation.● Server Certificate - Use the dropdown list to select a server certificate that has already been uploaded to the router. To upload server certificates to the router, click the Server Certificate label and you will be taken to the Certificate Management >> Local Certificate page to perform the operation.
--	--

After finishing all the settings here, please click **OK** to save the configuration.

IV-1-8-2 Client Config

On this page, you can create and export the configuration required for a remote OpenVPN client to connect to the router.

VPN and Remote Access >> OpenVPN

OpenVPN Server Setup	Client Config	Import Certificate
Remote Server	<input checked="" type="radio"/> IP <input type="radio"/> Domain	<input type="text"/> <input type="text"/>
Transport Protocol	<input type="text" value="TCP"/>	
Auto Dial-Out	<input checked="" type="radio"/> Enable <input type="radio"/> Disable	
Set VPN as Default Gateway	<input checked="" type="radio"/> Enable <input type="radio"/> Disable	
File Name	<input type="text"/> .ovpn	

Note:

1. Please make sure the Client cert and the Client key are located in the same folder with .ovpn file.
2. Please make sure that WAN can be used as OpenVPN server.

Export

Available settings are explained as follows:

Item	Description
Remote Server	<p>The OpenVPN client will use the IP address or domain name to connect to the router. Select either IP or Domain.</p> <p>IP - The OpenVPN configuration file will use the numeric IP address as the server address.</p> <p>Domain - The OpenVPN configuration file will use the domain as the server address. You need to ensure that the domain resolves to the IP address of a router WAN port.</p>
Transport Protocol	<p>Select UDP or TCP for the protocol to be used by the OpenVPN client to connect to the router.</p>
Auto Dial-Out	<p>Enable - If selected, the remote client can auto-dial to this Vigor router to build an OpenVPN tunnel.</p> <p>Disable - Select to disable the function.</p>
Set VPN as Default Gateway	<p>Enable - If selected, the Vigor router will be treated as a "default" gateway for OpenVPN clients. The OpenVPN client will redirect all the traffic to the Vigor router via the OpenVPN tunnel.</p> <p>Disable - Select to disable the function.</p>
File Name	<p>Enter the filename of the configuration file to be downloaded from the router.</p>
Export	<p>Click this button to download the settings on this page as a file, which can be imported into a VPN client to establish OpenVPN connections.</p>

IV-1-8-3 Import Certificate

On this page, you can import the certificate from other places for a remote OpenVPN client to connect to the router.

VPN and Remote Access >> OpenVPN

OpenVPN Server Setup | **Client Config** | **Import Certificate**

Import OpenVPN config file
Note:
1. TLS-auth key won't be deleted even you load the .rst firmware.
2. Please clear the LAN-to-LAN Profile if you want to delete the TLS-auth key.

Select a OpenVPN config file.

未選擇任何檔案

Click [Import](#) to upload the certificate.

Import X509 Local / Trusted CA Certificate
Note:
1. Please setup the "System Maintenance >> [Time and Date](#)" correctly before signing the local/trusted CA certificate.
2. The Time Zone MUST be setup correctly!!

Available settings are explained as follows:

Item	Description
Select an OpenVPN config file	Browse - Click to select a file. Import - Click to import a configuration file.
Import Local Certificate	Click to access into Local Certificate page for importing a certificate.
Import Trusted CA Certificate	Click to access into Trusted CA Certificate page for importing a certificate.

IV-1-9 Remote Dial-in User

You can manage remote access by maintaining a table of remote user profiles, so that users can be authenticated via VPN connection.

Remote dial-in user profiles can be set up on this screen.

VPN and Remote Access >> Remote Dial-in User

Remote Access User Accounts: | [Set to Factory Default](#) |

---	--

- Note:**
1. Username can not contain characters '\ ' and \ .
 2. OpenVPN tunnel does not support mOTP.

Available settings are explained as follows:

Item	Description
User account and Authentication	<p>Enable this account - Select to enable this profile to be used by remote dial-in users.</p> <p>Idle Timeout - Allowed idle time before the router disconnects the VPN connection. Default timeout value is 300 seconds.</p>
Allowed Dial-In Type	<p>Select all VPN protocols allowed for this profile.</p> <p>For L2TP, specify how IPsec should be applied. Options are:</p> <ul style="list-style-type: none"> ● None - IPsec cannot be used with L2TP connections. ● Nice to Have - IPsec is preferred but not mandatory for L2TP connections. ● Must - IPsec is required when establish L2TP connections.

	<p>Specify Remote Node - The IP address of the remote VPN client (Remote Client IP) or the Peer ID (used in IKE aggressive mode) can be optionally specified. The router will reject the connection if either of these values are entered in the profile but the remote client does not pass the value, or passes the wrong value.</p> <p>Netbios Naming Packet - Specifies whether to allow NetBIOS naming packets to traverse through the VPN tunnel.</p> <ul style="list-style-type: none"> ● Pass - Click it to have an inquiry for data transmission between the hosts located on both sides of VPN Tunnel while connecting. ● Block - When there is conflict occurred between the hosts on both sides of VPN Tunnel in connecting, such function can block data transmission of Netbios Naming Packet inside the tunnel. <p>Multicast via VPN - Specifies whether to allow multicast packets to traverse through the VPN tunnel.</p> <ul style="list-style-type: none"> ● Pass - Click this button to let multicast packets pass through the router. ● Block - This is default setting. Click this button to let multicast packets be blocked by the router.
Subnet	<p>The VPN client will receive an IP address from the DHCP pool or IP address range specified in IP Address Assignment for Dial-In Users for the selected LAN subnet.</p> <p>Assign Static IP Address - Alternatively, a static IP address can be set by selecting the Assign Static IP Address checkbox.</p> <p>User Name - Used for PPTP, L2TP or SSL Tunnel dial-in type. The length of the name is limited to 23 characters.</p> <p>Password - Used for PPTP, L2TP or SSL Tunnel dial-in type. The length of the password is limited to 19 characters.</p> <p>Enable Mobile One-Time Passwords (mOTP) - Select to enable one-time passwords (Mobile-OTP). Enter the PIN Code and Secret. DrayTek's SmartVPN client has built-in support for mOTP. Third-party mOTP clients can be used to generate passwords when using other VPN clients. For more information on mOTP, visit Mobile-OTP's homepage.</p> <ul style="list-style-type: none"> ● PIN Code - Enter the code for authentication (e.g., 1234). ● Secret - Use the 32 digit-secret number generated by mOTP in the mobile phone (e.g., e759bb6f0e94c7ab4fe6).
IKE Authentication Method	<p>Pre-Shared Key - This checkbox is available when Remote Client IP or Peer ID is specified. Check the checkbox and click IKE Pre-shared Key to enter an IKE PSK (1~63 characters) that will be used only for this profile.</p> <p>Digital Signature (X.509) - To enable authentication using X.509 Peer IDs, check the checkbox then select an X.509 profile. X.509 profiles can be configured in VPN and Remote Access >> IPsec Peer Identity.</p>
IPsec Security Method	<p>Select all the IPsec protocols that are allowed to be used for this profile.</p> <p>Medium-Authentication Header (AH) means data will be authenticated, but not be encrypted. By default, this option is invoked. You can uncheck it to disable it.</p> <p>High (ESP) - High-Encapsulating Security Payload (ESP)</p>

	means payload (data) will be encrypted and authenticated. You may select encryption algorithm from Data Encryption Standard (DES), Triple DES (3DES), and AES. Local ID (Optional) - Specify a local ID to be used when establishing a LAN-to-LAN VPN connection using IKE aggressive mode.

Change default route to

Pass packets from LAN in Routing mode to VPN

Pass Packets to WAN when VPN disconnects

OK

Cancel

Backup setting to file:

Upload From File: 未選擇任何檔案

Available settings are explained as follows:

Item	Description
Set to Factory Default	Click to clear all indexes.
Index	Click the index number of the profile to view or edit its settings.
Enable	Check to enable the LAN-to-LAN VPN profile.
Always On	Check to make the dial-out connection always on.
Name	Displays the name of the LAN-to-LAN profile. The symbol ??? represents that the profile is empty.
Remote Network	Displays the name of the remote network.
Status	Shows the status of the profile. Online - LAN-to-LAN VPN is connected.

	Offline - LAN-to-LAN VPN is disconnected. --- - Profile is disabled.
Change default route to	Select a profile as the default route.
Pass packets from LAN in Routing mode to VPN	If enabled, the packets from LAN will pass through the VPN tunnel.
Pass Packets to WAN when VPN disconnects	If enabled, the packets can pass through via WAN when the VPN disconnects.
Backup	Click Backup to save the configuration.
Restore	Click Select to choose a configuration file. Then click Restore to apply the file.

To edit each profile, click each index to edit each profile.

1. The setup screen is shown after a profile index has been clicked. There are 6 sections: Common Settings, Dial-Out Settings, Dial-In Settings, and TCP/IP Network Settings.

Profile Index : 1

Available settings are explained as follows:

Item	Description
Common Settings	Enable this profile - Select to enable the profile. Profile Name - Specify a name that allows you to identify this profile. Call Direction - Specify the allowed call direction of this LAN-to-LAN profile. Four choices are available for connection mode: <ul style="list-style-type: none"> ● Both - Profile is to be used to initiate (dial out) or accept (dial in) connections. ● Dial-Out - Profile is to be used to initiate outgoing connections. ● Dial-In - Profile is to be used to accept incoming connections.

	<p>Dial-Out Through - Select the WAN connection for connections made using this profile. This setting is useful for dial-out only.</p> <ul style="list-style-type: none"> ● WANx First - While connecting, the router will use WANx as the first channel for VPN connection. If WANx fails, the router will use another WAN interface instead. ● WANx Only - While connecting, the router will use WANx as the only channel for VPN connection. <p>Always On - Select this option to maintain an always on dial-out connection.</p> <p>Idle Timeout - The router will close connection if no activity is observed in the VPN connection for this many seconds. Default value is 300 seconds.</p> <p>Netbios Naming Packet - Specifies whether to allow NetBIOS naming packets to traverse through the VPN tunnel.</p> <ul style="list-style-type: none"> ● Pass - click it to have an inquiry for data transmission between the hosts located on both sides of VPN Tunnel while connecting. ● Block - When there is conflict occurred between the hosts on both sides of VPN Tunnel in connecting, such function can block data transmission of Netbios Naming Packet inside the tunnel. <p>Multicast via VPN - Specifies whether to allow multicast packets to traverse through the VPN tunnel.</p> <ul style="list-style-type: none"> ● Pass - Click this button to let multicast packets pass through the router. ● Block - This is default setting. Click this button to let multicast packets be blocked by the router.
Dial-Out Settings	<p>VPN Server - Select the VPN protocol to be used.</p> <p>Server IP/Host Name - IP address or DNS host name of remote VPN host.</p> <p>Dial-Out Schedule Profile - Connect and disconnect according to schedule profiles. The default setting of this field is blank and the function will always work.</p> <p>User Name - Enter a username for establishing VPN connection.</p> <p>Password - Enter the password for establishing VPN connection.</p> <p>PPP Advanced Settings - Click it to expand the advanced settings for PPP.</p> <ul style="list-style-type: none"> ● PPP Authentication - PAP Only - Authenticate dial-in users using the PAP protocol only. PAP/CHAP/MS-CHAP/MS-CHAPv2 - Attempt to authenticate dial-in users using various CHAP protocols, and if the remote VPN client fails to authenticate, fall back to PAP. ● VJ compression - Specifies whether to enable Van Jacobson (VJ) header compression, which improves throughput on slow connections. ● Request IP Address - Enter the IP address.
Dial-In Settings	<p>Allowed VPN Type - Select permissible VPN protocols for dial-in connections.</p> <ul style="list-style-type: none"> ● PPTP - Allow the remote dial-in user to make a PPTP VPN connection through the Internet. You should set

the User Name and Password of remote dial-in user below.

- **IPsec Tunnel**- Allow the remote dial-in user to trigger an IPsec VPN connection through Internet.
- **L2TP with IPsec Policy** - Allow the remote dial-in user to make a L2TP VPN connection through the Internet. You can select to use L2TP alone or with IPsec. Select from below:
 - **None** - Do not apply the IPsec policy. Accordingly, the VPN connection employed the L2TP without IPsec policy can be viewed as one pure L2TP connection.
 - **Nice to Have** - Apply the IPsec policy first, if it is applicable during negotiation. Otherwise, the dial-in VPN connection becomes one pure L2TP connection.
 - **Must** - Specify the IPsec policy to be definitely applied on the L2TP connection.
- **SSL/OpenVPN Tunnel**- Allow the remote dial-in user to trigger an SSL/OpenVPN VPN connection through Internet.

Specify Remote VPN Gateway - You can specify the IP address of the remote dial-in user or peer ID (should be the same with the ID setting in dial-in type) by checking the box. Also, you should further specify the corresponding security methods on the right side.

If you uncheck the checkbox, the connection type you select above will apply the authentication methods and security methods in the general settings.

Username - This field is applicable when you select PPTP or L2TP with or without IPsec policy above. The length of the name is limited to 11 characters.

Password - This field is applicable when you select PPTP or L2TP with or without IPsec policy above. The length of the password is limited to 11 characters.

PPP Advanced Settings - Click it to expand the advanced settings for PPP.

- **VJ Compression** - Specifies whether to enable Van Jacobson header compression, which improves throughput on slow connections.
- **Assign Peer IP Address** - Enter the IP address of the peer.

Allowed IKE Authentication Method - This section is available when IPsec tunnel is selected as the dial-out protocol. Available options are IKE Pre-shared key and X.509 digital signature.

- **Pre-Shared Key** - To use a pre-shared key, select this radio-button and then click the IKE Pre-Shared Key button to enter the PSK.
- **X.509 Digital Signature** - To use an X.509 digital signature, select this radio button and then select an X.509 IPsec Peer Identity profile. To enable authentication using X.509 Peer IDs. X.509 profiles can be configured in **VPN and Remote Access >> IPsec Peer Identity**.

Preferred Local ID - Select whether to first match

	<p>Subject Alternative Name or Subject Name during authentication.</p> <ul style="list-style-type: none"> ● Alternative Subject Name - The alternative subject name (configured in Certificate Management>>Local Certificate) will be inspected first. ● Subject Name - The subject name (configured in Certificate Management>>Local Certificate) will be inspected first. <p>Allowed IPsec Security Method - This setting is available when IPsec Tunnel is selected as the dial-out protocol.</p> <ul style="list-style-type: none"> ● AH- Authentication Header (AH) means data will be authenticated, but not be encrypted. Select to use Authentication Header protocol. By default, this option is active. ● ESP-DES/ESP-3DES/ESP-AES - Encapsulating Security Payload (ESP) means payload (data) will be encrypted and authenticated. You may select encryption algorithm from Data Encryption Standard (DES), Triple DES (3DES), and AES.
<p>TCP/IP Network Settings</p>	<p>This section configures the whether the local router applies NAT when linking the local network to the remote network, and whether IP address translation occurs when.</p> <p>The view changes depending on the setting of the field From first subnet to remote network, you have to do. Select NAT if the remote VPN server expects only one IP address on the local network; otherwise, select Route. TCP/IP Network Settings has different settings depending on whether NAT or Route mode is selected.</p> <p>Local Network - The default value is 0.0.0.0, which means the Vigor router will get a PPP IP address from the remote router during the IPCP negotiation phase. If the PPP IP address is fixed by remote side, specify the fixed IP address here. Do not change the default value if you do not select PPTP or L2TP.</p> <ul style="list-style-type: none"> ● IP / Mask - Display the local network IP and mask for TCP / IP configuration. You can modify the settings if required. <p>Remote Network - The default value is 0.0.0.0, which means the Vigor router will get a remote Gateway PPP IP address from the remote router during the IPCP negotiation phase. If the PPP IP address is fixed by remote side, specify the fixed IP address here. Do not change the default value if you do not select PPTP or L2TP.</p> <ul style="list-style-type: none"> ● IP/ Mask - Add a static route to direct all traffic destined to this Remote Network IP Address/Remote Network Mask through the VPN connection. For IPsec, this is the destination clients IDs of phase 2 quick mode. <p>More Remote Subnet - Click to bring up a dialog box to enter additional static routes for subnets destined for the remote network.</p>

Local Network
 IP / Mask

Remote Network
 IP / Mask

More Remote Subnet

Network IP

Subnet Mask

Create a unique SA for each subnet (IPsec)

Mode - If the remote network only allows one IP address for the local network, select **NAT**; otherwise, select **Route**.

RIP via VPN - Specifies the direction of Routing Information Protocol (RIP) packets. Available options are:

- TX/RX Both - can transmit or receive RIP packets
- TX Only - can only transmit but not receive RIP packets
- RX Only - can only receive but not transmit RIP packets
- Disable - RIP is disabled.

When the Mode is set to Routing

When **Routing** is selected, the available fields in the TCP/IP Network Settings section will be shown as:

Translate Local Network - Check the box to enable the function. Add a static route to direct all traffic destined to more Remote Network IP Addresses/ Remote Network Mask through the VPN connection. This is usually used when you find there are several subnets behind the remote VPN router.

- **Type** - There are two types (**Translate Whole Subnet**, **Translate Specific IP**) for you to choose.

When **Translate Whole Subnet** is selected as **Type**, available settings are listed as below:

Type

Local Subnet

Translated IP

More Local Subnet

Local Network

Translated to

- **Local Subnet** - Select the LAN whose IP addresses are to be translated.
- **Translated IP** - Specify an IP address.
- **More Local Subnet** - Click it to add more subnets.

When **Translate Specific IP** is selected as **Type**, available settings are listed as below:

	<p>Type Translate Specific IP ▼</p> <div style="border: 1px solid gray; padding: 5px;"> <p>Virtual IP Mapping</p> <div style="border: 1px solid gray; height: 80px; margin-bottom: 5px;"></div> <p>Local IP <input style="width: 100px;" type="text"/> Virtual IP <input style="width: 100px;" type="text"/></p> <p style="text-align: center;"> <input type="button" value="Add"/> <input type="button" value="Delete"/> <input type="button" value="Edit"/> </p> </div> <p>- Virtual IP Mapping - A pop up dialog will appear for you to specify the local IP address and the mapping virtual IP address.</p>
<p>When the Mode is set to NAT</p>	<p>When NAT is selected, the available fields in the TCP/IP Network Settings section will be shown as:</p> <p>RIP via VPN - Specifies the direction of Routing Information Protocol (RIP) packets. Available options are:</p> <ul style="list-style-type: none"> ● TX/RX Both - can transmit or receive RIP packets ● TX Only - can only transmit but not receive RIP packets ● RX Only - can only receive but not transmit RIP packets ● Disable - RIP is disabled. <p>Change Default Route to this VPN tunnel - Select this option to direct all traffic that is not LAN-bound to this VPN tunnel. This option is functional when there is only one active WAN.</p>

2. To save changes on the LAN to LAN profile page, select **OK**; to reset the entire page to blank, select **Clear**; to discard changes, select **Cancel**.

IV-1-11 Connection Management

You can initiate outbound LAN-to-LAN VPN sessions, and view and disconnect all current LAN-to-LAN and dial-up VPN sessions.

VPN and Remote Access >> Connection Management

VPN	Type	Remote IP	Virtual Network	Tx Pkts	Tx Rate(bps)	Rx Pkts	Rx Rate(bps)	UpTime

xxxxxxxx : Data is encrypted.
xxxxxxxx : Data isn't encrypted.

Available settings are explained as follows:

Item	Description
Refresh	Click to manually reload the page to refresh VPN connection information.
Dial-out Tool	Dial - Click this button to execute dial out function. If the connect is successfully made, it will show up in the VPN Connection Status section below.
VPN Connection Status	<p>VPN - Displays the VPN profile number and the profile name.</p> <p>Type - Displays the VPN protocol used for the connection</p> <p>Remote IP - Displays the remote IP address of the VPN connection.</p> <p>Virtual Network - Displays the IP subnet used by the VPN connection.</p> <p>Tx Pkts - Displays the number of packets that have been transmitted through the VPN connection.</p> <p>Tx Rate(Bps) - Displays the current upstream speed of the VPN connection.</p> <p>Rx Pkts - Displays the number of packets that have been received through the VPN connection.</p> <p>Rx Rate(Bps) - Displays the current downstream speed of the VPN connection.</p> <p>UpTime - Displays the elapsed time of the VPN connection.</p> <p>Drop - Click this button to disconnect this VPN connection.</p>

IV-2 Certificate Management

A digital certificate is an electronic document issued by a certification authority (CA) to an entity to prove ownership of a public key. It contains identifying information including the issued-to party's name, a serial number, expiration dates etc., and the digital signature of the certificate-issuing authority so that a recipient can verify that the certificate is real. Vigor router supports digital certificates that conform to the X.509 standard.

In this section, you can generate and manage local digital certificates, and import trusted CA certificates. Be sure that the system time is correct on the router so that certificates will not be erroneously considered to be invalid because of an incorrect system time falling outside of the certificate's valid time period. The easiest way to accomplish this is by periodically synchronizing the system time to a Network Time Protocol (NTP) server.

Web User Interface

The image below shows the menu items for Certificate Management.

IV-2-1 Local Certificate

You can generate, import or view local certificates on this page.

Certificate Management >> Local Certificate

X509 Local Certificate Configuration

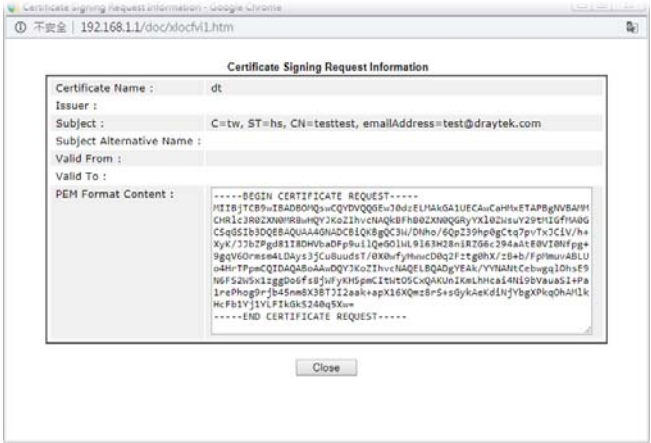

Name	Subject	Status	Modify	
---	---	---	<input type="button" value="View"/>	<input type="button" value="Delete"/>
---	---	---	<input type="button" value="View"/>	<input type="button" value="Delete"/>
---	---	---	<input type="button" value="View"/>	<input type="button" value="Delete"/>

Note:

1. Please setup the "System Maintenance >> **Time and Date**" correctly before signing the local certificate.
2. The Time Zone **MUST** be setup correctly!!

Available settings are explained as follows:

Item	Description
Name	Displays the Name that identifies the certificate.
Subject	Displays the Subject Name entries of the certificate.
Status	Displays the status of the certificate. Status is one of Requesting.
Modify	View - Click to view details about the certificate. A screen that looks like the following will be displayed, showing the Subject Name, Subject Alternative Name, and the certificate content.

	
	Delete - Click to remove the certificate.
Generate	Click to fill out details about a certificate, and start the generation process.
Import	Click to update an existing certificate.
Refresh	Click to refresh the page to display the latest certificate information.

GENERATE

Use this screen to submit a request to your root CA to generate a certificate.

Certificate Management >> Local Certificate

Generate Certificate Signing Request

Certificate Name	<input type="text"/>
Subject Alternative Name	
Type	IP Address <input type="button" value="v"/>
IP	<input type="text"/>

IMPORT

Vigor router allows you to generate a certificate request and submit it the CA server, then import it as "Local Certificate". If you have already gotten a certificate from a third party, you may import it directly. The supported types are PKCS12 Certificate and Certificate with a private key.

Click this button to import a saved file as the certification information. There are three types of local certificate supported by Vigor router.

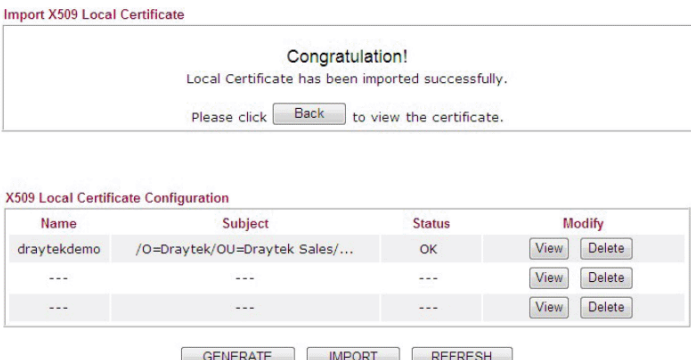

Import X509 Local Certificate

Upload Local Certificate
 Select a local certificate file.
 Certificate file:
 Click **Import** to upload the local certificate.

Upload PKCS12 Certificate
 Select a PKCS12 file.
 PKCS12 file:
 Password:
 Click **Import** to upload the PKCS12 file.

Upload Certificate and Private Key
 Select a certificate file and a matchable Private Key.
 Certificate file:
 Key file:
 Password:
 Click **Import** to upload the local certificate and private key.

Available settings are explained as follows:

Item	Description																
Upload Local Certificate	<p>Certificate file - Click Browse to select a local certificate file. Import - Click to import selected certificate file to router. Cancel - Click to return to the main Local Certificate screen. If you have done well in certificate generation, the Status of the certificate will be shown as "OK".</p>  <p>The screenshot shows a 'Congratulation!' message: 'Local Certificate has been imported successfully. draytekdemo	/O=Draytek/OU=Draytek Sales/...	OK	<input type="button" value="View"/> <input type="button" value="Delete"/>														
---	---	---	<input type="button" value="View"/> <input type="button" value="Delete"/>														
---	---	---	<input type="button" value="View"/> <input type="button" value="Delete"/>														
Upload PKCS12 Certificate	<p>It allows users to import the certificate whose extensions are usually .pfx or .p12. And these certificates usually need passwords. Note that PKCS12 is a standard for storing private keys and certificates securely. It is used in (among other things) Netscape and Microsoft Internet Explorer with their import and export options. PKCS12 file - Click Browse to select a PKCS12 certificate file. Password - Enter the password associated with the certificate and key files. Import - Click to import selected certificate file to router.</p>																

	Cancel - Click to return to the main Local Certificate screen.
Upload Certificate and Private Key	<p>It is useful when users have separated certificates and private keys. And the password is needed if the private key is encrypted.</p> <p>Certificate file - Click Browse to select a local certificate file.</p> <p>Key file -</p> <p>Password - Enter the password associated with the certificate and key files.</p> <p>Import - Click to import selected certificate file to router.</p> <p>Cancel - Click to return to the main Local Certificate screen.</p>

If the import was successful, you will see the following confirmation screen:

Import X509 Local Certificate

Congratulation!

Local Certificate has been imported successfully.

Please click to view the certificate.

---	---	---	<input type="button" value="View"/>	<input type="button" value="Delete"/>

REFRESH

Click this button to refresh the information listed below.

IV-2-2 Trusted CA Certificate

Trusted CA certificate lists three sets of trusted CA certificate. In addition, you can build a RootCA certificate if required.

When the local client and remote client are required to make certificate authentication (e.g., IPsec X.509) for data passing through SSL tunnel and avoiding the attack of MITM, a trusted root certificate authority (Root CA) will be used to authenticate the digital certificates offered by both ends.

However, the procedure of applying digital certificate from a trusted root certificate authority is complicated and time-consuming. Therefore, Vigor router offers a mechanism which allows you to generate root CA to save time and provide convenience for general user. Later, such root CA generated by DrayTek server can perform the issuing of local certificate.

Info

Root CA can be deleted but not edited. If you want to modify the settings for a Root CA, please delete the one and create another one by clicking Create Root CA.

You can create, import and view root and trusted certificate authority certificates on this screen.

Certificate Management >> Trusted CA Certificate

X509 Trusted CA Certificate Configuration

Name	Subject	Status	Modify
	---	---	Create Root CA
Trusted CA-1	---	---	View Delete
Trusted CA-2	---	---	View Delete
Trusted CA-3	---	---	View Delete

Note:

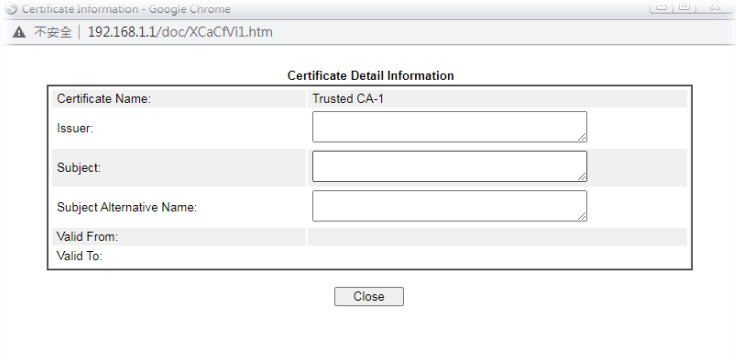

1. Please setup the "System Maintenance >> [Time and Date](#)" correctly before you try to generate a RootCA!!
2. The Time Zone MUST be setup correctly!!

IMPORT

REFRESH

Available settings are explained as follows:

Item	Description
Create Root CA	Click to create a new root CA.
Name	Name that identifies the certificate.
Subject	Shows the Subject Name of the certificate.
Status	Displays the status of the certificate.
Modify	Create - Click to fill out details about a certificate, and start the generation process. View - Click to view details of the certificate.

	 <p>Delete - Click to delete the certificate.</p>
Import	Click to import an existing certificate.
Refresh	Click to refresh the page to display the latest certificate information.

Creating a Root CA

Click **Create Root CA** to open the following page.

Certificate Management >> Root CA Certificate

Generate Root CA

Certificate Name	Root CA <input type="button" value="Fill the default value"/>
Subject Alternative Name	
Type	IP Address <input type="button" value="v"/>
IP	<input type="text"/>
Subject Name	
Country (C)	<input type="text"/>
State (ST)	<input type="text"/>
Location (L)	<input type="text"/>
Organization (O)	<input type="text"/>
Organization Unit (OU)	<input type="text"/>
Common Name (CN)	<input type="text"/>
Email (E)	<input type="text"/>
Key Type	RSA <input type="button" value="v"/>
Key Size	1024 Bit <input type="button" value="v"/>
Algorithm	SHA-256 <input type="button" value="v"/>

Available settings are explained as follows:

Item	Description
Certificate Name	Display the name of root CA. Fill the default value - Click to enter the default value for this Root CA.
Type	Select the type of Subject Alternative Name and enter its value.
Country (C)	Country in which your organization is located.
State (ST)	State or province where your organization is located.

Location (L)	City where you're your organization is located.
Organization (O)	Legal name of your organization.
Organization Unit (OU)	Department within your organization that you wish to be associated with this certificate.
Common Name (CN)	Fully-qualified domain name / WAN IP that will be used to reach your server.
Email (E)	Email address of the entry.
Key Type	Key type is hard set to RSA.
Key Size	Choose between 1024 and 2048 bit.
Algorithm	Choose between SHA-1 and SHA-256.
Generate	Click to submit generate request to the CA server.

Importing a Trusted CA

To import a pre-saved trusted CA certificate, please click **IMPORT** to open the following window.

Certificate Management >> Trusted CA Certificate

Import X509 Trusted CA Certificate

Select a trusted CA certificate file.

Click [Import](#) to upload the certification.

Available settings are explained as follows:

Item	Description
Browse	Click Browse to select a local certificate file.
Import	Click to import selected certificate file to router. The one you imported will be listed on the Trusted CA Certificate window.
Cancel	Click to return to the main Trusted CA Certificate screen.

IV-2-3 Certificate Backup

You can back up Local and Trusted CA certificates on the router to a file.

Certificate Management >> Certificate Backup

Certificate Backup / Restoration

Backup

Encrypt password:

Confirm password:

Click to download certificates to your local PC as a file.

Restoration

Select a backup file to restore.

未選擇任何檔案

Decrypt password:

Click to upload the file.

Available settings are explained as follows:

Item	Description
Backup	
Encrypt password/Confirm password	Enter the password with which you wish to encrypt the certificate.
Backup	Click to download the certificate.
Restoration	
Select a backup file to restore	Click Browse to select the backup file you wish to restore.
Decrypt password	Enter the password that was used to encrypt the certificates.
Restore	Click to retrieve the certificate.

IV-2-4 Self-Signed Certificate

A self-signed certificate is a *unique* identification for the device (e.g., Vigor router) which generates the certificate by itself to ensure the router security. Such self-signed certificate is signed with its own private key.

The self-signed certificate will be applied in SSL VPN, HTTPS, and so on. In addition, it can be created for free by using a wide variety of tools.

Certificate Management >> Self-Signed Certificate

Self-Signed Certificate Information

Certificate Name :	self-signed
Issuer :	C=TW, ST=HsinChu, L=HuKou, O=DrayTek Corp., OU=DrayTek Support, CN=Vigor Router

Note:

1. Please setup the **System Maintenance >> Time and Date** correctly before you try to regenerate a self-signed certificate!!
2. The Time Zone MUST be setup correctly!!

Regenerate

Click Regenerate to open the Regenerate Self-Signed Certificate window. Enter all requested information including certificate name (used to differentiate different certificates), subject alternative name type and relational settings for subject name. Then click GENERATE.

Part V Security

Firewall

CSM

While the broadband users demand more bandwidth for multimedia, interactive applications, or distance learning, security has been always the most concerned. The firewall of the Vigor router helps to protect your local network against attack from unauthorized outsiders. It also restricts users in the local network from accessing the Internet.

CSM is an abbreviation of Central Security Management which is used to control IM/P2P usage, filter the web content and URL content to reach a goal of security management.

V-1 Firewall

Basic

A network firewall monitors traffic travelling between networks, with the ability to selectively allow or block traffic using a predefined set of security rules. This helps to maintain the integrity of networks by stopping unauthorized access and the exchange of sensitive information.

Firewall Facilities

LAN users are provided with secured protection by the following firewall facilities:

- User-configurable IP filter (Data Filter).
- Stateful Packet Inspection (SPI): tracks packets and denies unsolicited incoming data
- Selectable Denial of Service (DoS) /Distributed DoS (DDoS) attacks protection

Data Filter

All traffic, both incoming and outgoing, that does not trigger a PPP connection attempt (either because a PPP connection is not necessary, or the required PPP connection has already been established) is checked against the Data Filter, and will be allowed or blocked according to the rules configured within.

Stateful Packet Inspection (SPI)

Stateful inspection is a firewall architecture that works at the network layer. Unlike legacy static packet filtering, which examines a packet based on the information in its header, stateful inspection builds up a state machine to track each connection traversing all interfaces of the firewall and makes sure they are valid. The stateful firewall of Vigor router not only examines the header information also monitors the state of the connection.

Denial of Service (DoS) Defense

DoS attacks are categorized into two types: flooding-type attacks and vulnerability attacks. Flooding-type attacks attempts to exhaust system resources while vulnerability attacks attempts to paralyze the system by exploiting vulnerabilities of protocols or operation systems.

Vigor's DoS Defense functionality detects DoS attacks and mitigates their damage by inspecting every incoming packet, and malicious packets will be blocked. If Syslog is enabled, alert messages will also be sent. Abnormal traffic flow such as flood and port scan attacks that exceed allowable thresholds are also blocked.

The below shows the attack types that DoS/DDoS defense function can detect:

1. SYN flood attack
2. UDP flood attack
3. ICMP flood attack
4. Port Scan attack
5. IP options
6. Land attack
7. Smurf attack
8. Trace route

9. SYN fragment
10. Fraggle attack
11. TCP flag scan
12. Tear drop attack
13. Ping of Death attack
14. ICMP fragment
15. Unassigned Numbers

Web User Interface

Below shows the menu items for Firewall.

V-1-1 General Setup

General Setup Page

Such page allows you to enable / disable Data Filter, determine general rule for filtering the incoming and outgoing data.

Firewall >> General Setup

General Setup

General Setup

Default Rule

Data Filter Enable Start Filter Set: Set#1 ▼

Disable

Allow pass inbound fragmented large packets (required for certain games and streaming)

Enable Strict Security Firewall

Block routing connections initiated from WAN IPv4 IPv6

Note:

Packets are filtered by firewall functions in the following order:

- 1.Data Filter Sets and Rules
- 2.Block routing connections initiated from WAN
- 3.Default Rule

Backup Firewall : <input type="button" value="Backup"/>	Restore Firewall: 選擇檔案 未選擇任何檔案	<input type="button" value="Restore"/>
--	--	--

Note:

This will not backup the detail setting of Quality of Service and Schedule.

Available settings are explained as follows:

Item	Description
Data Filter	Select Enable to activate the Data Filter function, and then choose a Start Filter Set.

Allow pass inbound fragmented large packets	<p>Certain games and video streaming service use fragmented UDP packets to transfer data. Enabling this option allows these applications to function properly.</p> <p>If this option is not enabled, the router will attempt to reassemble fragmented packets up to a certain value (e.g., 15xx-2102) kilobytes long. Packets larger than the certain value will be discarded.</p> <p>If this option is enabled, the router always passes fragmented packets without reassembling them, regardless of the size of the packet.</p>
Enable Strict Security Firewall	<p>If this option and the Web Content Filter (WCF) are both enabled, web traffic will be blocked if the WCF server fails to respond to lookup requests.</p>
Block routing connections initiated from WAN	<p>IPv6 - IPv6 does not make use of Network Address Translation (NAT), so all LAN hosts receive public IPv6 IP addresses that are exposed to the WAN. Enable this option to block WAN hosts from connecting to LAN hosts using IPv6.</p> <p>IPv4 - For LAN hosts receiving WAN IPv4 addresses using the IP routed subnet, enable this option to prevent WAN hosts from connecting to LAN hosts. This option has no effect on LAN hosts on private LAN subnets.</p>
Backup Firewall	<p>Click Backup to save the firewall configuration.</p>
Restore Firewall	<p>Click Select to choose a firewall configuration file. Then click Restore to apply the file.</p>

To save changes on the page, click **OK**. To discard changes, click **Cancel**.

Traffic is filtered by firewall functions in the following order:

1. Data Filter Sets and Rules
2. Block connections initiated from WAN
3. Default Rule

Default Rule Page

Such page allows you to choose filtering profiles including QoS, Load-Balance policy, WCF, APP Enforcement, URL Content Filter, for data transmission via Vigor router.

The default rule applies to all traffic that is not constrained by other filters or rules.

Firewall >> General Setup

Advance Setting Edit

OK
Cancel

Backup Firewall: Backup
Restore Firewall: 選擇檔案 未選擇任何檔案 Restore

Note:

This will not backup the detail setting of Quality of Service and Schedule.

Available settings are explained as follows:

Item	Description
Filter	Select Pass or Block for the packets that do not match with the filter rules. When the setting is Block , all other fields on the page are disabled because they are not applicable.
Sessions Control	The current number of sessions is shown before the slash, followed by the maximum number of concurrent sessions allowed, which is configurable. The default maximum is 60000, which is also the upper limit of the value.
Quality of Service	Choose one of the QoS rules to be applied as firewall rule. For detailed information of setting QoS, please refer to the related section later.
User Management	This setting is only available when Rule-Based is selected in User Management>>General Setup . The default firewall rule will be applied to the selected user or user group. Refer to the chapter on User Management for more details on the feature. <ul style="list-style-type: none"> ● None: User Management does not apply to the default rule.

	<ul style="list-style-type: none"> ● User Object: The default rule only applies to the selected user. ● [Create New User]: Select this to create a new user. ● User Group: The default rule only applies to the selected User Group. ● [Create New Group]: Select this to create a new user group. ● ALL: The default rule applies to all defined users. ● Create New User or Create New Group item will appear for you to click to create a new one if there is no user profile or group profile existed. <p>Syslog - Select to allow User Management to log messages in Syslog.</p>
APP Enforcement	<p>Select an APP Enforcement profile for application blocking, or None to disable APP Enforcement for the Default Rule. Select [Create New] from the dropdown list to create a new profile. Refer to the chapter on APP Enforcement for more details on the feature.</p> <p>Syslog - Select to allow APP Enforcement to log messages in Syslog.</p>
URL Content Filter	<p>Select a URL Content Filter profile to be used, or None to disable URL Content Filter for the Default Rule. Select [Create New] from the dropdown list to create a new profile. Refer to the chapter on URL Content Filter for more details on the feature.</p> <p>Syslog - Select to allow URL Content Filter to log messages in Syslog. Logging action is configured at the profile level in CSM>>URL Content Filter Profile, Log.</p>
Web Content Filter	<p>Select a Web Content Filter profile to be used, or None to disable Web Content Filter for the Default Rule. Select [Create New] from the dropdown list to create a new profile.</p> <p>Syslog - Select to allow Web Content Filter to log messages in Syslog. Logging action is configured at the profile level in the Web Content Filter Profile Table section in CSM>>Web Content Filter Profile, Log.</p>
DNS Filter	<p>Select the DNS Filter profile to be used, or None to disable DNS Filter for the Default Rule. Select [Create New] from the dropdown list to create a new profile.</p> <p>Syslog - Select to allow DNS Filter to log messages in Syslog. Logging action is configured at the profile level in the DNS Filter Profile Table section in CSM>>DNS Filter Profile, SysLog.</p>
Advance Setting	<p>Click Edit to open the configuration window for Advanced Settings. However, it is recommended to use the default settings.</p>

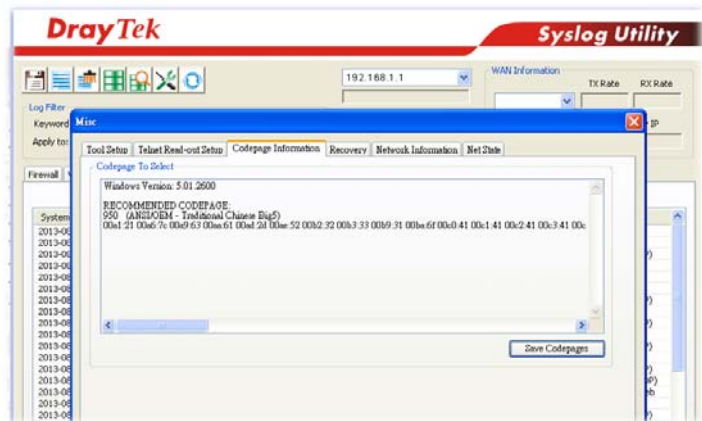

Firewall >> General Setup

Advance Setting	
Codepage	ANSI(1252)-Latin I
Window size:	65535
Session timeout:	60 Minute

OK Close

Codepage - Sets the codepage used by the URL content filter to match URLs against keywords in profiles. Choosing the appropriate codepage can increase the accuracy of the URL Content Filter. The default value is ANSI 1252 Latin I. If the setting is None, no decoding of URL will be performed.

If you are unsure of which codepage to use, please start the Syslog application, and the recommended codepage will be shown in the Codepage Information tab in the Setup dialog box.

Window size - Sets the TCP window size as described in RFC 1323. Valid values are from 0 to 65535. The more the value is, the better the performance will be. However, if the network is not stable, small value will be proper.

Session timeout - Sets the timeout sessions are allowed to idle before they are removed from the system.

Backup Firewall

Click Backup to save the firewall configuration.

Restore Firewall

Click Select to choose a firewall configuration file. Then click Restore to apply the file.

After finishing all the settings here, please click OK to save the configuration.

V-1-2 Filter Setup

Click Firewall and click Filter Setup to bring up the setup page.

Firewall >> Filter Setup

- Wizard Mode: most frequently used settings in three pages
 Advance Mode: all settings in one page

Available settings are explained as follows:

Item	Description
Filter Rule	To edit the filter rule, click the filter rule number to bring up the Edit Filter Rule page. See the following section for details on the Edit Filter Rule page.
Enable	Select to enable the filter rule.
Comments	Optional comment entered in the settings page to identify the rule.
Direction	Displays the direction of packet.
Src IP / Dst IP	Displays the IP address of source /destination.
Service Type	Displays the type and port number of the packet.

Action	Displays the packets to be passed /blocked.
CSM	Displays the content security managed
Move Up/Down	Use Up or Down link to change the order of the filter rules.
Next Filter Set	Select the filter set for the firewall to process after the current filter set, or None if the current filter set is the last one to be processed. Be careful not to create a loop when setting next filter sets.
Wizard Mode	Allow to configure frequently used settings for filter rule via several setting pages.
Advance Mode	Allow to configure detailed settings of filter rule.

To use Wizard Mode, simple do the following steps:

1. Click the **Wizard Mode** radio button.
2. Click **Index 1**. The setting page will appear as follows:

Firewall >> Edit Filter Set >> Edit Filter Rule Wizard

Filter Set 1 Rule 1

Firewall Rule applies to packets that meet the following criteria

Comments:

Direction:

Source IP:

Start IP Address:

End IP Address:

Subnet Mask:

Destination IP:

Start IP Address:

End IP Address:

Subnet Mask:

Protocol:

Source Port:

Destination Port:

Available settings are explained as follows:

Item	Description
Comments	Enter filter set comments/description. Maximum length is 14- character long.
Direction	Set the direction of packet flow. Note: RT means routing domain for 2nd subnet or other LAN.
Source/Destination IP	To set the IP address manually, please choose Any Address/Single Address/Range Address/Subnet Address as the Address Type and Enter them in this dialog.
Protocol	Specify the protocol(s) which this filter rule will apply to.

Source Port / Destination Port	<p>(=) - when the first and last value are the same, it indicates one port; when the first and last values are different, it indicates a range for the port and available for this service type.</p> <p>(!=) - when the first and last value are the same, it indicates all the ports except the port defined here; when the first and last values are different, it indicates that all the ports except the range defined here are available for this service type.</p> <p>(>) - the port number greater than this value is available.</p> <p>(<) - the port number less than this value is available for this profile.</p>
---------------------------------------	--

- Click **Next** to get the following page.

Firewall >> Edit Filter Set >> Edit Filter Rule Wizard

Filter Set 1 Rule 1

Based on the settings in the previous pages, we guess you want to have: **Pass**

The current setting is :

Pass Immediately

APP Enforcement:

URL Content Filter:

Web Content Filter:

DNS Filter:

Block Immediately

Available settings are explained as follows:

Item	Description
Pass Immediately	<p>Packets matching the rule will be passed immediately.</p> <p>APP Enforcement - Select an APP Enforcement profile for application blocking, or None to disable APP Enforcement for the Default Rule. Select [Create New] from the dropdown list to create a new profile. Refer to the chapter on APP Enforcement for more details on the feature.</p> <p>URL Content Filter - Select a URL Content Filter profile to be used, or None to disable URL Content Filter for the Default Rule. Select [Create New] from the dropdown list to create a new profile. Refer to the chapter on URL Content Filter for more details on the feature.</p> <p>Web Content Filter - Select a Web Content Filter profile to be used, or None to disable Web Content Filter for the Default Rule. Select [Create New] from the dropdown list to create a new profile.</p> <p>DNS Filter - Select the DNS Filter profile to be used, or None to disable DNS Filter for the Default Rule. Select [Create New] from the dropdown list to create a new profile.</p>
Block Immediately	Packets matching the rule will be dropped immediately.

- After choosing the mechanism, click **Next** to get the summary page for reference.

Filter Set 1 Rule 1 Configuration Summary

Comments :	xNetBios -> DNS
Direction	
LAN/DMZ/RT/VPN -> WAN	
Criteria	
Source IP	Any
Destination IP	Any
Protocol	TCP/UDP, Port: from 137 ~ 139 to 53
More options	
Pass Immediately	
APP Enforcement :	None
URL Content Filter :	None
Web Content Filter :	None
DNS Filter :	None

5. If there is no error, click **Finish** to complete wizard setting.

To use **Advance Mode**, do the following steps:

1. Click the **Advance Mode** radio button.
2. Click **Index 1** to access into the following page.

Firewall >> Edit Filter Set >> Edit Filter Rule

Filter Set 1 Rule 1

Enable

Comments: xNetBios -> DNS

Schedule Profile: None, None, None, None

Clear sessions when schedule is ON

Direction: LAN/RT/VPN -> WAN **Advanced**

Source IP/Country: Any **Edit**

Destination IP/Country: Any **Edit**

Service Type: TCP/UDP, Port:from 137~139 to53 **Edit**

Fragments: Don't Care

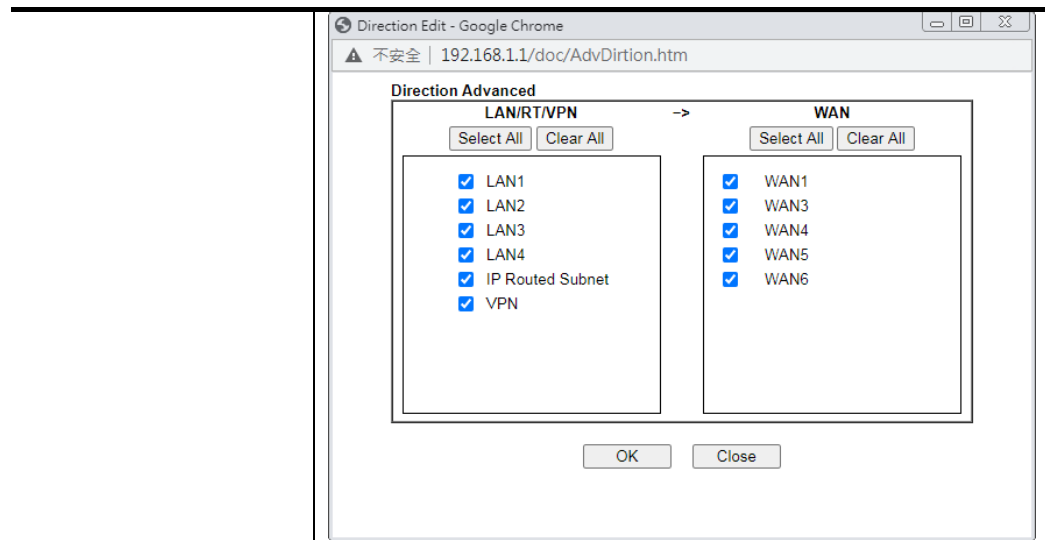

Application	Action/Profile	Syslog
Filter	Block Immediately	<input type="checkbox"/>
Branch to Other Filter Set	None	<input type="checkbox"/>
Sessions Control	0 / 50000	<input type="checkbox"/>

Quality of Service	None	<input type="checkbox"/>
User Management	None	<input type="checkbox"/>
APP Enforcement	None	<input type="checkbox"/>
URL Content Filter	None	<input type="checkbox"/>
Web Content Filter	None	<input type="checkbox"/>
DNS Filter	None	<input type="checkbox"/>

Advance Setting **Edit**

OK **Clear** **Cancel**

Available settings are explained as follows:

Item	Description
Enable	Check this box to enable the filter rule.
Comments	Enter filter set comments/description. Maximum length is 14- character long.
Schedule Profile	Select Schedule indexes to allow the rule to be enabled at specific times. You may choose up to 4 out of the 15 schedules in Applications >> Schedule. The rule is always enabled when no indexes have been selected.
Clear sessions when schedule ON	Select this option to clear existing sessions when the rule is changes is enabled by a schedule profile. All connections will be reset.
Direction	Specify the direction of traffic flow to which this filter rule applies. Note: RT stands for the routing domain for 2nd subnet or other LAN. Advanced - After choosing the direction, click the Advanced button to specify interfaces for traffic flow.

Source IP/ Country
and
Destination IP /
Country

Click Edit to bring up the following dialog box to configure the source and destination IP addresses or country objects.

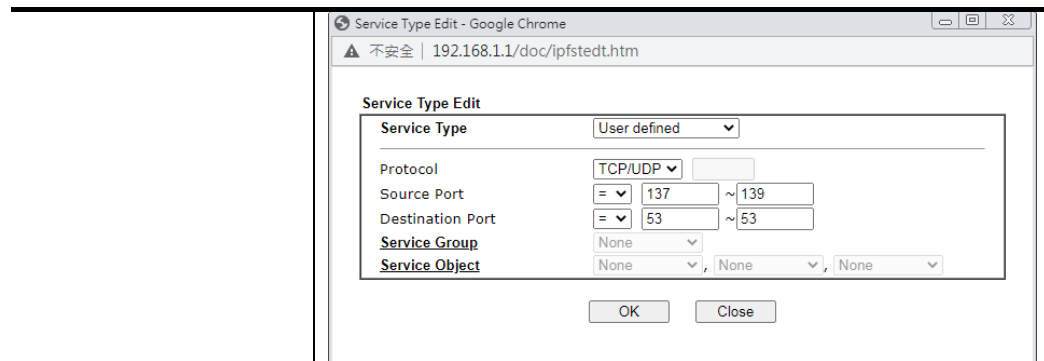

To set the IP address manually, please choose an Address Type and enter required information.

Address Type - Select from one of the following:

- Any Address - All IP addresses
- Single Address - Enter one IP address in Start IP address
- Range Address - Enter the Start and End IP Addresses
- Subnet Address - Enter the Start IP Address and the Subnet Mask. Example: Start IP Address 192.168.1.1 and Subnet Mask 255.255.255.128 means is the same as having the Start IP Address as 192.168.1.1 and the End IP Address as 192.168.1.127.
- Group and Objects - Allows selection of predefined IP Groups and IP Objects. For details on IP Groups and Objects, see the chapter on Objects Setting.
- Country Object - Allows selection of predefined country objects.

Service Type

Click Edit to bring up the following dialog box to configure the Service Type.

Service Type - To set the service type manually, please choose **User defined** as the Service Type.

- **User defined** - Configure the protocol, source and destination ports manually.
- **Group and Objects** - Select preconfigured Service Groups or Objects.

Protocol - Specify the protocol(s) which this filter rule will apply to.

Source/Destination Port -

- (=) - any port that falls within the specified range
- (!=) - any port that falls outside of the specified range
- (>) - a port whose number is greater than the specified value
- (<) - a port whose number is smaller than the specified value

Service Group/Object - Use the drop down list to select the desired Service Groups or Objects.

<p>Fragments</p>	<p>Action to be taken for fragmented packets. This option is valid for Data Filter rules only.</p> <ul style="list-style-type: none"> ● Don't care -No action will be taken towards fragmented packets. ● Unfragmented -Apply the rule to unfragmented packets. ● Fragmented - Apply the rule to fragmented packets. ● Too Short - Apply the rule only to packets that are too short to contain a complete header.
<p>Filter</p>	<p>Action to be taken when packets match the rule.</p> <p>Block Immediately - Packets matching the rule will be dropped immediately.</p> <p>Pass Immediately - Packets matching the rule will be passed immediately.</p> <p>Block If No Further Match - Block the packet if this the last matching rule for this packet in the filter.</p> <p>Pass If No Further Match - Pass the packet if this is the last matching rule for this packet in the filter.</p>
<p>Branch to other Filter Set</p>	<p>If the packet matches the filter rule, and the Filter action is Block If No Further Match or Pass If No Further Match, you can specify the next filter set to be applied, thus skipping the rest of the rules in the current filter set.</p>
<p>Sessions Control</p>	<p>The current number of sessions is shown before the slash, followed by the maximum number of concurrent sessions allowed, which is configurable. The default maximum is</p>

	60000, which is also the upper limit of the value.
MAC Bind IP	<p>Strict - Ensure that both the MAC address and the IP address of the source and/or destination clients.</p> <p>Non-Strict - Do not check the IP address when processing IP Objects that specify MAC addresses.</p>
Quality of Service	Choose one of the QoS rules to be applied as firewall rule. For detailed information of setting QoS, please refer to the related section later.
User Management	<p>This setting is only available when Rule-Based is selected in User Management>>General Setup. The default firewall rule will be applied to the selected user or user group. Refer to the chapter on User Management for more details on the feature.</p> <ul style="list-style-type: none"> ● None: User Management does not apply to the default rule. ● User Object: The default rule only applies to the selected user. ● [Create New User]: Select this to create a new user. ● User Group: The default rule only applies to the selected User Group. ● [Create New Group]: Select this to create a new user group. ● ALL: The default rule applies to all defined users. ● Create New User or Create New Group item will appear for you to click to create a new one if there is no user profile or group profile existed. <p>Syslog - Select to allow User Management to log messages in Syslog.</p>
APP Enforcement	<p>Select an APP Enforcement profile for application blocking, or None to disable APP Enforcement for the Default Rule. Select [Create New] from the dropdown list to create a new profile. Refer to the chapter on APP Enforcement for more details on the feature.</p> <p>Syslog - Select to allow APP Enforcement to log messages in Syslog.</p>
URL Content Filter	<p>Select a URL Content Filter profile to be used, or None to disable URL Content Filter for the Default Rule. Select [Create New] from the dropdown list to create a new profile. Refer to the chapter on URL Content Filter for more details on the feature.</p> <p>Syslog - Select to allow URL Content Filter to log messages in Syslog. Logging action is configured at the profile level in CSM>>URL Content Filter Profile, Log.</p>
Web Content Filter	<p>Select a Web Content Filter profile to be used, or None to disable Web Content Filter for the Default Rule. Select [Create New] from the dropdown list to create a new profile.</p> <p>Syslog - Select to allow Web Content Filter to log messages in Syslog. Logging action is configured at the profile level in the Web Content Filter Profile Table section in CSM>>Web Content Filter Profile, Log.</p>
DNS Filter	Select the DNS Filter profile to be used, or None to disable DNS Filter for the Default Rule. Select [Create New] from

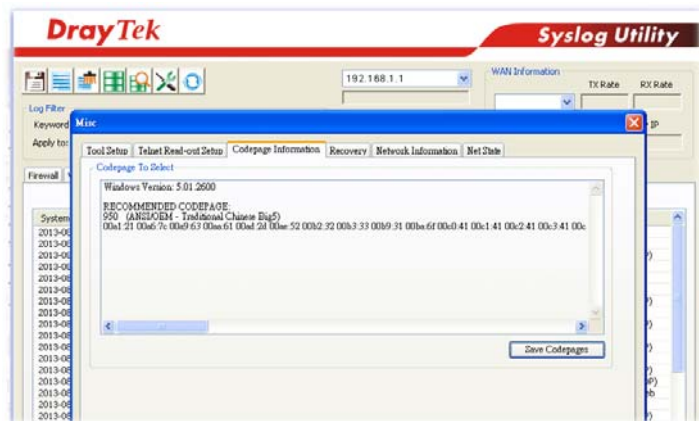

the dropdown list to create a new profile.
Syslog - Select to allow DNS Filter to log messages in Syslog. Logging action is configured at the profile level in the DNS Filter Profile Table section in CSM>>DNS Filter Profile, SysLog.

Advance Setting Click **Edit** to open the configuration window for Advanced Settings. However, it is recommended to use the default settings.

Codepage - Sets the codepage used by the URL content filter to match URLs against keywords in profiles. Choosing the appropriate codepage can increase the accuracy of the URL Content Filter. The default value is ANSI 1252 Latin I. If the setting is None, no decoding of URL will be performed.

If you are unsure of which codepage to use, please start the Syslog application, and the recommended codepage will be shown in the Codepage Information tab in the Setup dialog box.

Window size - Sets the TCP window size as described in RFC 1323. Valid values are from 0 to 65535. The more the value is, the better the performance will be. However, if the network is not stable, small value will be proper.

Session timeout - Sets the timeout sessions are allowed to idle before they are removed from the system.

DrayTek Banner - Select to display the following screen for web pages that are blocked by the Firewall. The default setting is Enabled.

The requested Web page has been blocked by Web Content Filter.

Please contact your system administrator for further information.

[Powered by Draytek]

Strict Security Checking

APP Enforcement - If this option is selected, when the router cannot identify the application that generated the outbound traffic due to limited system resources, the session will be blocked; if this option is not selected, the session will be allowed.

3. When you finish the configuration, please click **OK** to save and exit this page.

V-1-3 Defense Setup

As a sub-functionality of IP Filter/Firewall, there are 15 types of detect/ defense function in the DoS Defense setup. The DoS Defense functionality is disabled for default.

V-1-3-1 DoS Defense

To configure DoS Defense, select DoS Defense under the Firewall menu item on the Web UI menu bar.

Firewall >> Defense Setup

DoS Defense Spoofing Defense

DoS defense

<input type="checkbox"/> Enable DoS Defense	Select All	White/Black List Option	Log: Enable ▾

<input type="checkbox"/> Block trace route	<input type="checkbox"/> Block ICMP fragment		
<input type="checkbox"/> Block SYN fragment	<input type="checkbox"/> Block Unassigned Numbers		
<input type="checkbox"/> Block Fraggle Attack			

OK Clear All Cancel

Available settings are explained as follows:

Item	Description
Enable Dos Defense	Select to enable DoS Defense. Select All - Click to select all DoS Defense options. White/Black List Option - Set white/black list of IPv4/IPv6 address.
Enable SYN flood defense	Select to enable SYN flood defense. When the arrival rate of SYN packets exceeds the Threshold value, the router will start to randomly discard TCP SYN packets for a period of time as defined in Timeout. This is to prevent TCP SYN packets from exhausting router resources. The default values of threshold and timeout are 2000 packets per second and 10 seconds, respectively.
Enable UDP flood defense	Select to enable UDP flood defense. When the arrival rate of UDP packets exceeds the Threshold value, the router will start to randomly discard TCP SYN packets for a period of time as defined in Timeout. The default values of threshold and timeout are 2000

	packets per second and 10 seconds, respectively.
Enable ICMP flood defense	<p>Select to enable ICMP flood defense. When the arrival rate of ICMP packets exceeds the Threshold value, the router will start to randomly discard TCP SYN packets for a period of time as defined in Timeout.</p> <p>The default values of threshold and timeout are 250 packets per second and 10 seconds, respectively.</p>
Enable Port Scan detection	<p>Select to enable Port Scan detection. Port Scans attack your network by sending packets to a range of ports in an attempt to find services that would respond. When Port Scan detection is enabled, the router sends warning messages when it detects port scanning activities that exceed the Threshold rate.</p> <p>The default threshold is 2000 packets per second.</p>
Block IP options	<p>Select to enable Block IP options. The Vigor router will ignore IP packets with IP option field set in the datagram header. IP options are rarely used and could be abused by attackers as they carry information about the private network otherwise not available to the external network, such as security, TCC (closed user group) parameters, a series of Internet addresses, routing messages, etc, which external eavesdroppers can use to discover details about the private network.</p>
Block Land	<p>Select to Block LAND attacks. LAND attacks happen when an attacker sends spoofed SYN packets with both source and destination addresses set to that of the target system, which causes the target to reply to itself continuously.</p>
Block Smurf	<p>Select to Block Smurf attacks. The router will ignore any broadcasting ICMP echo request.</p>
Block trace route	<p>Select to Block traceroutes. The router will not forward traceroute packets.</p>
Block SYN fragment	<p>Select to Block SYN packet fragments. The router will drop any packets having both the SYN and more-fragments bits set.</p>
Block Fraggle Attack	<p>Select to Block Fraggle Attacks. Broadcast UDP packets received from the Internet are blocked.</p> <p>Activating this feature might block some legitimate packets. Since all broadcast UDP packets coming from the Internet are blocked, RIP packets from the Internet could also be dropped.</p>
Block TCP flag scan	<p>Select to Block TCP Flag Scans. TCP packets with abnormal flag settings will be dropped. TCP flag scanning activities that are blocked include no flag scan, FIN without ACK scan, SYN FIN scan, Xmas scan and full Xmas scan.</p>
Block Tear Drop	<p>Select to Block Tear Drop attacks. Some clients may crash when they receive ICMP datagrams (packets) that exceed the maximum length. The router discards any fragmented ICMP packets having lengths greater than 1024 octets.</p>
Block Ping of Death	<p>Select to Block Ping of Death, where fragmented ping packets are sent to target hosts so that those hosts could crash as they reassemble the malformed ping packets.</p>
Block ICMP Fragment	<p>Select to Block ICMP Fragments. ICMP packets with the more-fragments bit set are dropped.</p>

Block Unassigned Numbers

Select to Block Unassigned Protocol Numbers, and the router will block packets having unassigned protocol numbers. Individual IP packet has a protocol field in the datagram header to indicate the protocol type running over the upper layer. However, the protocol types greater than 100 are reserved and undefined at this time. Therefore, the router should have ability to detect and reject this kind of packets.

Warning Messages

We provide Syslog function for user to retrieve message from Vigor router. The user, as a Syslog Server, shall receive the report sending from Vigor router which is a Syslog Client.

All the warning messages related to DoS Defense will be sent to user and user can review it through Syslog daemon. Look for the keyword DoS in the message, followed by a name to indicate what kind of attacks is detected.

System Maintenance >> SysLog / Mail Alert Setup

SysLog / Mail Alert Setup

Note:

1. USB Syslog space is available from 256-1024 MB or 1-16 GB.
2. Mail Syslog cannot be activated unless USB Disk is ticked for "Syslog Save to".
3. Mail Syslog feature will send the Syslog when it is full.

After finishing all the settings here, please click OK to save the configuration.

V-1-3-2 Spoofing Defense

Click the Spoofing Defense tab to open the setup page.

Firewall >> Defense Setup

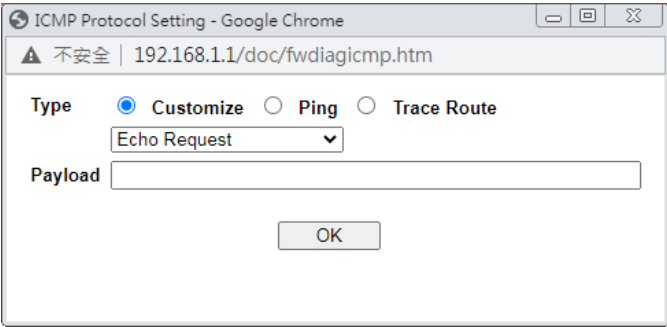

DoS Defense	Spoofing Defense
-------------	------------------

ARP Spoofing Defense Log:

- Block ARP replies with inconsistent source MAC addresses.
- Block ARP replies with inconsistent destination MAC addresses.
- Decline VRRP MAC into ARP table.

IP Spoofing Defense

- Block IP packet from WAN with inconsistent source IP addresses.
- Block IP packet from LAN with inconsistent source IP addresses.

Dst Port	Enter the port number of the packet's destination.
Packet & Payload	<p>In firewall diagnose, two packets belong to one connection. In general, two packets are enough for Vigor router to perform this test.</p> <p>Enable - Check the box to send out the test packet.</p> <p>Direction - The first packet of the firewall test will follow the direction specified above. However, the direction for the second packet might be different. Simply choose the direction (from Computer A to B or from the B to A) for the second packet.</p> <p>Protocol - It displays the mode selected above and the state. If required, click the mode link to configure advanced setting. The common service type (Customize, Ping, Trace Route / Customize, DNS, Trace Route / Customize, Http(GET) related to that mode (ICMP / UDP / TCP) will be shown on the following dialog box.</p>  <ul style="list-style-type: none"> ● Type - Choose Customize, Ping, Trace Route / Customize, DNS, Trace Route / Customize, Http (GET). ● Payload - It is available when Customize is selected. Simply type 16 HEX characters which represent certain packet (e.g., DNS packet) if you want to set the data transferred with protocol (ICMP/UDP/TCP) which is different to Type setting.
Analyze	Execute the test and analyze the result.

The following figure shows the test result after clicking **Analyze**. Processing state for the functions (MAC Filter, QoS, User management, etc.) related to the firewall will be displayed by green or red LED.

Application Notes

A-1 How to Configure Certain Computers Accessing to Internet

We can specify certain computers (e.g., 192.168.1.10 ~ 192.168.1.20) accessing to Internet through Vigor router. Others (e.g., 192.168.1.31 and 192.168.1.32) outside the range can get the source from LAN only.

The way we can use is to set two rules under Firewall. For Rule 1 of Set 2 under Firewall>>Filter Setup is used as the default setting, we have to create a new rule starting from Filter Rule 2 of Set 2.

1. Access into the web user interface of Vigor router.
2. Open Firewall>>Filter Setup. Click the Set 2 link, choose Advance Mode and choose the Filter Rule 2 button.

Firewall >> Filter Setup

Filter Setup

[Set to Factory Default](#)

Set	Comments	Set	Comments
<u>1.</u>	Default Data Filter	<u>7.</u>	
<u>2.</u>		<u>8.</u>	
<u>3.</u>		<u>9.</u>	
<u>4.</u>		<u>10.</u>	
<u>5.</u>		<u>11.</u>	
<u>6.</u>		<u>12.</u>	

Firewall >> Filter Setup >> Edit Filter Set

Filter Set 1

Comments:

Rule	Enable	Comments	Direction	Src IP	Dst IP	Service Type	Action	CSM	Move Up	Move Down
1	<input checked="" type="checkbox"/>	xNetBios -> DNS	LAN/DMZ/RT/VPN -> WAN	Any	Any	TCP/UDP, Port: from 137~139 to 53	Block Immediately			Down
2	<input type="checkbox"/>		LAN/DMZ/RT/VPN -> WAN	Any	Any	Any	Pass Immediately		UP	Down
3	<input type="checkbox"/>		LAN/DMZ/RT/VPN -> WAN	Any	Any	Any	Pass Immediately		UP	Down

3. Check the box of **Enable**. Enter the comments (e.g., **block_all**). Choose **Block If No Further Match** for the **Filter** setting. Then, click **OK**.

Firewall >> Edit Filter Set >> Edit Filter Rule

Filter Set 1 Rule 2

Enable

Comments:

Schedule Profile: None, None, None, None
 Clear sessions when schedule is ON

Direction: LAN/DMZ/RT/VPN -> WAN

Source IP/Country:

Destination IP/Country:

Service Type:

Fragments:

Application Filter:

Branch to Other Filter Set:

Sessions Control:

MAC Bind IP:

Syslog:

Info

In default, the router will check the packets starting with Set 2, Filter Rule 2 to Filter Rule 7. If Block If No Further Match for is selected for Filter, the firewall of the router would check the packets with the rules starting from Rule 3 to Rule 7. The packets not matching with the rules will be processed according to Rule 2.

4. Next, set another rule. Just open **Firewall>>Filter Setup**. Click the **Set 2** link and choose the **Filter Rule 3** button.
5. Check the box of **Check to enable the Filter Rule**. Enter the comments (e.g., **open_ip**). Click the **Edit** button for **Source IP**.

Firewall >> Edit Filter Set >> Edit Filter Rule

Filter Set 1 Rule 3

Enable

Comments:

Schedule Profile: None, None, None, None
 Clear sessions when schedule is ON

Direction: LAN/DMZ/RT/VPN -> WAN

Source IP/Country:

Destination IP/Country:

Service Type:

Fragments:

- A dialog box will be popped up. Choose **Range Address** as **Address Type** by using the drop down list. Type 192.168.1.10 in the field of **Start IP**, and type 192.168.1.20 in the field of **End IP**. Then, click **OK** to save the settings. The computers within the range can access into the Internet.

IP Address Edit

Address Type	Range Address
Start IP Address	192.168.1.10
End IP Address	192.168.1.20
Subnet Mask	255.255.255.254 / 31
Invert Selection	<input type="checkbox"/>
IP Group	None, None
IP Object	None, None
IPv6 Group	None
IPv6 Object	None, None, None
Country Object	None

OK Close

- Now, check the content of **Source IP** is correct or not. The action for **Filter** shall be set with **Pass Immediately**. Then, click **OK** to save the settings.

Firewall >> Edit Filter Set >> Edit Filter Rule

Filter Set 1 Rule 3

<input checked="" type="checkbox"/> Enable	Comments: open_ip
Schedule Profile	None, None, None, None
<input type="checkbox"/> Clear sessions when schedule is ON	
Direction	LAN/DMZ/RT/VPN -> WAN
Source IP/Country	192.168.1.10~192.168.1.20
Destination IP/Country	Any
Service Type	Any
Fragments	Don't Care
Application	Action/Profile
Filter	Pass Immediately
Branch to Other Filter Set	None

- Both filter rules have been created. Click **OK**.

Firewall >> Filter Setup >> Edit Filter Set

Filter Set 1
Comments: Default Data Filter

Rule	Enable	Comments	Direction	Src IP	Dst IP	Service Type	Action
1	<input checked="" type="checkbox"/>	xNetBios -> DNS	LAN/DMZ/RT/VPN -> WAN	Any	Any	TCP/UDP, Port: from 137~139 to 53	Block
2	<input checked="" type="checkbox"/>	block_all	LAN/DMZ/RT/VPN -> WAN	Any	Any	Any	Block
3	<input checked="" type="checkbox"/>	open_ip	LAN/DMZ/RT/VPN -> WAN	192.168.1.10 ~ 192.168.1.20	Any	Any	Pass
4	<input type="checkbox"/>		LAN/DMZ/RT/VPN -> WAN	Any	Any	Any	Pass

Now, all the settings are configured well. Only the computers with the IP addresses within 192.168.1.10 ~ 192.168.1.20 can access to Internet.

V-2 Central Security Management (CSM)

Content Security Management (CSM) allows the network administrator to restrict Internet traffic based on the content type, thus ensuring appropriate use of network resources and also reducing the likelihood of threats from malicious network content.

APP Enforcement Filter

The APP Enforcement Filter can be used to prevent users from using undesirable or inappropriate network applications such as online chat and peer-to-peer programs. The filter works by detecting and blocking network traffic of applications by means of traffic patterns.

URL Content Filter

The URL Content Filter scans URL strings in HTTP requests for predefined keywords to restrict browsing activities.

Web Content Filter

Users can also be prevented from browsing certain types of websites by using the Web Content Filter. This filter classifies website domain names into different categories, which can be selectively blocked.

Filter profiles must first be created before these CSM Filters can be enabled. Once profiles have been configured, they can be applied to the Default Rule under Firewall>>General Setup, or Filter Rules in Filter Sets under Firewall>>Filter Setup.

Info

The priority of URL Content Filter is higher than Web Content Filter.

Enable URL Access Control Prevent web access from IP address

Action: Group/Object Selections:

Exception List

Web Feature

Enable Web Feature Restriction

Action: **File Extension Profile:** Cookie Proxy Upload

Available settings are explained as follows:

Item	Description
Profile Name	Name that identifies the URL Content Filter profile. The maximum length of the Profile Name is 15 characters.
Priority	<p>The order of evaluation of URL Access Control and Web Feature below:</p> <p>Both: Pass - Router will allow access only to web resources that match conditions specified in both URL Access Control and Web Feature. The Action setting of both URL Access Control and Web Feature will be disabled and the values set to Pass.</p> <p>Both:Block - Router will block access to web resources that match conditions specified in both URL Access Control and Web Feature. The Action setting of both URL Access Control and Web Feature will be disabled and the values set to Block.</p> <p>Either: URL Access Control First - Router will block or allow access to web resources that match conditions specified in either URL Access Control or Web Feature. URL Access Control is applied first, followed by Web Feature.</p> <p>Either: Web Feature First - Router will block or allow access to web resources that match conditions specified in either URL Access Control or Web Feature. Web Feature is applied first, followed by URL Access Control.</p>
Log	<p>None - No log file will be created for this profile.</p> <p>Pass - Only passed access attempts will be recorded in Syslog.</p> <p>Block - Only blocked access attempts will be recorded in Syslog.</p> <p>All - Both passed and blocked access attempts will be recorded in Syslog.</p>
URL Access Control	<p>Enable URL Access Control - Select to activate URL Access Control.</p> <p>Prevent web access from IP address - URLs containing IP addresses (e.g., 192.168.1.1) will be blocked. Only URLs with</p>

domain addresses (e.g., www.draytek.com) will be allowed. This is to prevent users from circumventing URL Access Control.

Action - This setting is enabled only when Priority is set to Either: URL Access Control First or Either: Web Feature First.

- **Pass** - Allows access to web pages with URLs containing keywords that are in the selected keyword groups or objects. Access to other URLs is blocked.
- **Block** - Blocks access to web pages with URLs containing keywords that are in the selected keyword groups or objects. Access to other URLs is allowed.

Exception List - Specify the object profile(s) as the exception list which will be processed in an opposite manner to the action selected above.

Group/Object Selections - Shows the Keyword Groups and/or Objects selected for this URL Content Filter Profile.

To add or remove Keyword Groups and Objects to the selection, click the **Edit** button to bring up the following screen.

Object/Group Edit

Keyword Object	None ▾
or Keyword Object	None ▾
or Keyword Object	None ▾
or Keyword Object	None ▾
or Keyword Object	None ▾
or Keyword Object	None ▾
or Keyword Object	None ▾

or Keyword Group	None ▾
or Keyword Group	None ▾
or Keyword Group	None ▾
or Keyword Group	None ▾
or Keyword Group	None ▾
or Keyword Group	None ▾

OK Close

Up to 8 Keyword Objects and 8 Keyword Groups can be selected. To add, remove or modify Groups or Objects, click the [Keyword Object](#) or [Keyword Group](#) hyperlinks to bring up the [Objects Setting >> Keyword Object](#) or [Objects Setting >> Keyword Group](#) pages.

Web Feature

Enable Restrict Web Feature - Check to enable the web feature restriction.

Action - This setting is enabled only when Priority is set to Either: URL Access Control First or Either: Web Feature First.

- **Pass** - Allows access to web pages with URLs containing keywords that are in the selected keyword groups or objects. Access to other URLs is blocked.
- **Block** - Blocks access to web pages with URLs containing keywords that are in the selected keyword groups or objects. Access to other URLs is allowed.

File Extension Profile - Choose one of the profiles that you configured in [Object Setting>> File Extension Objects](#)

	previously for passing or blocking the file downloading. Cookie - Select to block cookies from Internet websites. Proxy - Select to block web proxy servers that relay HTTP traffic. Upload - Select to block HTTP uploads from the LAN to the Internet.

To save changes on the page, click **OK**. To discard changes, click **Cancel**. To clear all settings, click **Clear**.

V-2-4 Web Content Filter Profile

Trial WCF service can be activated using the **Service Activation Wizard**.

If you wish to continue using WCF beyond the trial period, you can obtain a full WCF subscription by contacting your local DrayTek channel partner or dealer. WCF subscriptions can be activated using the **Activate** link on **CSM >> Web Content Filter Profile** (described in this section) or **System Maintenance**.

From the main menu, click **CSM**, followed by **Web Content Filter Profile** to load the profile configuration page.

Info 1

Web Content Filter (WCF) is not a built-in service of Vigor router but a service powered by Commtouch. If you want to use such service (trial or formal edition), you have to perform the procedure of activation first. For the service of formal edition, please contact with your dealer/distributor for detailed information.

Info 2

Commtouch is merged by Cyren, and GlobalView services will be continued to deliver powerful cloud-based information security solutions! Refer to: <http://www.prnewswire.com/news-releases/commtouch-is-now-cyren-239025151.html>

[Default Message](#)

```
<body><center><br><br><br><p>The requested Web page <br> from %SIP% <br>to %URL% <br>that is categorized with %CL% <br>has been blocked by %RNAME% Web Content Filter.<p>Please contact your system administrator for further information.</center></body>
```

Legend:

%SIP% - Source IP , %DIP% - Destination IP , %URL% - URL
%CL% - Category , %RNAME% - Router Name

OK

Available settings are explained as follows:

Item	Description
Activate	Click to visit the MyVigor website to activate WCF service. You will need to log in to your MyVigor account to proceed with the activation process. If you do not already have a MyVigor account, you can create one at this time.
Setup Query Server	Specify a WCF query server by typing address of the server. Click the Find more for a list of query servers. When the default value auto-selected is used, the server is determined automatically by looking up the geolocation of the WAN IP address. It is recommended that the default setting auto-selected be used.
Setup Test Server	Specify a WCF test server by typing address of the server. Click the Find more for a list of test servers. When the default value auto-selected is used, the server is determined automatically by looking up the geolocation of the WAN IP address. It is recommended that the default setting auto-selected be used.
Cache	None - The router verifies every HTTP URL requested by communicating with the WCF server on the Internet. This mode provides the most precise URL matching but has the lowest performance. L1 - The router caches the HTTP URLs that have been checked against the WCF server. URLs will be looked up in the L1 cache before reaching out to the WCF server. When the cache is full, the oldest entry will be deleted to accommodate new URLs. L2 - After a URL has been checked and found to pass WCF, the source and destination IPs are cached for about 1 second in the L2 cache. This is to allow a webpage to be loaded without further verifying the same URLs against the L1 cache or the WCF server. L1+L2 Cache - The router will utilize both L1 and L2 caches.
Set to Factory Default	Clear all profile settings.
Profile	Index number of the profile.
Name	Name that identifies the profile.
Administration Message	The message to be displayed in the browser when access to a website has been blocked. A custom message can be entered with HTML formatting in the text box. You can embed the following variables in the message: %SIP% - The source IP address that attempted the HTTP access. %DIP% - The destination IP address to which access was attempted. %URL% - The URL of the destination website. %CL% - The category to which the URL belongs. %RNAME% - The name of the router. Default Message - Click to reset the administration message to the factory default.

Up to 8 WCF profiles can be set up. To configure a profile, click its profile number to bring up its configuration page. Filter profile settings are specific to WCF providers. If you already

have an active WCF subscription, activating a WCF subscription to a provider that is different from your current provider will clear all existing profile configuration.

Clear All - Click to deselect all categories within the group.

To save changes on the page, click OK. To discard changes, click Cancel.

V-2-5 DNS Filter Profile

DNS Filter blocks or allows traffic to the WAN by intercepting DNS queries, and applying UCF and WCF rules to hostnames. DNS filtering is especially useful when you wish to restrict access of protocols other than HTTP, such as HTTPS. Note that a WCF license must have already been activated before WCF rules could be used.

To configure DNS Filter Profiles, select CSM >> Web Content Filter Profile from the main menu.

CSM >> DNS Filter

Available settings are explained as follows:

Item	Description
DNS Filter Profile Table	<p>DNS Filter Profiles take effect when DNS servers on the WAN are used for DNS queries. The router intercepts all outgoing DNS queries on UDP port 53 and applies WCF and UCF rules on the domain names before passing the queries to the DNS servers. IP addresses of the domains are then blocked or allowed as per applicable WCF and UCF rules.</p> <p>DNS Filter Profiles can be applied by selecting from Firewall filter rules.</p> <p>Profile - Index number of the profile. Click to bring up the configuration page for the profile entry.</p> <p>Name - Name that identifies the profile.</p>
Set to Factory Default	Clear all DNS Filter profile settings.
DNS Filter Local Setting	<p>By setting the IP address of the DNS lookup server to the router's address, the router serves as a DNS lookup proxy server. When DNS Filter Local Setting is enabled, all DNS queries sent to the router will have WCF and UCF rules applied to the hostnames, and access to the resolved IP addresses will be allowed or blocked as configured in the rules.</p> <p>DNS Filter - Select to enable DNS Filter Local Setting.</p> <p>Web Content Filter - Select a WCF profile.</p> <p>URL Content Filter - Select a UCF profile.</p> <p>Syslog - The filtering result can be recorded according to the setting selected for Syslog.</p> <ul style="list-style-type: none"> ● None - No log file will be created for this profile. ● Pass - Only passed access attempts will be recorded in Syslog. ● Block - Only blocked access attempts will be recorded in Syslog. ● Both - Both passed and blocked access attempts will be recorded in Syslog. <p>Black/White List - Specify IP address, subnet mask, IP object, or IP group as a black list or white list for DNS packets passing through or blocked by Vigor router.</p>
Administration Message	<p>The message to be displayed in the browser when access to a website has been blocked. A custom message can be entered with HTML formatting in the text box.</p> <p>You can embed the following variables in the message:</p> <ul style="list-style-type: none"> ● %SIP% - The source IP address that attempted the HTTP access. ● %DIP% - The destination IP address to which access was attempted. ● %URL% - The URL of the destination website. ● %CL% - The category to which the URL belongs. ● %RNAME% - The name of the router. <p>Default Message - Click to reset the administration message to the factory default.</p>

A-2 How to Block Facebook Service Accessed by the Users via Web Content Filter / URL Content Filter

There are two ways to block the facebook service, Web Content Filter and URL Content Filter.
Web Content Filter,

Benefits: Easily and quickly implement the category/website that you want to block.

Note: License is required.

URL Content Filter,

Benefits: Free, flexible for customize webpage.

Note: Manual setting (e.g., one keyword for one website.)

I. Via Web Content Filter

1. Make sure the Web Content Filter license is valid.

2. Open CSM >> Web Content Filter Profile to create a WCF profile. Check Social Networking with Action, Block.

3. Enable this profile in Firewall >> General Setup >> Default Rule.

General Setup

General Setup Default Rule

Actions for default rule:	Action/Profile	Syslog
Application	Pass	<input type="checkbox"/>
Filter	0 / 60000	<input type="checkbox"/>
Sessions Control	None	<input type="checkbox"/>
Quality of Service	None	<input type="checkbox"/>
User Management	None	<input type="checkbox"/>
APP Enforcement	None	<input type="checkbox"/>
URL Content Filter	None	<input type="checkbox"/>
Web Content Filter	1-Default	<input type="checkbox"/>
DNS Filter	None [Create New]	<input type="checkbox"/>
Advance Setting	1-Default Edit	

OK Cancel

Backup Firewall : Backup Restore Firewall: 選擇檔案 未選擇任何檔案 Restore

Note:
This will not backup the detail setting of Quality of Service and Schedule.

4. Next time when someone accesses facebook via this router, the web page would be blocked and the following message would be displayed instead.

The requested Web page
from 192.168.2.114
to www.facebook.com/
that is categorized with [Social Networking]
has been blocked by Web Content Filter.

Please contact your system administrator for further information.

[Powered by DrayTek]

II. Via URL Content Filter

A. Block the web page containing the word of “Facebook”

1. Open Object Settings>>Keyword Object. Click an index number to open the setting page.
2. In the field of Contents, please type *facebook*. Configure the settings as the following figure.

Objects Setting >> Keyword Object Setup

Profile Index : 1

Name	Facebook
Contents	facebook

Limit of Contents: Max 3 Words and 63 Characters.
Each word should be separated by a single space.

You can replace a character with %HEX.
Example:
Contents: backdoo%72 virus keep%20out

Result:
1. backdoor
2. virus
3. keep out

OK Clear Cancel

3. Open CSM>>URL Content Filter Profile. Click an index number to open the setting page.
4. Configure the settings as the following figure.

CSM >> URL Content Filter Profile

Profile Index: 1

Profile Name: Facebook

Priority: Either : URL Access Control First Log: Block

URL Access Control

Enable URL Access Control Prevent web access from IP address

Action: Block Group/Object Selections: Facebook Edit

System
Maintenance

Bandwidth
Management

User
Management

There are several items offered for the Vigor router system setup: System Status, TR-069, Administrator Password, User Password, Login Page Greeting, Configuration Backup, Syslog /Mail Alert, Time and Date, Management, Reboot System, Firmware Upgrade and Activation.

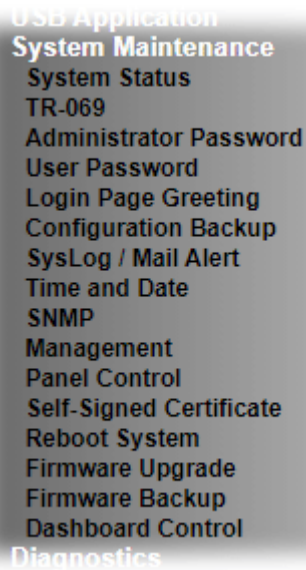

It is used to control the bandwidth of data transmission through configuration of Sessions Limit, Bandwidth Limit, and Quality of Service (QoS).

It is a security feature which disallows any IP traffic (except DHCP-related packets) from a particular host until that host has correctly supplied a valid username and password.

VI-1 System Maintenance

For the system setup, there are several items that you have to know the way of configuration: System Status, TR-069, Administrator Password, User Password, Login Page Greeting, Configuration Backup, Syslog /Mail Alert, Time and Date, Management, Reboot System, Firmware Upgrade, Firmware Backup and Dashboard Control.

Below shows the menu items for System Maintenance.

- USB Application
- System Maintenance**
- System Status
- TR-069
- Administrator Password
- User Password
- Login Page Greeting
- Configuration Backup
- SysLog / Mail Alert
- Time and Date
- SNMP

Item	Description
Model Name	Displays the model name of the router.
Firmware Version	Displays the firmware version of the router.
Build Date/Time	Displays the date and time of the current firmware build.
LAN	MAC Address - Displays the MAC address of the LAN Interface. IP Address - Displays the IP address of the LAN interface. Subnet Mask - Displays the subnet mask address of the LAN interface. DHCP Server - Displays the current status of DHCP server of the LAN interface. DNS - Displays the assigned IP address of the primary DNS.

WAN	<p>Link Status - Displays current connection status of the WAN interface.</p> <p>MAC Address - Displays the MAC address of the WAN Interface.</p> <p>Connection - Displays the connection type of the WAN interface..</p> <p>IP Address - Displays the IP address of the WAN interface.</p> <p>Default Gateway - Displays the assigned IP address of the default gateway.</p>
IPv6	<p>Address - Displays the IPv6 address for LAN.</p> <p>Scope - Displays the scope of IPv6 address. For example, IPv6 Link Local is non-routable and can only be used for local connections.</p> <p>Internet Access Mode - Displays the connection mode of the WAN interface.</p>

VI-1-2 TR-069

This device supports the TR-069 standard for remote management of customer-premises equipment (CPE) through an Auto Configuration Server, such as VigorACS.

VI-1-2-1 ACS and CPE Settings

System Maintenance >> TR-069 Setting

Available settings are explained as follows:

Item	Description
TR-069	Enables or disables TR-069 functionality.

ACS Server On	Choose the interface for connecting the router to the Auto Configuration Server.
ACS Server	<p>This section specifies the settings of the ACS Server.</p> <p>URL - Enter the URL for connecting to the ACS. Please refer to the Auto Configuration Server user's manual for detailed information.</p> <ul style="list-style-type: none"> ● Wizard - Click it to enter the IP address of VigorACS server, port number and the handler. ● Acquire URL form DHCP option 43 - Select to acquire the ACS URL from DHCP option 43. <p>Username/Password - Enter the credentials required to connect to the ACS server.</p> <ul style="list-style-type: none"> ● Test With Inform - Click to send an inform message using the selected Event Code to test if the CPE is able to communicate with the VigorACS server. ● Event Code - Select an event for the inform test. <p>Last Inform Response Time - Displays the time of the most recent Inform Response message received from the VigorACS.</p>
CPE Client	<p>This section specifies the settings of the CPE Client.</p> <p>Http / Https - Select Https if the connection is encrypted; otherwise select Http.</p> <p>Port - In the event of port conflicts, change the port number of the CPE.</p> <p>Username and Password - Enter the username and password that the VigorACS will use to connect to the CPE.</p>
Periodic Inform Settings	<p>Enable - The default setting is Enable, which means the CPE Client will periodically connect to the ACS Server to update its connection parameters at intervals specified in the Interval Time field.</p> <ul style="list-style-type: none"> ● Time Interval - Set interval time or schedule time for the router to send notification to CPE. <p>Disable - Select Disable to turn off periodic notifications.</p>
STUN Settings	<p>STUN allows the ACS Server to connect to the CPE Client even when the client is behind a network address translator (NAT).</p> <p>Disable - The default setting is Disable.</p> <p>Enable - Please Enter the relational settings listed below:</p> <ul style="list-style-type: none"> ● Server Address - Enter the IP address of the STUN server. ● Server Port - Enter the port number of the STUN server. ● Minimum Keep Alive Period - If STUN is enabled, the CPE must periodically transmit binding requests to the server for the purpose of maintaining the binding with the Gateway. Enter the minimum interval between keep-alive messages that the CPE client sends to the ACS server. The default setting is 60 seconds. ● Maximum Keep Alive Period - If STUN is enabled, the CPE must send binding request to the server for the purpose of maintaining the binding with the Gateway. Enter the maximum interval between keep-alive messages that the CPE client sends to the ACS server. A

	value of -1 indicates that no maximum period is specified.
Apply Settings to APs/Switches	<p>This feature is able to apply TR-069 settings (including STUN and ACS server settings) to all of APs managed by Vigor2135 at the same time.</p> <p>Disable - TR-069 and Related settings will not be applied to VigorAPs.</p> <p>Enable - TR-069 settings will be applied to VigorAPs after clicking OK. The VigorAP password must be specified.</p> <ul style="list-style-type: none"> ● AP Password - Enter the password of the VigorAP that you want to apply Vigor2135's TR-069 settings. <p>Specify STUN Settings for APs/Switches - After clicking the Enable radio button for Apply Settings to APs, if you want to apply specific STUN settings (i.e., different from the Vigor2135 STUN settings) to VigorAPs to meet specific requirements, check this box and enter the server IP address, server port, and minimum and maximum keep alive periods respectively.</p>

Select **OK** to save changes on the page, or **Clear** to reset all settings to factory defaults.

VI-1-2-2 Reporting Configuration

Information related to the router's health are divided into several categories and listed in this field. After checking the item(s), Vigor router will arrange and send corresponding data to VigorACS as a reference for the system administrator.

System Maintenance >> TR-069 Setting

ACS and CPE Settings	Reporting Configuration	Export Parameters
<p>CPE Notification Settings</p> <p><input type="checkbox"/> Enable</p> <p><input type="checkbox"/> Web Login</p> <p><input type="checkbox"/> Web Changed</p> <p><input type="checkbox"/> Bandwidth Utilization</p>		
<input type="button" value="OK"/>		

Available settings are explained as follows:

Item	Description
CPE Notification Settings	Enable - Check the box to select the notification item(s). Vigor router will send the utilization status to VigorACS.

Click **OK** to save changes on the page.

VI-1-2-3 Export Parameters

Click **Export** to save the TR-069 parameter settings as an ".xml".

System Maintenance >> TR-069 Setting

OK

Available settings are explained as follows:

Item	Description
Administrator Password	<p>The administrator can login web user interface of Vigor router to modify all of the settings to fit the requirements.</p> <p>Old Password - Enter the current password. The factory default is "admin".</p> <p>New Password - Enter the new password. The maximum length of the password is 23 characters.</p> <p>Confirm Password - Enter the new password again for confirmation.</p> <p>Enable 'admin' account login to Web UI from the Internet - Select to allow the administrator to log in from the Internet. This option is enabled when Administrator Local User is enabled (see below).</p> <p>Use only advanced authentication method for Admin "WAN" login - Advanced authentication method can offer a more secure network connection. Select to require mOTP or 2-step authentication when logging in from the WAN.</p> <ul style="list-style-type: none"> ● Mobile one-Time Password (mOTP) - Select to allow the use of mOTP passwords. Enter the PIN Code and Secret settings for getting one-time passwords. ● 2-Step Auth code via <u>SMS Profile</u> and/or <u>Mail Profile</u> - Select the SMS and/or Mail profiles and the destination SMS number and/or email address for transmitting the password.
Administrator Local User	<p>Usually, the system administrator has the highest privilege to modify the settings on the web user interface of the Vigor router. However, in some cases, it might be necessary to have other users in LAN to access into the web user interface of Vigor router.</p> <p>This feature allows you to add more administrators who can then log in to the web interface, with the same privileges as the administrator.</p> <p>Enable Local User - Check the box to allow other users to administer the router.</p> <ul style="list-style-type: none"> ● Use only advanced authentication method for Admin "WAN" login - Advanced authentication method can offer a more secure network connection. In general, the above basic password setting will be used for authentication if such option is disabled. Simply check the box to enable the following settings. ● Local User List - Shows all the users that are set up to administer the router. ● Specific User - Create the new user account as the local user. Then specify the authentication method (dividing into Basic and Advanced) for the user account. <ul style="list-style-type: none"> ➤ User Name - Enter a user name. ● Authentication method - Select from Basic or Advanced authentication methods. <ul style="list-style-type: none"> Basic - Static passwords will be used to authenticate users. ➤ Local Password - Enter the password for the local user. Advanced - Mobile One-time Passwords (mOTP) or

	<p>2-step authentication will be used to authenticate users.</p> <ul style="list-style-type: none">➤ Mobile one-Time Password (mOTP) - Select to allow the use of mOTP passwords. Enter the mOTP PIN Code and Secret that will be used to generate the one-time passwords.➤ 2-Step Authentication via <u>SMS Profile</u> and/or <u>Mail Profile</u> - Select the SMS and/or Mail profiles and the destination SMS number and/or email address for transmitting the password.● Add - After entering the user name and password above, click this button to create a new local user. The new user will be shown on the Local User List immediately.● Edit - If you wish to change a user in the Local User List, select it, perform the necessary modifications, and click this button to update the user.● Delete - If you wish to delete a user in the Local User List, select it and click this button to remove it.
--	--

Click **OK** to save changes on the page, and you will be directed to the login screen. Please log in with the new password.

VI-1-4 User Password

This page allows you to set new password for user operation.

System Maintenance >> User Password

Enable User Mode for simple web configuration

User Password

| [Set to Factory Default](#) |

Password	<input type="text" value="Max: 23 characters"/>
Confirm Password	<input type="text" value="Max: 23 characters"/>
Password Strength:	<input type="button" value="Weak"/> <input type="button" value="Medium"/> <input type="button" value="Strong"/>
Strong password requirements: 1. Have at least one upper-case letter and one lower-case letter. 2. Including non-alphanumeric characters is a plus.	

Note:

1. Password can contain a-z A-Z 0-9 , ; : . " < > * + = | ? @ # ^ ! ()
2. Password can't be all asterisks(*). For example, '*' or '*****' is illegal, but '123*' or '*45' is OK.

Available settings are explained as follows:

Item	Description
Enable User Mode for simple web configuration	Check this box to enable User Mode for web user interface with the password typed here for simple web configuration. The simple web user interface settings differ from those on the full web user interface seen when logged in using the administrator password.
Password	Enter the password. The maximum length of the password is 31 characters.
Confirm Password	Enter the password again for verification.
Password Strength	Shows the security strength of the password specified above.
Set to Factory Default	Click to return to the factory default setting.

Click **OK** to save changes on the page, and you will be directed to the login screen. Please window will appear. Please log in with the new password.

Here are the steps involved in setting up the router for User Mode Access:

1. Navigate to **System Maintenance>>User Password** in the web user interface.
2. Check the box of **Enable User Mode for simple web configuration** to enable user mode operation. Enter a new password in the Password field and click **OK**.

System Maintenance >> User Password

Enable User Mode for simple web configuration

6. The main screen with User Mode will be shown:

Only basic settings are available in User Mode. These are a subset of the Admin Mode settings.

Info

Setting in User Mode can be configured as same as in Admin Mode.

VI-1-5 Login Page Greeting

When you want to access into the web user interface of Vigor router, the system will ask you to offer username and password first. At that moment, the background of the web page is blank and no heading will be displayed on the Login window. This page allows you to specify login URL and the heading on the Login window if you have such requirement.

This section allows you to customize the login page by adding a message and/or setting the page title.

System Maintenance >> Login Page Greeting

Login Page Greeting

Login Page Logo: Default 未選擇任何檔案 (Max 524 × 352 pixel)

Enable Greeting

Login Page Title:

Welcome Message and Bulletin (Max 511 characters) [Preview](#) | [Set to Factory Default](#) |

```
<h1><b><font color=red>Welcome Message</font></b></h1><p>This welcome message is displayed in the Login page of the router. Replace this text with your own message. </p><ol><li>The welcome message can be written in HTML so lists such as this one can be created </li><li>Other markup tags such as p, font or img can be used</li></ol>
```

Examples of Welcome Message and Bulletin:
 <h1>Welcome Message</h1>
 <p>Message</p>

Available settings are explained as follows:

Item	Description
Login Page Logo	Set an image which will be shown above the log in window. Default - The Enable Greeting feature is available to set the login page title. Blank - No image / no greeting. Upload a file - Choose an image file and click Upload. Later the selected image will be shown on the log in window.
Enable Greeting	Check this box to enable the login customization function.
Login Page Title	Enter a brief description (e.g., Welcome to DrayTek) which will be shown on the heading of the login dialog.
Welcome Message and Bulletin	Enter words or sentences here. It will be displayed for bulletin message. In addition, it can be displayed on the login dialog at the bottom. Note that do not enter URL redirect link here.
Preview	Click to preview the customized login window based on the settings entered on this page.

Set to Factory Default

Click to return to the factory default setting.

Below shows an example of a customized login page with the values entered in the Login Page Title and Welcome Message and Bulletin fields.

Welcome Message

This welcome message is displayed in the Login page of the router. Replace this text with your own message.

1. The welcome message can be written in HTML so lists such as this one can be created
2. Other markup tags such as p, font or img can be used

VI-1-6 Configuration Backup

This function allows the backup and restoration of router settings. In addition to restoring Vigor2135's own configuration backup, it is possible to restore backups from certain DrayTek routers such as Vigor2820, Vigor2830 and Vigor2850 series on the Vigor2135.

Backing up the Configuration

Follow the steps below to backup your configuration.

1. Go to **System Maintenance >> Configuration Backup**. The following page will be shown.

System Maintenance >> Configuration Backup

Configuration Backup / Restoration

Restore
Restore settings from a configuration file.

選擇檔案 未選擇任何檔案

USB Storage 

Restore configuration except the login password.

Note:
This will work only if the selected configuration file was created from this device.

Backup
Back up the current settings into a configuration file.

Protect with password

Note:
The router's certificates are not part of the configuration file. Please use [Certificate Management >> Certificate Backup](#) for backup.

Auto Backup to USB storage

Enable

Backup folder 

Periodic backup
Cycle duration: days and hours

Backup after change configuration

Note:

1. Auto backup to USB: if settings do not change, configuration doesn't backup.
2. Auto backup to USB: if configuration backup multiple times in one hour, the old file will be overwritten with the same filename.

Available settings are explained as follows:

Item	Description
Restore	<p>Restore settings from a configuration file - Click the Select File button to specify a file to be restored or click USB Storage (if a USB storage disk connected) to choose the configuration file.</p> <p>Restore configuration except the login password - Select to exclude the password from getting restored from the backup.</p> <p>Restore - Click to initiate restoration of configuration. If the backup file is encrypted, you will be asked to enter the password.</p>
Backup	Click it to perform the configuration backup of this router.

	<p>Protect with password- Select to encrypt the backup with a password. You will be prompted to enter the password as shown below:</p> <div data-bbox="710 309 1417 571"> </div> <ul style="list-style-type: none"> ● Password - Enter a new password for encrypting the configuration file. ● Confirm Password - Enter the new password again for confirmation. <p>Backup - Click to initiate the backup process.</p>
<p>Auto Backup to USB storage</p>	<p>The configuration can be stored to a USB connecting to Vigor router as a backup.</p> <p>Enable - Check the box to enable the function.</p> <p>Backup folder - Set the path for downloading.</p> <p>Periodic backup - Set the circle duration for backup.</p> <p>Backup after change configuration - Backup will be executed whenever the configuration is changed.</p>

2. Click the **Backup** button, and the File Download dialog will be shown. Depending on your browser, you may be prompted to select a location to save the file, or the file may be saved in the default download location of your browser.

The configuration will download automatically to your computer as a file named config.cfg. The above example is using **Windows** platform for demonstrating examples. The **Mac** or **Linux** platform will appear different windows, but the backup function is still available.

Info

Configuration Backup does not include certificates stored on the router. Please back up certificates separately by going to Certificate Management >> Certificate Backup.

Restoring the Configuration

1. Go to **System Maintenance >> Configuration Backup**. The following windows will be shown.

System Maintenance >> Configuration Backup

Configuration Backup / Restoration

Restore
Restore settings from a configuration file.
 選擇檔案 未選擇任何檔案
 USB Storage 
 Restore configuration except the login password.
Note:
This will work only if the selected configuration file was created from this device.

Backup
Back up the current settings into a configuration file.
 Protect with password

Note:
The router's certificates are not part of the configuration file. Please use [Certificate Management >> Certificate Backup](#) for backup.

Auto Backup to USB storage
 Enable
Backup folder 
 Periodic backup
Cycle duration: days and hours
 Backup after change configuration

Note:

1. Auto backup to USB: if settings do not change, configuration doesn't backup.
2. Auto backup to USB: if configuration backup multiple times in one hour, the old file will be overwritten with the same filename.

2. Click the **Choose File** button under **Backup** to bring up the open file dialog box to select the configuration file to be uploaded and restored.
3. Click the **Restore** button and wait for few seconds.

VI-1-7 Syslog/Mail Alert

SysLog function is provided for users to monitor router.

System Maintenance >> SysLog / Mail Alert Setup

SysLog / Mail Alert Setup	
<p>SysLog Access Setup</p> <p><input checked="" type="checkbox"/> Enable</p> <p>Syslog Save to:</p> <p><input checked="" type="checkbox"/> Syslog Server</p> <p><input type="checkbox"/> USB Disk</p> <p>Maximum Syslog folder space: <input type="text" value="1"/> GB</p> <p>When Syslog folder is full: <input type="text" value="Overwrite oldest logs"/></p> <p>Router Name</p> <p>Server IP/Hostname: <input type="text" value="DrayTek"/></p> <p>Destination Port: <input type="text" value="514"/></p> <p>Mail Syslog: <input type="checkbox"/> Enable</p> <p>Enable syslog message:</p> <p><input checked="" type="checkbox"/> Firewall Log</p> <p><input checked="" type="checkbox"/> VPN Log</p> <p><input checked="" type="checkbox"/> User Access Log</p> <p><input checked="" type="checkbox"/> WAN Log</p> <p><input checked="" type="checkbox"/> Router/DSL information</p> <p><input checked="" type="checkbox"/> WLAN Log</p>	<p>Mail Alert Setup</p> <p><input checked="" type="checkbox"/> Enable <input type="button" value="Send a test e-mail"/></p> <p>Interface: <input type="text" value="Any"/></p> <p>SMTP Server: <input type="text"/></p> <p>SMTP Port: <input type="text" value="25"/></p> <p>Mail To: <input type="text"/></p> <p>Sender Address: <input type="text"/></p> <p><input type="checkbox"/> Use SSL</p> <p><input type="checkbox"/> Authentication</p> <p>Username: <input type="text"/></p> <p>Password: <input type="text"/></p> <p>Enable E-Mail Alert:</p> <p><input checked="" type="checkbox"/> DoS Attack</p> <p><input checked="" type="checkbox"/> APPE</p> <p><input checked="" type="checkbox"/> VPN LOG</p> <p><input type="checkbox"/> APPE Signature</p> <p><input type="checkbox"/> Debug Log</p>

Note:

1. USB Syslog space is available from 256-1024 MB or 1-16 GB.
2. Mail Syslog cannot be activated unless USB Disk is ticked for "Syslog Save to".
3. Mail Syslog feature will send the Syslog when it is full.
4. We only support secured SMTP connection on port 465.

Available settings are explained as follows:

Item	Description
SysLog Access Setup	<p>Enable - Select to enable the Syslog function.</p> <p>Syslog Save to - Check Syslog Server and / or USB Disk.</p> <ul style="list-style-type: none"> ● Syslog Server - Events will be sent to a Syslog server. ● USB Disk - Events will be saved to a USB storage device connected to the router. ● Maximum Syslog folder space - Set a space (unit GB/MB) to store event logs. ● When Syslog folder is full - Specify the action (overwrite the olderest logs or stop logging) to be executed.
Router Name	<p>Shows the name of the router set in System Maintenance >> Management. This name will be used to identify the router in the Syslog entries.</p> <p>To set or modify the router name, click the hyperlink and you will be taken to System Maintenance >> Management where you can enter the value.</p> <p>Server IP Address /Hostname - Enter the IP address / hostname of the Syslog server.</p> <p>Destination Port - Enter the port for the Syslog server.</p>

	<p>Mail Syslog - Select to enable sending Syslog messages by email.</p> <p>Enable syslog message - Select the events to be recorded by syslog.</p>
Mail Alert Setup	<p>Enable - Select to enable the Mail Alert.</p> <p>Send a test e-mail - Click to send a test email message using the settings below.</p> <p>Interface - Specify the WAN interface for a mail passing through.</p> <p>SMTP Server - Enter the address of the SMTP server used to send email.</p> <p>SMTP Port - Enter the port of the SMTP server. Default setting is 25.</p> <p>Mail To - Enter the email address of the recipient.</p> <p>Sender Address - Enter the email address of the sender.</p> <p>Use SSL - Check this box to use port 465 for SMTP server for some e-mail server uses https as the transmission method.</p> <p>Authentication - Select this checkbox and enter the username and password if the SMTP server requires authentication.</p> <ul style="list-style-type: none"> ● User Name - Enter the user name for authentication. ● Password - Enter the password for authentication. <p>Enable E-mail Alert - Select the event types that will trigger email alerts.</p>

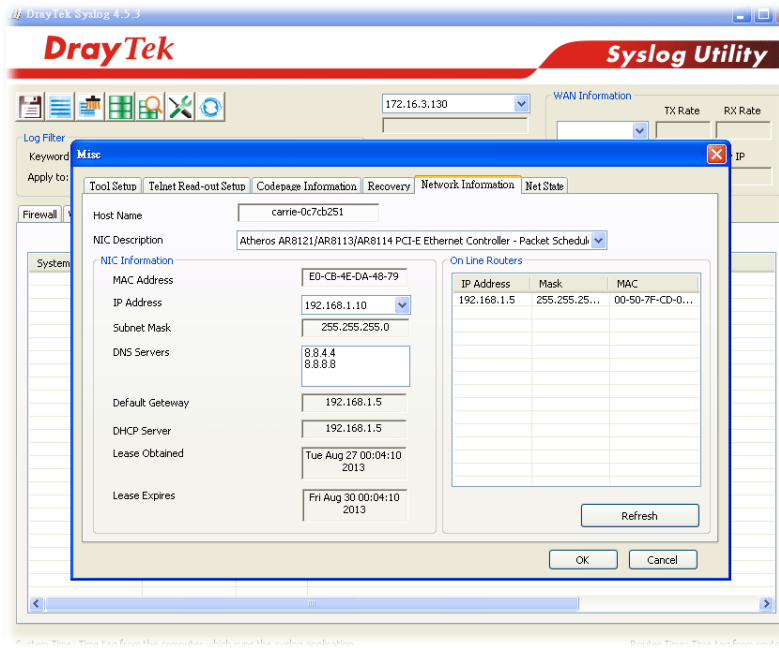

Select **OK** to save changes on the page, or **Clear** to reset all settings to factory defaults.

To view the Syslog message, please follow the steps below:

1. On the **Syslog / Mail Alert Setup** screen, enter the monitor PC's IP address in the **Server IP Address** field.
2. Install the Router Tools from DrayTek web site. After installation, start Syslog by clicking on **Router Tools>>Syslog** in the Windows Start Menu.

3. In the Syslog application, select the router you wish to monitor. Remember to select the network adapter to be used to connect to the router under Network Information, or else Syslog traffic cannot be received from the router.

VI-1-8 Time and Date

This section allows you to configure settings related to the system date and time.

System Maintenance >> Time and Date

Time Information

Current System Time: 2000 Jan 1 Sat 4 : 42 : 43 Inquire Time

Time Setup

Use Browser Time
 Use Internet Time

Time Server: pool.ntp.org

Priority: Auto

Time Zone: (GMT) Greenwich Mean Time : Dublin

Enable Daylight Saving: Advanced

Automatically Update Interval: 30 mins

Send NTP Request Through: Auto

OK Cancel

Available settings are explained as follows:

Item	Description
Current System Time	Click Inquire Time to retrieve the current time from the time server.
Use Browser Time	Select this option to let the router set its system time using the time reported by the web browser.
Use Internet Time	Select this option to let the browser set its system time by retrieving time information from the specified network time server using the Network Time Protocol (NTP).
Time Server	Enter the address of the time server.
Priority	Select Auto or IPv6 First as the priority.
Time Zone	Select the time zone where the router is located.
Enable Daylight Saving	<p>Check the box to enable Daylight Saving Time (DST) if it is applicable to your location.</p> <p>Advanced - Click to enter a custom schedule to enable DST.</p> <div style="border: 1px solid black; padding: 5px; margin: 5px 0;"> <p>Daylight Saving Advanced</p> <p><input checked="" type="radio"/> Default Start: Last Sunday in March End: Last Sunday in October</p> <p><input type="radio"/> Customized: By Date Start: Month Day 00:00 End: Month Day 00:00</p> <p><input type="radio"/> Customized: By Weekday Start: January First Sunday 00:00 End: January First Sunday 00:00</p> <p style="text-align: center;"> OK Close </p> </div> <p>Use the default time setting or set user defined time for your requirement.</p> <p>Default - Uses the default DST schedule for the time zone.</p>

	<p>Date Range - Select this option if DST starts and ends on fixed dates.</p> <p>Yearly - Select this option if DST starts and ends on certain days of the week.</p>
Automatically Update Interval	Select the time interval at which the router updates the system time.
Send NTP Request Through	Specify a WAN interface to send NTP request for time synchronization.

Select OK to save changes on the page, or **Cancel** to discard changes without saving.

VI-1-9 SNMP

This section allows you to configure settings for SNMP and SNMPv3 services.

The SNMPv3 is more secure than SNMP through the use of encryption (supports AES and DES) and authentication (supports MD5 and SHA) for the management needs.

System Maintenance >> SNMP

SNMP Setup

Enable SNMP Agent

Available settings are explained as follows:

Item	Description
Enable SNMP Agent	Check to enable SNMP function. Then, enable SNMPV1 agent/SNMPV2C agent.
Get Community	Enter the Get Community string. The default setting is

	<p>public. Devices that send requests to retrieve information using get commands must pass the correct Get Community string.</p> <p>The maximum allowed length is 23 characters.</p>
Set Community	<p>Enter the Set Community string. The default setting is private. Devices that send requests to change settings using set commands must pass the correct Set Community string.</p> <p>The maximum length of the text is 23 characters.</p>
Manager Host IP (IPv4)	<p>Enter the IPv4 address of hosts that are allowed to issue SNMP commands. If this field is left blank, any IPv4 LAN host is allowed to issue SNMP commands.</p>
Manager Host IP (IPv6)	<p>Enter the IPv6 address of hosts that are allowed to issue SNMP commands. If this field is left blank, any IPv6 LAN host is allowed to issue SNMP commands.</p>
Trap Community	<p>Enter the Trap Community string. The default setting is public. Devices that send unsolicited messages to the SNMP console must pass the correct Trap Community string.</p> <p>The maximum length of the text is 23 characters.</p>
Notification Host IP (IPv4)	<p>Enter the IPv4 address of hosts that are allowed to be sent SNMP traps.</p>
Notification Host IP (IPv6)	<p>Enter the IPv6 address of hosts that are allowed to be sent SNMP traps.</p>
Trap Timeout	<p>The default setting is 10 seconds.</p>
Enable SNMPV3 Agent	<p>Check to enable SNMPV3 function.</p>
USM User	<p>USM means user-based security mode.</p> <p>Enter the username to be used for authentication. The maximum allowed length is 23 characters.</p>
Auth Algorithm	<p>Choose one of the hashing methods to be used with the authentication algorithm.</p>
Auth Password	<p>Enter a password for authentication. The maximum allowed length is 23 characters.</p>
Privacy Algorithm	<p>Choose an encryption method as the privacy algorithm.</p>
Privacy Password	<p>Enter a password for privacy. The maximum allowed length is 23 characters.</p>

OK

Available settings are explained as follows:

Item	Description
Router Name	Enter the router name as provided by ISP.
Default: Disable Auto-Logout	If enabled, the auto-logout function for web user interface will be disabled.

	 <p>The web user interface will not terminate until you manually click the Logout icon.</p>
Enable Validation Code in Internet/LAN Access	<p>If enabled, Vigor router will require users to enter a validation code as shown in an image when they log in.</p>
Internet Access Control	<p>Allow management from the Internet - Enable the checkbox to allow system administrators to login from the Internet, and then select the specific services that are allowed to be remotely administered.</p> <p>Domain name allowed - This setting is only available if DNS filtering is enabled, applying DNS filter profile in firewall rules, or enabling DNS Filter Local Setting. The router will only allow connections to the WebUI using domain addresses configured in either DDNS profiles or this section.</p> <p>If DNS filtering is disabled, this setting will be disabled, and any domain address that resolves to the router's WAN IP address can be used to connect to the WebUI.</p> <p>Disable PING from the Internet - Select to reject all PING packets from the Internet. For increased security, this setting is enabled by default.</p>
Access List from the Internet	<p>The ability of system administrators to log into the router can be restricted to up to 10 specific hosts or networks.</p> <p>Apply Access List to PING - When this option is checked and Disable PING from the Internet is unchecked, pings originating from the Internet will be accepted only if they are from one of the IP addresses and/or subnet masks specified below. This option has no effect if Disable PING from the Internet is checked, which blocks all pings from the Internet.</p> <p>IP Object- Select a configured IP object.</p> <p>IP / Mask - Shows the IP address and/or subnet mask of the selected IP object.</p>
Management Port Setup	<p>User Define Ports - Check to specify user-defined port numbers for the Telnet, HTTP, HTTPS, FTP, TR-069 and SSH servers.</p> <p>Default Ports - Check to use standard port numbers for the Telnet and HTTP servers.</p>
Brute Force Protection	<p>Any client trying to access into Internet via Vigor router will be asked for passing through user authentication. Such feature can prevent Vigor router from attacks when a hacker tries every possible combination of letters, numbers and symbols until find out the correct combination of password.</p> <p>Enable brute force login protection - Select to enable detection of brute force login attempts.</p>

	<p>Maximum login failure - Specify the maximum number of failed login attempts before further login is blocked.</p> <p>Penalty period - Set the lockout time after maximum number of login attempts has been exceeded. The user will be unable to attempt to log in until the specified time has passed.</p> <p>Blocked IP List - Display, in a new browser window, IP addresses that are currently blocked from logging into the router.</p>
TLS/SSL Encryption Setup	<p>Enable SSL 3.0/1.0/1.1/1.2/1.3 - Check the box to enable SSL 3.0/1.0/1.1/1.2/1.3 encryption protocols.</p> <p>For improved security, the HTTPS and SSL VPN servers that are built into the router have been upgraded to TLS 1.x protocol. If you are using an old web browser (eg. IE 6.0) or an old version of the SmartVPN Client, you may need to enable SSL 3.0 to connect to the router. However, it is recommended that you instead upgrade your web browser or SmartVPN client to a version that supports TLS protocols that are far more secure than SSL.</p>
AP Management	<p>Enable AP Management - Check to enable the access point management function. If not, menu items related to Central Management>>AP will be hidden.</p>
Device Management	<p>Check to enable the device management function.</p> <p>Respond to external device - If selected, Vigor2135 will function as a slave device. When an external device (master device) sends packets to the Vigor2135 to attempt to manage it, the Vigor2135 will respond to the request coming from the external device which is able to manage Vigor2135.</p>

Select **OK** to save changes on the page.

Available settings are explained as follows:

Item	Description
Allow management from LAN	Enable the checkbox to allow system administrators to login from LAN interface. There are several servers provided by the system which allow you to manage the router from LAN interface. Check the box(es) to specify.
Apply To Subnet	Check the LAN interface for the administrator to use for accessing into web user interface of Vigor router. Index in <u>IP Object</u> - Enter the index number of the IP object profile. Related IP address will appear automatically.

Select OK to save changes on the page.

VI-1-11 Panel Control

You may customize the behavior of the LEDs, buttons, WLAN, USB and LAN ports on the front panel.

For LED

By default, LEDs on the front panel illuminate or blink during operation to show the status of the various functions on the router. However, you may configure them to remain off at all times, or remain off until a button is pressed to wake them up.

System Maintenance >> Panel Control

LED	Button	USB	LAN Port	Refresh
<input checked="" type="checkbox"/> Enable LED <input type="checkbox"/> Enable Sleep Mode Turn off LED after <u> 1 </u> minutes (Default: 1 minute)				

Note:

Enable the Sleep Mode will make the functions of "Wireless Button" and "Factory Reset Button" on the front panel as below:

LED Status	LED On	LED Off
Wireless Button	Wireless On/Off/WPS	Turn LED On*
Factory Reset Button	Press 1 second: Turn LED off immediately* Press till the ACT light flashing: Reset router	

*Still functional even the buttons are disabled.

OK

Available settings are explained as follows:

Item	Description
Refresh	Click to refresh the page to display the latest information.
Enable LED	Select to enable the LEDs to function according to the configured settings. Deselect to disable LEDs entirely.
Enable Sleep Mode	Select to let the system turn off the LEDs after the specified number of minutes has elapsed. When Sleep Mode is enabled, the LEDs can be woken up by pressing one of the following buttons: <ul style="list-style-type: none"> ● Wireless LAN ON/OFF/WPS on the front panel ● Factory Reset on the front panel ● Wake up LED on this configuration page

	
Status	<p>Shows the status of the LEDs.</p> <p>When the following is shown, the LEDs are in sleep mode.</p> <p>Status : Sleep Wake up LED</p> <p>To wake them up, do one of the following actions:</p> <ul style="list-style-type: none"> ● press the Wake up LED button on this page ● press the Wireless On/Off/WPS button on the front panel ● press the Factory Reset button on the front panel. <p>When the following is shown, the LEDs are awake.</p> <p>Status : Awake, sleep after 1 minutes LED sleep immediately</p> <p>To put them to sleep immediately, perform one of the following actions:</p> <ul style="list-style-type: none"> ● press the LED sleep immediately button on this page ● press the Factory Reset button on the front panel
Wake up LED	<p>Click to resume operation of the LED after they have gone to sleep.</p>

Select OK to save changes on the page.

For Button

The primary functions of the **Factory Reset** and **Wireless ON/OFF/WPS** front-panel buttons (reset to factory defaults and wireless control, respectively) are enabled by default, but they can be enabled or disabled as needed.

When the **Factory Reset** button is set to **Disabled**, the router cannot be reset during normal operation. Other functions of the reset button (such as starting up the TFTP server to upload firmware during power on, and controlling the illumination of the front panel LEDs when LED sleep mode is enabled) can still be used.

When the **Wireless ON/OFF/WPS** button is set to **Disabled**, the button cannot be used to turn on or off the wireless network, nor can it be used to start the WPS pairing process. However, the front panel LEDs can be woken up when LED sleep mode is enabled.

Click the **Button** tab to get the following page.

System Maintenance >> Panel Control

LED	Button	USB	LAN Port	Refresh						
<table border="1"> <thead> <tr> <th>Enable</th> <th>Button</th> </tr> </thead> <tbody> <tr> <td style="text-align: center;"><input checked="" type="checkbox"/></td> <td>Wireless</td> </tr> <tr> <td style="text-align: center;"><input checked="" type="checkbox"/></td> <td>Factory Reset</td> </tr> </tbody> </table>					Enable	Button	<input checked="" type="checkbox"/>	Wireless	<input checked="" type="checkbox"/>	Factory Reset
Enable	Button									
<input checked="" type="checkbox"/>	Wireless									
<input checked="" type="checkbox"/>	Factory Reset									

Note:

Enable the Sleep Mode will make the functions of "Wireless Button" and "Factory Reset Button" on the front panel as below:

LED Status	LED On	LED Off
Wireless Button	Wireless On/Off/WPS	Turn LED On*
Factory Reset Button	Press 1 second: Turn LED off immediately* Press till the ACT light flashing: Reset router	

*Still functional even the buttons are disabled.

Available settings are explained as follows:

Item	Description
Refresh	Click to refresh the page to display the latest information.
Enable Factory Reset Button	The default value is Enabled . Deselect to disable the reset function of the factory reset button. Disabling the Factory Reset button only prevents it from being used to reboot Vigor router with default settings. It can still be used to wake up the LEDs when LED sleep mode is enabled.
Enable Wireless Button	The default value is Enabled . Deselect to disable the ability of the Wireless button to control WLAN and WPS functions. Disabling the wireless button only prevents it from being used to control WLAN functions. It can still be used to wake up the LEDs when LED sleep mode is enabled.

Select OK to save changes on the page.

For USB

The USB ports can be individually enabled or disabled. When a USB port is disabled, attached devices will not be recognized by the router.

System Maintenance >> Panel Control

LED	Button	USB	LAN Port	Refresh									
<table border="1"> <thead> <tr> <th>Port</th> <th>Enable</th> <th>Status</th> </tr> </thead> <tbody> <tr> <td style="text-align: center;">1</td> <td style="text-align: center;"><input checked="" type="checkbox"/></td> <td style="text-align: center;">No Device</td> </tr> <tr> <td style="text-align: center;">2</td> <td style="text-align: center;"><input checked="" type="checkbox"/></td> <td style="text-align: center;">No Device</td> </tr> </tbody> </table>					Port	Enable	Status	1	<input checked="" type="checkbox"/>	No Device	2	<input checked="" type="checkbox"/>	No Device

VI-1-13 Reboot System

The Web user interface may be used to restart your router. Click **Reboot System** from **System Maintenance** to bring up the following page.

System Maintenance >> Reboot System

Reboot System

Do you want to reboot your router ?

Using current configuration
 Using factory default configuration

Reboot Now

Auto Reboot Time Schedule

Schedule Profile : None ▾, None ▾, None ▾, None ▾

Note:
Action and Duration Time settings will be ignored.

OK Cancel

Available settings are explained as follows:

Item	Description
Reboot System	<p>Select one of the following options, and press the Reboot Now button to reboot the router.</p> <p>Using current configuration - Select this option to reboot the router using the current configuration.</p> <p>Using factory default configuration - Select this option to reset the router's configuration to the factory defaults before rebooting.</p>
Auto Reboot Time Schedule	<p>Schedule Profile - Select up to 4 user-configured schedules to reboot the router on a scheduled basis.</p>

Select **OK** to save changes on the page, or **Cancel** to discard changes without saving.

Info

When the system pops up Reboot System web page after you configure web settings, please click Reboot Now to reboot your router for ensuring normal operation and preventing unexpected errors of the router in the future.

VI-1-14 Firmware Upgrade

Click System Maintenance>> Firmware Upgrade to upgrade firmware upgrade.

System Maintenance >> Firmware Upgrade 

Firmware Version Status

Current Firmware Version: 4.2.1.2_RC1_STD	Check The Latest Firmware
---	---

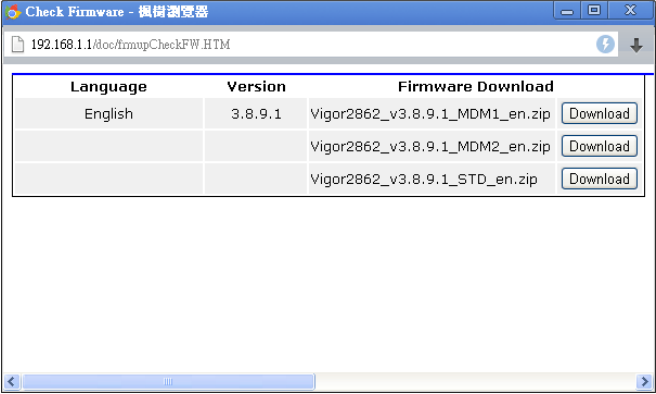

Web Firmware Upgrade

<p>Select a firmware file.</p> <p>選擇檔案 未選擇任何檔案</p> <p>Click Upgrade to upload the file. Upgrade Preview</p>

Note:

Upgrade using the ALL file will retain existing router configuration, whereas using the RST file will reset the configuration to factory defaults.

Available settings are explained as follows:

Item	Description
Firmware Versiono Status	<p>Check The Latest Firmware - Click to check for updated firmware.</p> <p>Any available new firmware files will be displayed and you can download any one of them by clicking Download. After the file has been downloaded, click Select followed by Upgrade to perform the firmware upgrade.</p>  <p>(重新截圖 for 2135)</p>
Web Firmware Upgrade	<p>Click Browse... to select the firmware file, followed by Upgrade to start the upgrade process, or Preview to display detailed information about the selected firmware file:</p>

VI-1-15 Firmware Backup

The firmware for Vigor router can be saved on the host as a backup firmware. After that, if the router crashes due to the firmware error, the backup firmware will be applied to make the router run normally.

System Maintenance >> Firmware Backup

Automatic Firmware Recovery

Enable automatic firmware recovery

If the router unexpectedly reboots three times in a row then the backup firmware will be restored to the unit on the third reboot.

Backup Setting

Backup after reboot

Backup after system uptime of day hour (max. 7 days)

Backup manually

Backup Firmware:

Last backup:

OK

Cancel

Available settings are explained as follows:

Item	Description
Automatic Firmware Recovery	Enable automatic firmware recovery- If this option is enabled, the router will restore the most recently backed-up firmware after the router reboots unexpectedly three times.
Backup Setting	<p>This option controls the backup behavior of the router.</p> <ul style="list-style-type: none"> ● Backup after reboot - The router makes a copy of the current firmware immediately after it reboots ● Backup after system uptime... - The router makes a copy of the current firmware after it has run for the specified length of time after boot-up. ● Backup manually - the router will not automatically create a backup copy of the firmware. Click this option and click OK, firmware backup will be performed immediately. <p>Backup Firmware - Displays recent firmware backup version.</p> <p>Last backup - Displays the time of recent firmware backup.</p>

Select OK to save changes on the page, or Cancel to discard changes without saving.

VI-1-16 Dashboard Control

There are nine groups of setting information which can be displayed on Dashboard as a reference for administrator/user. Except for Front Panel and System Information, the settings information regarding to the groups listed on this page can be hidden if required.

System Maintenance >> Dashboard Control

Cancel

VI-2 Bandwidth Management

Sessions Limit

When LAN clients share a common public IP address by means of Network Address Translation (NAT), the router must track NAT sessions so that traffic to and from the WAN can reach the intended destinations. There is a finite number of sessions that can be tracked by the router, and by setting session limits will ensure that the router does not run out of resources. This is especially important when P2P applications are used. P2P applications, such as BitTorrent, that attempt to simultaneously establish connections to as many WAN hosts as possible.

Bandwidth Limit

Bandwidth Limit ensures LAN clients get their fair share of network bandwidth by placing restrictions on upstream and downstream network speeds.

Quality of Service (QoS)

QoS (Quality of Service) ensures that all LAN clients receive their fair share of bandwidth that is required for applications to function properly and efficiently.

Without QoS, it is possible that certain applications may consume excessive network resources that they degrade performance of more important applications, especially ones that are less tolerant of jitter (delay variation) or lost or delayed packets. Additionally, at times of network congestion, QoS is able to prioritize different types of traffic according to their predefined priority, thus ensuring traffic of higher importance gets processed first.

A typical QoS deployment consists of two components:

- Classification: Identifying low-latency or crucial applications and marking them for high-priority service level enforcement throughout the network.
- Scheduling: Prioritizing packets by assigning them to different queues and service types according to service levels.

APP QoS

APP QoS allows QoS to be applied to select protocols and applications.

Protocols and applications fall into two categories: Traceable and Untraceable. Traceable applications are those whose traffic can be 100% traced, and can be assigned a specific QoS class. Untraceable applications, on the other hand, are detected when they attempt to establish connections to remote hosts, and all traffic between the remote hosts and the local network will be placed under QoS, within the same QoS class.

Web User Interface

Bandwidth management ensures efficient allocation of network bandwidth for various applications.

To set up Bandwidth Management, from the Main Menu, select **Bandwidth Management**.

VI-2-1 Sessions Limit

To configure Sessions Limit, from the **Bandwidth Management** menu, select **Sessions Limit** to open the setup page.

Bandwidth Management >> Sessions Limit

IPv4
IPv6

Enable Disable

Default Max Sessions:

Limitation List (Max. 10 entries)

Index	Start IP	End IP	Max Sessions

Specific Limitation

Start IP: End IP:

Maximum Sessions:

Administration Message (Max 255 characters) Default Message

You have reached the maximum number of permitted Internet sessions.<p>Please close one or more applications to allow further Internet access.<p>Contact your system administrator for further information.

Time Schedule

Schedule Profile : None None None None

Note: Action and Idle Timeout settings will be ignored.

Available settings are explained as follows:

Item	Description
Enable / Disable	<p>Enable - Select to activate session limit function.</p> <p>Disable - Select to deactivate session limit function.</p> <p>Default Max Sessions - The default maximum number of sessions allowed per LAN client, unless overridden by</p>

	specifying a different number in the Limitation List.
Limitation List	Displays specific limitation entries.
Specific Limitation	<p>Start IP - The beginning IP address for this limit entry.</p> <p>End IP - The ending IP address for limit entry.</p> <p>Max Sessions - The maximum number of NAT sessions allowed per LAN client. If no value is entered, the Default Max Sessions value is used.</p> <p>Add - Creates a new limit entry using the above Specific Limitation values.</p> <p>Edit - To edit an existing entry, select the entry from the Limitation List, make the appropriate changes in Specific Limitation, then click Edit.</p> <p>Delete - To delete an entry, select it from the Limitation List, then click the Delete button.</p>
Administration Message	<p>Message to be displayed in a web browser on the LAN client when the maximum number of NAT sessions has been reached.</p> <p>Default Message - Click to reset the administration message to the factory default.</p>
Time Schedule	Schedule Profile - Specify up to 4 time schedule entries to enable or disable the WAN.

To save changes on the page, click OK.

VI-2-2 Bandwidth Limit

To configure the Bandwidth Limit feature, from the **Bandwidth Management** menu, select **Bandwidth Limit** to bring up the configuration page.

Bandwidth Management >> Bandwidth Limit

WAN3	<input type="checkbox"/>	BOTH	100	Mbps	100	Mbps	25 %	25 %	25 %	25 %	Status

Note:
QoS may not work properly if the bandwidth entered is not correct. Before enable QoS, you may run speed test (from e.g., <http://speedtest.net>) or contact your ISP for the accurate bandwidth.

Index	Enable	Qos Class	Local Address	Remote Address	DSCP	Service Type
Add						

Note:

- The packets that don't match any class rules above will be classified into 'Others'
- Go to **User Defined Service Type** to edit/delete user-defined service type profiles.
- Hardware Acceleration will not work on wired WAN interfaces with QoS enabled.

VoIP Prioritization

Enable the First Priority for VoIP SIP/RTP:

SIP UDP Port: (Default:5060)

Tag Outbound Traffic

Class 1	<input type="checkbox"/> Add DSCP or Precedence Value	Default
Class 2	<input type="checkbox"/> Add DSCP or Precedence Value	Default
Class 3	<input type="checkbox"/> Add DSCP or Precedence Value	Default

OK Cancel

Available settings are explained as follows:

Item	Description
General Setup	<p>Index - Link of WAN interface.</p> <p>Enable - Check the box to enable the QoS function for WAN interface. If it is enabled, you can configure general QoS setting for each WAN interface.</p> <ul style="list-style-type: none"> ● Direction -Direction of traffic to which QoS is to be applied (Inbound, Outbound, or Both). <ul style="list-style-type: none"> - IN - Apply QoS to incoming traffic only. - OUT - Apply QoS to outgoing traffic only. - BOTH - Apply to both incoming and outgoing traffic. ● Inbound/Outbound Bandwidth - The inbound / outbound bandwidth of the WAN. ● Class 1 ~ 3 / Others - Percentage of bandwidth reserved for each class. <p>Status - Click to bring up the Online Statistics page that shows snapshots of statistics for the given WAN interface.</p>
Class Rule	<p>Define and list the Class rules.</p> <p>Index - Displays the class number that you can edit.</p> <p>Enable - Displays the status of this class rule.</p> <p>QoS Class - Displays the QoS class level.</p> <p>Local Address - Displays the local IP address for the rule.</p>

Item	Description
	<p>Remote Address - Displays the remote IP address for the rule.</p> <p>DSCP - Displays the levels of the data for processing with QoS control.</p> <p>Service Type - Displays detailed settings for the service type.</p> <p>Add - Click it to create a class rule for QoS.</p>
VoIP Prioritization	<p>Enable the First Priority for VoIP SIP/RTP - Select to allow VoIP traffic to receive the highest priority.</p> <p>SIP UDP Port - Port number to be monitored for SIP traffic.</p> <p> - Click this icon to display the VoIP QoS Status.</p>
Tag Outbound Traffic	<p>Tag the outgoing traffic with the DSCP or Precedence value.</p> <p>Add DSCP or Precedence Value for Class 1 to Class 3 - Check to apply the DSCP or precedence value for each class.</p>

To save changes, click **OK**; to discard changes, click **Cancel**.

Online Statistics

Click the **Status** link in the **General Setup** section to show real-time online statistics of the WAN interface.

Bandwidth Management >> Quality of Service

General Setup for WAN Interface

Click WAN interface number link to configure the limited bandwidth ratio for QoS of the WAN interface.

Bandwidth Management >> Quality of Service >> WAN1

Enable UDP Bandwidth Control
Limited_bandwidth Ratio %

Outbound TCP ACK Prioritize

Available settings are explained as follows:

Item	Description
Enable UDP Bandwidth Control	Select to restrict the bandwidth available to UDP traffic. The Limited_bandwidth Ratio value is the maximum percentage of bandwidth that can be used by UDP traffic. <ul style="list-style-type: none">● Limited_bandwidth Ratio - Enter a percentage value.
Outbound TCP ACK Prioritize	Select to give outbound ACK packets priority over other packets to ensure traffic is not slowed down because the remote host is waiting for ACK packets before further traffic will be sent.

Info

The rate of outbound/inbound must be smaller than the real bandwidth to ensure correct calculation of QoS. It is suggested to set the bandwidth value for inbound/outbound as 80% - 85% of physical network speed provided by ISP to maximize the QoS performance.

Add / edit a Class Rule for QoS

You can set up to 20 rules for one Class. If you want to edit an existed rule, please select the radio button of that one and click Edit to open the rule edit page for modification.

1. To add a rule, click **Add** to bring up the configuration page. To edit an existing rule, select the rule by clicking the radio button in front of the rule, and then click **Edit** to bring up the configuration page.

Bandwidth Management >> Quality of Service

Available settings are explained as follows:

Item	Description
Common Settings	
Enable this account	Select to enable this user profile.
Username	Login name (e.g., LAN_User_Group_1, WLAN_User_Group_A, WLAN_User_Group_B, etc.) for this user profile. Maximum length is 24 characters.
Password	Password (e.g., lug123, wug123, wug456, etc.) for this user profile. Maximum length is 24 characters. When a user tries to access the Internet and User Management is enabled, he or she must supply a valid user name and password combination for authentication. The profile with matching user name and password will be applied to the session.
Confirm Password	Enter the password again for confirmation.
External Server Authentication	The router will authenticate dial-in users using either a built-in (None) or external service (LDAP, Radius or TACACS+). The Password setting is ignored when an external authentication service is used.
Login Settings	
Allow Authentication via	The authentication methods allowed for this user.

	<p>Web - If selected, user will need to authenticate by entering a username and password when attempting to access an external website for the first time. The user will be redirected to the external website after a successful authentication.</p> <p>Alert Tool - If selected, the user can enter the user name and password into the DrayTek Alert Tool. A window with remaining time of connection for such user will be displayed. The Alter Tool can be downloaded from the DrayTek website.</p> <p>Telnet - If selected, the user can authenticate by logging in to the router using telnet.</p>
Show Landing Page After Login	<p>When a user tries to access into the web user interface of Vigor router series with the user name and password specified in this profile, he/she will be lead into the web page configured in Landing Page field in User Management>>General Setup.</p> <p>Check this box to enable such function.</p>
Idle Timeout	<p>If there is no WAN traffic to and from the LAN client for the specified amount of time (in minutes), the WAN session is reset and the user will need to re-authenticate before Internet access is once again allowed. The default Idle Timeout value is 10 minutes.</p>
Auto Logout After	<p>Such account will be forced to logout after a certain time set here.</p>
Pop up Time-Tracking Window	<p>If enabled, a browser window will pop up showing the session time remaining. However, the system will update the time periodically to keep the connection always on. Thus, Idle Timeout will not interrupt the network connection.</p>
Login Permission Schedule	<p>You can enter four sets of time schedule for your request. All the schedules can be set previously in Applications >> Schedule web page and you can use the number that you have set in that web page.</p>
Policy	
Max. Login Devices	<p>The maximum number of concurrent logins allowed for this profile. The default setting is 0 which means no limit.</p>
Enable Time Quota	<p>If selected, the user is allowed Internet access for the specified amount of time after a successful authentication. The first value is the remaining time of the current login session, whereas the second value is the value to increment or decrement from the remaining time quota by clicking + /- buttons. Both values are in minutes.</p> <p>Click + / - to increase / decrease the time quota for such profile.</p> <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p>Note: A dialog will be popped up showing the remaining time remained when the user after the user has successfully authenticated.</p>  </div>

	When the time is up, all Internet connections are terminated.
Enable Data Quota	<p>If selected, the user is allowed to use the specified amount of data after a successful authentication.</p> <p>The first value is the remaining data quota of the current login session, whereas the second value is the value to increment or decrement from the remaining data quota by clicking +/- buttons. The unit for both values can be set to either MB (megabytes) or GB (gigabytes) using the MB/GB dropdown box.</p> <p>Click + / - to increase / decrease the data quota for such profile.</p>
Reset quota automatically	<p>Select to enable this option.</p> <p>Reset the time and data quotas to the preset default values when a time schedule ends.</p> <p>Time Limit - Enter value for default time quota.</p> <p>Data Limit - Enter value for default data quota.</p> <p>Login Permission Schedule Ends - When the scheduling time is up, the router will reset the quota with user-defined time/data values automatically.</p> <p>Schedule - Specify a time schedule index number for this profile.</p>
Other Services	
Log	<p>Activities of the user can be recorded by Syslog.</p> <p>None - Logging is disabled.</p> <p>Login - Login and logout activities are logged.</p> <p>Event - Allowed and blocked traffic are logged.</p> <p>All - Both Login and Event types are logged.</p>
Allow this profile to be used by	<p>This option is available for profiles with index number 3 to 200.</p> <p>Internal RADIUS- Check the box to enable security authenticated via internal RADIUS server.</p> <p>Local 802.1X - Check the box to enable security authenticated via internal 802.1X server.</p>

Click **OK** to save changes, **Clear** to restore settings to factory defaults, or **Cancel** to discard changes. Click **Refresh** to reload the page with the most recent data usage information (data and time quotas).

VI-3-3 User Group

This page allows you to place multiple user profiles into groups. These groups can be used to set up filter rules in Firewall>>General Setup.

User Management >> User Group

- 4-marketing

>>

<<

Selected User Objects (Up to 32)

-

Available settings are explained as follows:

Item	Description
Name	Name that identifies this user group.
Available User Objects	Shows a list of User Objects that have not been placed into the current group.

Last Login Time	The most recent login time of the user.
Expired Time	The expiration time of the current login session.
Data Quota	Display the quota for data transmission. The remaining data quota of this login session.
Idle Time	Amount of time the session has been idled.
Action	Block - Stops user from accessing the Internet. Unblock -Resumes Internet access of a blocked user. Logout - Terminates the current login session. Delete - Removes the user entry from the User Online Status page.

Application Notes

A-1 How to authenticate clients via User Management

Before using the function of User Management, please make sure **User-Based** has been selected as the **Mode** in the **User Management>>General Setup** page.

User Management >> General Setup

General Setup

Mode Selection:

- Rule-Based** is a management method based on IP address. Administrator may set different firewall rules to different IP address.
- User-Based** is a management method based on user profiles. Administrator may set different firewall rules to different user profiles.

Notice for User-Based mode:

- In User-Based mode, **Active Rules** in Firewall will be applied to all LAN clients, packets that matches the Active Rules will be blocked or pass immediately, no user authentication is required.
- Only **Inactive Rules** in Firewall can be set for individual user profile. In User-Based mode, packets that do not match Active Rules will need authentication, and the Inactive Rule applied to the specific user profile will then take effect.

With **User Management** authentication function, before a valid username and password have been correctly supplied, a particular client will not be allowed to access Internet through the router. There are three ways for authentication: **Web**, **Telnet** and **Alert Tool**.

Authentication via Web

- If a LAN client who hasn't passed the authentication opens an external web site in his browser, he will be redirected to the router's Web authentication interface first. Then, the client is trying to access <http://www.draytek.com> and but brought to the Vigor router. Since this is an SSL connection, some web browsers will display warning messages.

- With Microsoft Internet Explorer, you may get the following warning message. Please press **Continue to this website (not recommended)**.

- With Mozilla Firefox, you may get the following warning message. Select **I Understand the Risks**.

- With Chrome browser, you may get the following warning. Click Proceed anyway.

After that, the web authentication window will appear. Input the user name and the password for your account (defined in User Management) and click Login.

If the authentication is successful, the client will be redirected to the original web site that he tried to access. In this example, it is <http://www.draytek.com>. Furthermore, you will get a popped up window as the following. Then you can access the Internet.

Note, if you block the web browser to pop up any window, you will not see such window. If the authentication is failed, you will get the error message, **The username or password you entered is incorrect. Please login again.**

- In above description, you access an external web site to trigger the authentication. You may also directly access the router's Web UI for authentication. Both HTTP and HTTPS are supported, for example `http://192.168.1.1` or `https://192.168.1.1`. Replace 192.168.1.1 with your router's real IP address, and add the port number if the default management port has been modified.

If the authentication is successful, you will get the **Welcome Message** that is set in the **User Management >> General Setup** page.

General Setup

Mode Selection:

Rule-Based is a management method based on IP address. Administrator may set different firewall rules to different IP address.

User-Based is a management method based on user profiles. Administrator may set different firewall rules to different user profiles.

Notice for User-Based mode:

- In User-Based mode, **Active Rules** in Firewall will be applied to all LAN clients, packets that matches the Active Rules will be blocked or pass immediately, no user authentication is required.
- Only **Inactive Rules** in Firewall can be set for individual user profile. In User-Based mode, packets that do not match Active Rules will need authentication, and the Inactive Rule applied to the specific user profile will then take effect.

Authentication page:

Web Authentication: HTTPS HTTP

Login Page Greeting

Display IP address on the dialog box pops up after successful login.

Landing page:

(Max 255 characters) [Preview](#) [Set to Factory Default](#)

```
<body stats=1><script language='javascript'>
window.location='http://www.draytek.com'</script></body>
```

OK Clear Cancel

With the default setup `<body stats=1><script language='javascript'>window.location='http://www.draytek.com'</script></body>`, you will be redirected to `http://www.draytek.com`. You may change it if you want. For example, you will get the following welcome message if you enter **Login Successful** in the **Welcome Message** table.

Also you will get a Tracking Window if you don't block the pop-up window.

- Don't setup a user profile in User Management and a VPN Remote Dial-in user profile with the same Username. Otherwise, you may get unexpected result. It is because the VPN Remote Dial-in User profiles can be extended to the User profiles in User Management for authentication.

There are two different behaviors when a User Management account and a VPN profile share the same Username:

- If **SSL Tunnel** or **SSL Web Proxy** is enabled in the VPN profile, the user profile in User Management will always be invalid for Web authentication. For example, if you create a user profile in User Management with **chaochen/test** as username/password, while a VPN Remote Dial-in user profile with the same username "chaochen" but a different password "1234", you will always get error message **The username or password you entered is incorrect** when you use **chaochen/test** via Web to do authentication.

VPN and Remote Access >> Remote Dial-in User

Index No. 1

User account and Authentication <input type="checkbox"/> Enable this account Idle Timeout <input type="text" value="300"/> second(s)	Username <input type="text" value="???"/> Password <input type="text" value="Max: 19 characters"/> <input type="checkbox"/> Enable Mobile One-Time Passwords(mOTP) PIN Code <input type="text"/> Secret <input type="text"/>

<input type="checkbox"/> Specify Remote Node Remote Client IP <input type="text"/> or Peer ID <input type="text"/> Netbios Naming Packet <input checked="" type="radio"/> Pass <input type="radio"/> Block Multicast via VPN <input type="radio"/> Pass <input checked="" type="radio"/> Block (for some IGMP,IP-Camera,DHCP Relay..etc.)	IPsec Security Method <input checked="" type="checkbox"/> Medium(AH) High(ESP) <input checked="" type="checkbox"/> DES <input checked="" type="checkbox"/> 3DES <input checked="" type="checkbox"/> AES Local ID (optional) <input type="text"/>
Subnet <input type="text" value="LAN 1"/> <input type="checkbox"/> Assign Static IP Address <input type="text" value="0.0.0.0"/>	

- If **SSL Tunnel** or **SSL Web Proxy** is disabled in the VPN profile, a User Management account and a remote dial-in VPN profile can use the same Username, even with different passwords. However, we recommend you to use different usernames for different user profiles in User Management and VPN profiles.

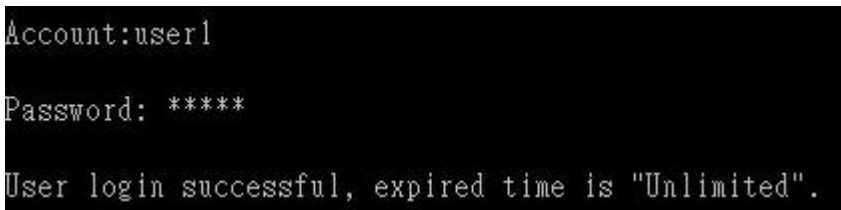

Authentication via Telnet

The LAN clients can also authenticate their accounts via telnet.

1. Telnet to the router's LAN IP address and input the account name for the authentication:

2. Enter the password for authentication and press Enter. The message User login successful will be displayed with the expired time (if configured).

Info

Here expired time is "Unlimited" means the Time Quota function is not enabled for this account. After login, this account will not be expired until it is logout.

3. In the Web interface of router, the configuration page of Time Quota is shown as below.

User login successful, expired time is "12-23 10:21:33".
```

After you run out the available time, you can't use this account any more until the administrator manually adds additional time for you.

A-2 How to use Landing Page Feature

Landing Page is a special feature configured under User Management. It can specify the message, content to be seen or specify which website to be accessed into when users try to access into the Internet by passing the authentication. Here, we take Vigor2135 series router as an example.

Example 1 : Users can see the message for landing page after logging into Internet successfully

1. Open the web user interface of Vigor2135.
2. Open User Management -> General Setup to get the following page. In the field of Landing Page, please Enter the words of "Login Success". Please note that the maximum number of characters to be typed here is 255.
3. Now you can enable the Landing Page function. Open User Management -> User Profile and click one of the index number (e.g., index number 3) links.

User Management >> User Profile

User Profile Table

Profile	Enable	Name	Profile Index
1.	<input checked="" type="checkbox"/>	admin	17.
2.	<input checked="" type="checkbox"/>	Dial-In User	18.
3.	<input type="checkbox"/>		19.

4. In the following page, check the box of Landing page and click OK to save the settings.

- Click **Login**. If the logging is successful, you will be directed into the website of www.draytek.com.

VI-4 Hotspot Web Portal

The Hotspot Web Portal feature allows you to set up profiles so that LAN users could either be redirected to specific URLs, or be shown messages when they first connect to the Internet through the router. Users could be required to read and agree to terms and conditions, or authenticate themselves, prior to gaining access to the Internet. Other potential uses include the serving of advertisements and promotional materials, and broadcast of public service announcements.

Web User Interface

LAN
Hotspot Web Portal
Profile Setup
Quota Management
Routing

VI-4-1 Profile Setup

Select **Profile Setup** to create or modify Portal profiles. Up to 4 profiles can be created to meet different requirements according to LAN subnets, WLAN SSIDs, origin and destination IP addresses, etc.

Hotspot Web Portal >> Profile Setup ?

Hotspot Web Portal Profile:

Index	Enable	Comments	Login Mode	Applied Interface	
1.	<input type="checkbox"/>		Click-through	None	Preview
2.	<input type="checkbox"/>		Click-through	None	Preview
3.	<input type="checkbox"/>		Click-through	None	Preview
4.	<input type="checkbox"/>		Click-through	None	Preview

Note:

1. The router must connect to the Internet before webpage redirection will work.
2. If the LAN clients are using another DNS server on LAN, please make sure the DNS query for domain name "portal.draytek.com" will be resolved by the router.

OK

Backup up Profile 1 ▾ : Backup	Restore 選擇檔案 未選擇任何檔案 to Profile 1 ▾ : Restore
<input type="checkbox"/> Restore Quota Management Setting	

Available settings are explained as follows:

Item	Description
Index	Click the index number link to view or update the profile settings.
Enable	Check the box to enable the profile.
Comments	Shows the description of the profile.
Login Mode	Shows the login mode used by the profile. See the section

	<i>Login Mode</i> for details.
Applied Interface	Shows the interfaces to which this profile applies.
Preview	Click this button to preview the Hotspot Web Portal page that will be displayed to users.
Backup up	Profile list - Select a source profile. Backup - Click to save the configuration file based on the selected source profile.
Restore ...	Select - Click to choose a configuration file. to.. - Select a destination profile. It will be restored by the selected configuration file. Restore - Click to perform the restoration job. Restore Quota Management Setting - If selected, the quota management setting also will be restored onto the destination profile.

VI-4-1-1 Login Method

There are four login methods to choose from for authenticating network clients: **Skip Login**, **Click Through**, **Social Login**, **PIN Login**, and **Social or PIN Login**. Each login mode will present a different web page to users when they connect to the network.

(A) Skip Login, landing page only

This mode does not perform any authentication. The user will be redirected to the landing page. The user can then leave the landing page to visit other websites.

(B) Click-through

The following page will be shown to the users when they first attempt to access the Internet through the router. After clicking **Accept** on the page, users will be directed to the landing page (defined in Captive Portal URL) and be granted access to the Internet.

(C) Various Hotspot Login

An authentication page will appear when users attempt to access the Internet for the first time via the router. After authenticating themselves using a Facebook account, Google account, PIN code, password for RADIUS sever, they will be directed to the landing page and be granted access to the Internet.

(D) External Portal Server

External RADIUS server will authenticate the users when they attempt to access the Internet for the first time via the router.

VI-4-1-2 Steps for Configuring a Web Portal Profile

Welcome Message

Welcome!
Please log in to enjoy Wi-Fi.

(Max 1360 characters)

Privacy Policy & Terms and Conditions

Settings that are common to Facebook, Google, PIN, and RADIUS authentication are:

Item	Description
Welcome Message	Enter the text to be displayed as the welcome message.
Terms and Conditions Description	Enter the text to be displayed as the Terms and Conditions hyperlink text.
Terms and Conditions Content	Enter the text to be displayed in the Terms and Conditions pop-up window.

If you have selected Facebook login, the setting will appear:

Facebook Login Description

Log in with Facebook

(Max 170 characters)

Item	Description
------	-------------

Facebook Login Description	Enter the text to be displayed on the Facebook login button.
-----------------------------------	--

If you have selected Google login, the setting will appear:

Google Login Description	<input type="text" value="Log in with Google"/> (Max 170 characters) <input type="button" value="Default"/>
---------------------------------	--

Item	Description
Google Login Description	Enter the text to be displayed on the Google login button.

If you have selected PIN login, these settings will appear:

Hint Message for PIN	<input type="text" value="Log in with PIN code."/> (Max 170 characters) <input type="button" value="Default"/>
-----------------------------	---

Receiving PIN via SMS Description	<input type="text" value="Receive PIN via SMS"/> (Max 170 characters) <input type="button" value="Default"/>
--	---

Receiving PIN via SMS Content	<input type="text" value="Welcome to DrayTek Hotspot! Your PIN is <PIN>. This PIN is valid for 10 min."/> (Max 150 characters) <input type="button" value="Default"/>
--------------------------------------	--

Enter PIN Description	<input type="text" value="Enter Existing PIN"/> (Max 170 characters) <input type="button" value="Default"/>
------------------------------	--

Submit Button Description	<input type="text" value='Submit'/> (Max 170 characters) <input type="button" value="Default"/>
----------------------------------	--

Submit Button Color	<input type="button" value="Customize Color"/> <input type="text" value="A2A2A2"/> (format : FFFFFFFF) <input type="button" value="Preview"/> <input type="button" value="Default"/>
----------------------------	---

Item	Description
Hint Message for PIN	Enter the text used to suggest users to choose SMS authentication.
Receiving PIN via SMS Description	Enter the text to be displayed on the button that the user clicks to receive an SMS PIN.
Receiving PIN via SMS Content	Enter the message to be sent by SMS to inform the user of the PIN. The PIN variable is specified by <PIN> within the message.

Enter PIN Description	Enter message to be displayed in the PIN textbox to prompt the user to enter the PIN.
Submit Button Description	Enter the text to be displayed on the submit PIN button
Submit Button Color	Select the color of the submit button from the predefined color list, or select Customize Color and enter the RGB value. Click Preview to preview the selected color.

If you have selected RADIUS account login, these settings will appear:

Hint Message for RADIUS	<input type="text" value="Log in with your account."/> (Max 170 characters) <input type="button" value="Default"/>
RADIUS Account Description	<input type="text" value="Username"/> (Max 170 characters) <input type="button" value="Default"/>
RADIUS Password Description	<input type="text" value="Password"/> (Max 170 characters) <input type="button" value="Default"/>
Login Button Description	<input type="text" value='Login'/> (Max 170 characters) <input type="button" value="Default"/>
Login Button Color	<input type="button" value="Customize Color"/> <input type="text" value="A2A2A2"/> (format : FFFFFFFF) <input type="button" value="Preview"/> <input type="button" value="Default"/>

Item	Description
Hint Message for RADIUS	Enter the text used to prompt the user to login.
RADIUS Account Description	Enter the text to prompt the user to enter the username.
RADIUS Password Description	Enter the text to prompt the user to enter the password.
Login Button Description	Enter the text to be displayed on the login button.
Login Button Color	Select the color of the login button from the predefined color list, or select Customize Color and enter the RGB value. Click Preview to preview the selected color.

And finally, the save and cancel buttons are always displayed.

Item	Description
Save and Next	Click to save the configuration on this page and proceed to the

	next page.
Cancel	Click to abort the configuration process and return to the profile summary page.

2nd-stage Page for PIN Login

If you have selected PIN Login as the login method, you will also need to configure the page that is displayed to users when they request a PIN.

Hotspot Web Portal >> Profile Setup

Configure 2nd-stage Page for SMS Login

	<p>Back Button</p> <p>PIN Code Message</p> <p>Default Country, Enter Mobile Number Description</p> <p>Send Button Description and Color</p> <p>Send Succeeded Message</p> <p>Enter PIN and Submit Button</p>
Back Button Description	<input type="text" value="Back"/> <p>(Max 170 characters) <input type="button" value="Default"/></p>
PIN Code Message	<input type="text" value="PIN code will be sent over via SMS."/> <p>(Max 170 characters) <input type="button" value="Default"/></p>
Default Country Code	+ 93 Afghanistan
Enter Mobile Number Description	<input type="text" value="enter your mobile number"/> <p>(Max 170 characters) <input type="button" value="Default"/></p>
Send Button Description	<input type="text" value="Send PIN"/> <p>(Max 170 characters) <input type="button" value="Default"/></p>
Send Button Color	<p>Customize Color</p> <input type="text" value="A2A2A2"/> (format : FFFFFFFF) <input type="button" value="Preview"/> <input type="button" value="Default"/>
Send Succeeded Message	<input type="text" value="PIN Code has been sent.Click Send PIN again if not receiving PIN in 3 minutes."/> <p>(Max 170 characters) <input type="button" value="Default"/></p>
<input type="button" value="Save and Next"/> <input type="button" value="Cancel"/>	

Available settings are explained as follows:

Item	Description
------	-------------

Back Button Description	Enter text for the label of the hyperlink to return to the previous page.
PIN Code Message	Enter text to be displayed as the body text on the page.
Default Country Code	Select the default country code to be displayed using the dropdown menu.
Enter Mobile Number Description	Enter message to be displayed in the mobile number textbox to prompt the user to enter the mobile number.
Send Button Description	Enter the label text of the send button.
Send Button Color	Select the color of the send button from the predefined color list, or select Customize Color and enter the RGB value. Click Preview to preview the selected color.
Send Succeeded Message	Enter text to be displayed to notify the user after the PIN has been sent.
Save and Next	Click to save the configuration on this page and proceed to the next page.
Cancel	Click to abort the configuration process and return to the profile summary page.

4 Whitelist Setting

In this step you can configure the whitelist settings. Users are allowed to send and receive traffic that satisfies whitelist settings.

Hotspot Web Portal >> Profile Setup

NAT Rules	Dest Domain	Dest IP	Dest Port	Source IP
Always allow outbound connections from hosts in		<input type="checkbox"/> NAT >> Port Redirection <input type="checkbox"/> NAT >> Open Ports <input type="checkbox"/> NAT >> DMZ		

Save and Next Cancel

Available settings are explained as follows:

Item	Description
NAT Rules	To prevent web portal settings from conflicting with NAT rules resulting in unexpected behavior, select the NAT rules that are allowed to bypass the web portal. Hosts listed in selected NAT rules can always access the Internet without being intercepted by the web portal.
Dest Domain	Enter up to 30 destination domains that are allowed to be accessed.
Dest IP	Enter up to 30 destination IP addresses that are allowed to be accessed.
Dest Port	Enter up to 30 destination protocols and ports that are allowed through the router.
Source IP	Enter up to 30 source IP addresses that are allowed through the router.
Save and Next	Click to save the configuration on this page and proceed to the next page.
Cancel	Click to abort the configuration process and return to the profile summary page.

Bypass	1.Default	0d 5h 0m	Unlimited	Unlimited	Unlimited

Note:
To modify the quota settings, please go to [Hotspot Web Portal >> Quota Management](#)

JSON API

Enable JSON API
 Server URL
 Get JSON and Update user status every hours min
 Update information
 NAS-Identifier MAC Address All User Number Wi-Fi User Number

Web Portal Options

HTTPS Redirection Enable
 When an unauthenticated client opening a HTTPS page, redirect will work but certificate errors may be shown.
 Disable this function to redirect only HTTP pages. HTTPS browsing will timeout without redirection and also no certificate errors.

Captive Portal Detection Enable
 Trigger the unauthenticated client to automatically pop-up the Web Portal page when connects to Wi-Fi.
 This function is not available when using **Social Login** because the page may not be shown correctly due to the limitation of the OS built-in Captive Portal Detection.

Bypass Enable
 If the number of https sessions exceed the default limit, web portal would temporarily bypass them without authenticate.
 Those users would be redirected to web portal and authenticate later.

Landing Page After Authentication

Fixed URL
 User Requested URL
 Bulletin Message

 (Max 511 characters) Default Message

Note:
Landing Page may not be shown correctly when using OS built-in Captive Portal Detection.

Applied Interfaces

Subnet		<input type="checkbox"/> LAN1 <input type="checkbox"/> LAN2 <input type="checkbox"/> LAN3 <input type="checkbox"/> LAN4
WLAN	2.4G	<input type="checkbox"/> SSID1 (DrayTek) <input type="checkbox"/> SSID2 (DrayTek_Guest) <input type="checkbox"/> SSID3 <input type="checkbox"/> SSID4
	5G	<input type="checkbox"/> SSID1 (DrayTek_5G) <input type="checkbox"/> SSID2 (DrayTek_5G_Guest) <input type="checkbox"/> SSID3 <input type="checkbox"/> SSID4

Available settings are explained as follows:

Item	Description
Quota Management	
Quota Policy Profile	Choose a policy profile to apply to web portal clients.
JSON API	
Enable JSON API	Select to enable the function. Server URL - Enter the URL of the server.
Web Portal Options	
HTTPS Redirection	If this option is selected, unauthenticated clients accessing HTTPS websites will be redirected to the login page, but the browser may alert the user of certificate errors. If this option is not selected, attempts to access to HTTPS website will time out without redirection.
Captive Portal Detection	If this option is selected, the web portal page is triggered automatically when an unauthenticated client tries to access the Internet. This function is not available when the Login Mode is Social Login , as the web portal page may not be shown correctly due to the limitations of the operating system's built-in Captive Portal Detection.
Bypass	If this option is selected, the web portal page would temporarily bypass without authentication when the number of HTTPS sessions exceed the default limit.
Landing Page After Authentication	
Fixed URL	Specifies the webpage that will be displayed after the user has successfully authenticated. The user will be redirected to the specified URL. This could be used for displaying advertisements to users, such as guests requesting wireless Internet access in a hotel.
User Requested URL	The user will be redirected to the URL they initially requested.
Bulletin Message	The message configured here will be briefly shown for a few seconds to the user. Default Message - This button is enabled when Bulletin Message is selected. Click to load the default text into the bulletin message textbox.
Applied Interfaces	
Subnet	The current Hotspot Web Portal profile will be in effect for the selected subnets.
WLAN	The current Hotspot Web Portal profile will be in effect for the selected WLAN SSIDs.
Finish	Click to complete the configuration.
Cancel	Click to abort the configuration process and return to the profile summary page.

VI-4-2 Quota Management

The system administrator can specify bandwidth and sessions quota which is only applicable to the web portal clients.

Settings configured in Quota Management will override the policies set in **Bandwidth Management>>Bandwidth Limit** and **Bandwidth Management>>Limit**.

Hotspot Web Portal >> Quota Management

Web Portal Bandwidth and Session Limit

The settings here will apply only to the web portal clients and will override the policies set in Bandwidth Management.

Bandwidth Limit

Session Limit

Quota Policy Profile

Index	Name	Expired Time after First Login	Device Allowed per Account	Reconnection Time Restriction	Bandwidth Limit	Session Limit
1	Default	0d 5h 0m	Unlimited	Unlimited	Unlimited	Unlimited
<input type="button" value="Add"/> (up to 20)						

Available settings are explained as follows:

Item	Description
Bandwidth Limit	Check the box to override the policy configured in Bandwidth Management>>Bandwidth Limit .
Session Limit	Check the box to override the policy configured in Bandwidth Management>>Session Limit .
Quota Policy Profile	Add - Create up to 20 policy profiles in such page.

To create a new quotal policy profile, click **Add** to open the following page.

Profile Name

Account Validity

Expired Time After the First Login days hours min

Idle Timeout min

Device Control

Devices Allowed per account

Reconnection Time Restriction At : everyday
 Block the same user from reconnecting before the set time

hours min
 Block the same user from reconnecting for the set period

Bandwidth and Session Limit

Bandwidth Limit

Download Limit Kbps Mbps

Upload Limit Kbps Mbps

Session Limit sessions

Available settings are explained as follows:

Item	Description
Profile Name	Enter a name for a new profile.
Account Validity	Set the duration for which the login is valid. Expired Time After the First Login - Sets the days, hours, and minutes. After the login has expired, Vigor router will block the client from accessing the network/Internet. Idle Timeout - When this option is selected, Vigor router will terminate the network connection if there is no activity from the user after the specified idle time has passed.
Device Control	Set the maximum number of devices that can be connected for each account, and the time restriction for the client accessing Internet via the web portal. Devices Allowed per account - Use the drop-down list to select the maximum number of devices that can be connected to the network using the same account. Reconnection Time Restriction - Blocks the account from being used to connect devices to the network in one of two ways: <ul style="list-style-type: none"> ● At ... Everyday - After the login expires, the account cannot be used to connect devices to the network until the set time of day. ● Hours.. min - After the login expires, the account cannot be used to connect devices to the network for a set period of time.
Bandwidth and Session Limit	Bandwidth Limit - Check the box to configure bandwidth limit for web portal client.

-
- | | |
|--|---|
| | <ul style="list-style-type: none">● Download/Upload Limits - Set the maximum upload and download speeds. <p>Session Limit- Check the box to configure a maximum session limit for web portal clients.</p> |
|--|---|
-

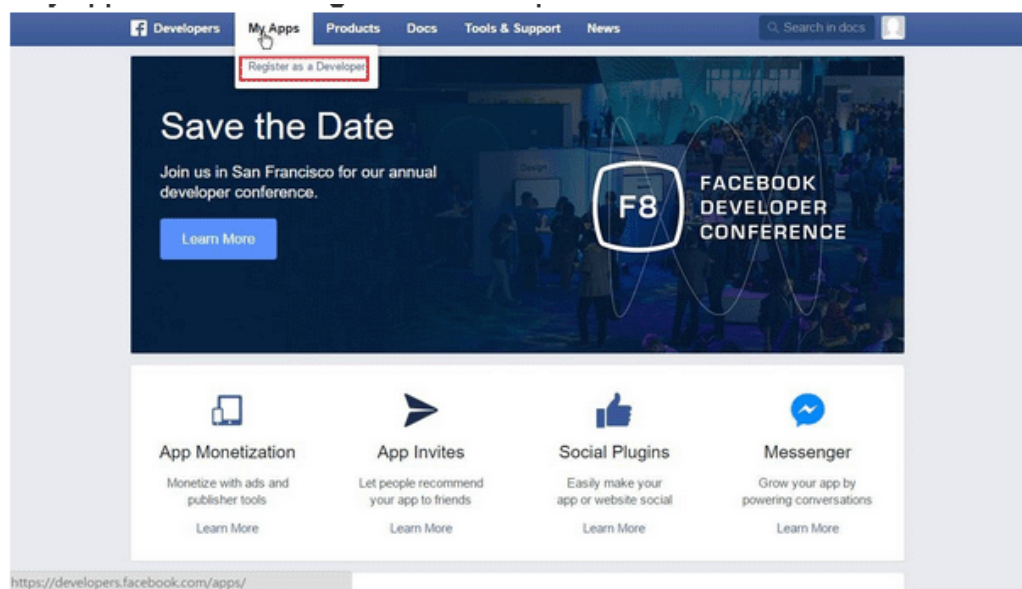

After finishing all the settings here, please click **OK** to save the configuration.

Application Notes

A-1 How to create Facebook APP for Web Portal Authentication?

The new web portal feature support social login as authentication method, and allows network administrator to authenticate LAN clients by their Google or Facebook account. This document introduces how to create Facebook APP, and generate the APP ID and APP secret that can be used in Web Portal setup.

1. Register as FB Developer: Go to <https://developers.facebook.com/> and login the FB account.
2. Register the Facebook account as a Developer (If the account has been verified previously, this step can be skipped.)
3. Click My Apps then choose Register as Developer.

4. Switch to YES then click Next on pop-up window.

5. Choose country then type phone number, click Send as Text in Get Confirmation Code. Wait confirmation code message received then enter the confirmation code. Click Register to finish the register process.

Register as a Facebook Developer ✕

We need to verify your account to complete your registration. Your Phone number will be added to your timeline but won't be visible to your friends.

Country: Taiwan (+886) Phone number: 0912345678

Get Confirmation Code

Send as Text Send via Phone Call

Confirmation code: 625535

You can also verify your account by adding a credit card. [?]

Go Back Register

6. Add a New App. Click on My Apps > Add a New App. Choose Website platform.

7. Click Skip and Create App ID on first use. Type Display Name. Choose Category. Click Create App ID.

8. Pops up security check window, select the answer, and then click Submit to finish the process.

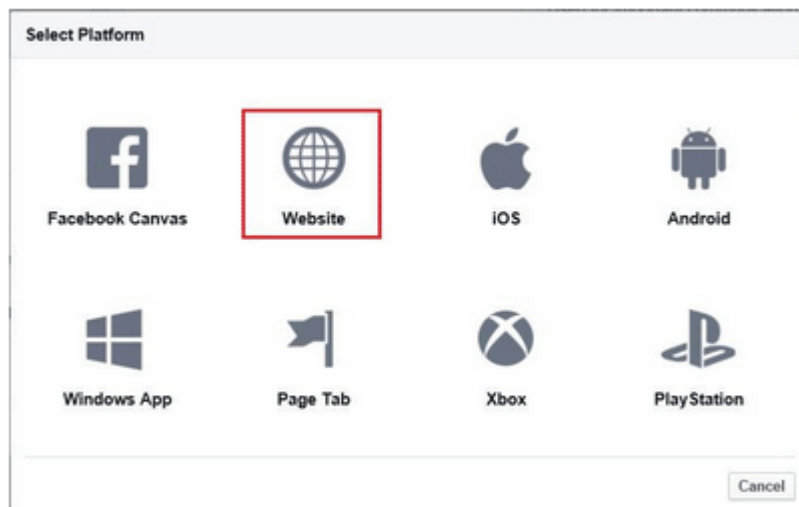

- On Dashboard, user can get **App ID** and **App Secret**, these information will be used in Vigor Router's Web Portal Setup.

- Add Platform on My Apps. Go to Settings then click **Add Platform**.

- Choose **Website** in Select Platform window.

- Enter the Site URL as <http://portal.draytek.com>. (Note: If you change http port in the vigor, please add http port in URLs. For example, we use 8080 as http port and we'll put <http://portal.draytek.com:8080>). Enter the Contact Email. And click Save Change.

13. Set up Client OAuth. Go to Settings >> Advanced >> Client OAuth Settings, enter "http://portal.draytek.com" in Valid OAuth redirect URIs, and save changes.

14. Go to My Apps >> Status & Review, and switch available status to YES to activate the APP.

Facebook Developers navigation bar: Developers | My Apps | Products | Docs | Tools & Support | News | Search in docs

Left sidebar (draytektest):

- Dashboard
- Settings
- Status & Review**
- App Details
- Roles
- Open Graph
- Alerts
- Localize

LOGIN PERMISSIONS

A-2 How to create Google APP for Web Portal Authentication?

The new web portal feature support social login as authentication method, and allows network administrator to authenticate LAN clients by their Google or Facebook account. This document introduces how to create Facebook APP, and generate the APP ID and APP secret that can be used in Web Portal setup.

1. Create Developer project. Go to <https://code.google.com/apis/console>, login with a Google account then click Create project. Type project name then click Create.

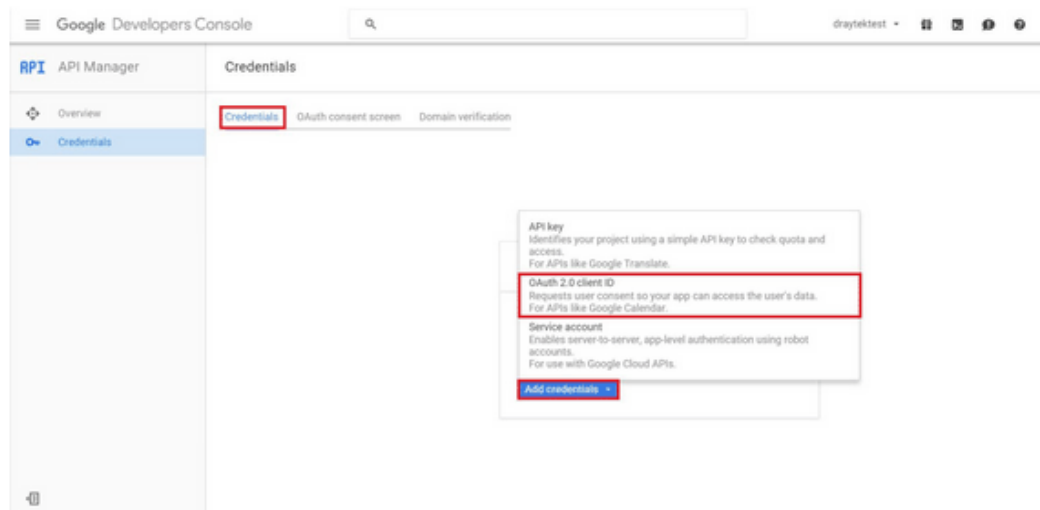

2. On Dashboard, choose Use Google APIs.

3. Edit Auth Consent screen. Go to **Credentials > Auth consent screen**. Enter your email, product name and other optional item then click on Save.

4. Create Client ID. Click Credentials and Click Add credentials > OAuth2.0 client ID.

5. Choose Web application as Application Type, then enter name. Set Authorized JavaScript origins and Authorized redirect URLs as http://portal.draytek.com, and click Create. (Note: If you change http port in the vigor, please add http port in URLs. For example, we use 8080 as http port and we'll put http://portal.draytek.com:8080).
6. Get client ID and client secret. Such information will be used in Vigor Router's Web Portal Setup page.

VI-5 Central Management (AP)

Vigor2135 can manage the access points supporting AP management via Central AP Management.

AP Map

AP Map is helpful to determine the best location for VigorAP in a room. A floor plan of a room is required to be uploaded first. By dragging and dropping available VigorAP icon from the list to the floor plan, the placement with the best wireless coverage will be clearly indicated through simulated signal strength

AP Maintenance

Vigor router can execute configuration backup, configuration restoration, firmware upgrade and remote reboot for the APs managed by the router. It is very convenient for the administrator to process maintenance without accessing into the web user interface of the access point.

Load Balance for AP

The parameters configured for Load Balance can help to distribute the traffic for all of the access points registered to Vigor router. Thus, the bandwidth will not be occupied by certain access points.

AP Load Balance (Traffic overload)

 External Devices

VI-6-1 Status

This page displays current status (online, offline or SSID hidden, IP address, encryption, channel, version, password and etc.) of the access points managed by Vigor router. Please open Central AP Management>>Function Support List to check what AP Models are supported.

Central Management >> AP >> Status

[Clear](#) | [Refresh](#)

Index	Device Name	IP Address	SSID	Ch.	STA List	AP List	Uptime	Ver.	Password
1	MK-AP 902	192.168.1.220	 DrayTek-LAN-A  DrayTek5G-LAN-A	11 36	0/64 0/64	0 0	0d 00:07	1.2.7	<input type="text" value="Password"/> <input type="button" value="x"/>

Note:

 : Online
  : Offline
  : Hidden SSID

Maximum support 20 APs.

When AP Devices connect via an intermediary switch, please ensure that UDP:4944 port and the HTTP port of AP Devices are not blocked so that the AP status can be retrieved.

Available settings are explained as follows:

Item	Description
Index	Click the index number link for viewing the settings summary of the access point.
Device Name	The name of the AP managed by Vigor router will be displayed here.
IP Address	Display the true IP address of the access point.
SSID	Display the SSID configured for the access point(s) connected to Vigor2135.
Ch.	Display the channel used by the access point.
STA List	Display the number of wireless clients (stations) connecting to the access point. In which, 0/64 means that up to 64 clients are allowed to connect to the access point. But, now no one connects to the access point. The number displayed on the left side means 2.4GHz; and the number displayed on the right side means 5GHz.

AP List	Display the number of the AP around the device.
Uptime	Display the duration of the AP powered up.
Version	Display the firmware version used by the access point.
Password	Vigor2135 can get related information of the access point by accessing into the web user interface of the access point. This button is used to modify the logging password of the connected access point.

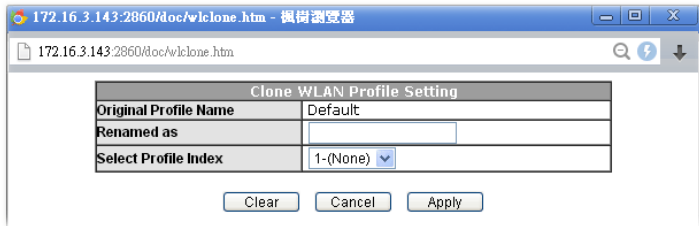

VI-6-2 WLAN Profile

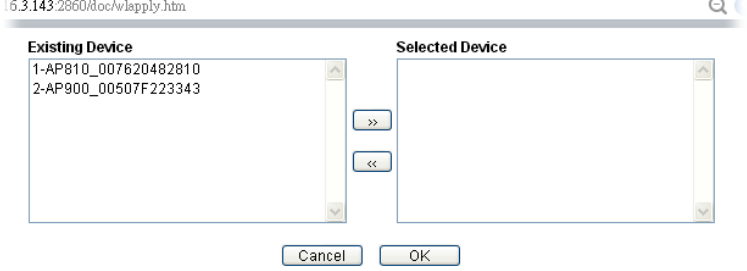

WLAN profile is used to apply to a selected access point. It is very convenient for the administrator to configure the setting for access point without opening the web user interface of the access point.

Central Management >> AP >> WLAN Profile

Profile	Name	Main SSID	Security	Multi-SSID	WLAN ACL	Rate Ctrl	Clone	To AP	To Local
1	Default	DrayTek-LAN-A	WPA+WPA2/PSK	Enable	None	None			
2	---	---	---	---	---	---	---	---	---

Click the number link of the selected profile to modify the content of the profile. Available settings are explained as follows:

Item	Description
Profile	There are five WLAN profiles offered to be configured. Simply click the index number link to open the modification page.
Name	Display the name of the profile. The default profile cannot be renamed.
Main SSID	Display the SSID configured by such wireless profile.
Security	Display the security mode selected by such wireless profile.
Multi-SSID	Enable means multiple SSIDs (more than one) are active. Disable means only SSID1 is active.
WLAN ACL	Display the name of the access control list.
Rate Ctrl	Display the upload and/or download transmission rate.
Clone	<p>It can copy settings from an existing WLAN profile to another WLAN profile.</p> <p>First, you have to check the box of the existing profile as the original profile. Second, click Clone. The following dialog will appear.</p>  <p>Third, choose the profile index to accept the settings from the original profile. Forth, type a new name in the field of Renamed as. Last, click Apply to save the settings on this dialog.</p> <p>The new profile has been created with the settings coming from the original profile.</p>
To AP	Click it to apply the selected wireless profile to the specified Access Point.

	 <p>Simply choose the device you want from Existing Device field. Click >> to move the device to Selected Device field. Then, click OK.</p> <p>The selected WLAN profile will be applied to the selected access point immediately. Later the access point will reboot.</p>
<p>To Local</p>	<p>WLAN Profile configured in this page is specified for VigorAP connected to Vigor router.</p> <p>If required, these settings also can be applied to Vigor router. Select and check one of wireless profiles and click this button to apply the settings onto the WI-Fi wireless settings configured for such Vigor router.</p>

How to edit the wireless LAN profile?

1. Select the WLAN profile (index number 1 to 5) you want to edit.
2. Click the index number link to display the following page.

Central Management >> AP >> WLAN Profile

2	123	DrayTek	Disable	Disable	None	None				

VI-6-3 AP Maintenance

Vigor router can execute configuration backup, configuration restoration, firmware upgrade and remote reboot for the APs managed by the router. It is very convenient for the administrator to process maintenance without accessing into the web user interface of the access point.

Info

Config Backup can be performed to one AP at one time. Others functions (e.g., Config Restore, Firmware Upgrade, Remote Reboot can be performed to more than one AP at one time by using Vigor2135.

Central Management >> AP >> AP Maintenance

AP Maintenance

Select Action

Action Type:

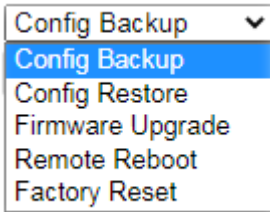

File/Path: 未選擇任何檔案

Select Device

Existing Device

Selected Device

Available settings are explained as follows:

Item	Description
Action	<p>There are four actions provided by Vigor router to manage the access points.</p>  <p>Vigor router can backup the configuration of the selected AP, restore the configuration for the selected AP, perform the firmware upgrade of the selected AP, reboot the selected AP remotely and perform the factory reset for the selected AP.</p>
File/Path	Specify the file and the path which will be used to perform Config Restore or Firmware Upgrade.
Select Device	Display all the available access points managed by Vigor router. Simply click << or >> to move the device(s) between

	Select Device and Selected Device areas.
Selected Device	Display the access points that will be applied by such function after clicking OK.

After finishing all the settings here, please click **OK** to perform the action.

VI-6-4 Traffic Graph

Click **Traffic Graph** to open the web page. Choose one of the managed Access Points, LAN-A, daily or weekly for viewing data transmission chart. Click **Refresh** to renew the graph at any time.

Central Management >> AP >> Traffic Graph

Enable

Show Chart: MK-AP 902 ▾ LAN-A ▾ Daily ▾

Refresh Min(s): 1 ▾

| [Refresh](#) |

Note:

Enabling/Disabling AP Traffic Graph will also Enable/Disable the External Devices Function.

The horizontal axis represents time; the vertical axis represents the transmission rate (in kbps).

Info

Enabling/Disabling such function will also enable/disable the External Devices function.

VI-6-5 Load Balance

The parameters configured for Load Balance can help to distribute the traffic for all of the access points registered to Vigor router. Thus, the bandwidth will not be occupied by certain access points.

Central Management >> AP >> Load Balance

AP Load Balance By Station Number or Traffic ▼

Station Number Threshold

Wireless LAN (2.4GHz) (3-128)
 Wireless LAN (5GHz) (3-128)
 Wireless LAN (5GHz-2) (3-128)

Traffic Threshold

Upload Limit bps (Default unit: K)
 Download Limit bps (Default unit: K)

Action When Threshold Exceeded

Stop accepting new connections
 Dissociate existing station by longest idle time
 Dissociate existing station by worst signal strength if it is less than dBm (%)

Choose to Apply

▼

Note: The maximum station number of Wireless LAN (2.4GHz) will be applied to both Wireless LAN (2.4GHz) and Wireless LAN (5GHz) if the firmware version of AP900 is less than or equal to 1.1.4.1.

Available settings are explained as follows:

Item	Description
AP Load Balance	It is used to determine the operation mode when the system detects overload between access points. Disable - Disable the function of AP load balance. By Station Number -The operation of load balance will be executed based on the station number configured in this page. It is used to limit the allowed number for the station connecting to the access point. The purpose is to prevent lots of stations connecting to access point at the same time and causing traffic unbalanced. Please define the required station number for WLAN (2.4GHz) and WLAN (5GHz) separately. By Traffic - The operation of load balance will be executed according to the traffic configuration in this page. By Station Number or Traffic - The operation of load balance will be executed based on the station number or the traffic configuration.
Station Number Threshold	Set the number of stations as a threshold to activate AP load balance.
Traffic Threshold	Upload Limit -Use the drop down list to specify the traffic

	<p>limit for uploading.</p> <p>Download Limit - Use the drop down list to specify the traffic limit for downloading.</p>
Action When Threshold Exceeded	<p>Stop accepting new connections - When the number of stations or the traffic reaches the threshold defined in this web page, Vigor router will stop any new connection asked by other access point.</p> <p>Dissociate existing station by longest idel time - When the access point is overload (e.g., reaching the limit of station number or limit of network traffic), it will terminate the network connection of the client's station which is idle for a longest time.</p> <p>Dissociate existing station by worst signal strength if it is less than - When the access point is overload (e.g., reaching the limit of station number or limit of network traffic), it will terminate the network connection of the client's station with the weakest signal.</p>
Choose to Apply	<p>Determine which AP shall be applied with the load balance.</p> <p>All APs - All APs shall be applied with the load balance.</p> <p>Specific APs - The function of load balance will be applied to the AP specified in this field.</p>

After finishing all the settings here, please click **OK** to save the configuration.

VI-6 Central Management (External Devices)

Vigor router can be used to connect with many types of external devices. In order to control or manage the external devices conveniently, open **External Devices** to make detailed configuration.

Central Management >> External Device

- External Device Syslog
- External Device Auto Discovery

External Devices Connected

| [Refresh](#) |

Below shows available devices that connected externally:

For security reason:

If you have changed the administrator password on External Device, please click the **Account** button to retype new username and password. Otherwise, the router will be unable to monitor the External Device device properly. Click the **Clear** button to Clear the off-line information and account information.

OK

Available settings are explained as follows:

Item	Description
External Device Syslog	Check this box to display information of the detected device on Syslog.
External Device Auto Discovery	Check this box to detect the external device automatically and display on this page.

From this web page, check the box of **External Device Auto Discovery** and click **OK**. Later, all the available devices will be displayed in this page with icons and corresponding information. You can change the device name if required or remove the information for off-line device whenever you want.

When you finished the configuration, click **OK** to save it.

Info

Only DrayTek products can be detected by this function.

Part VII Others

Objects Settings

Define objects such as IP address, service type, keyword, file extension and others. These pre-defined objects can be applied in CSM.

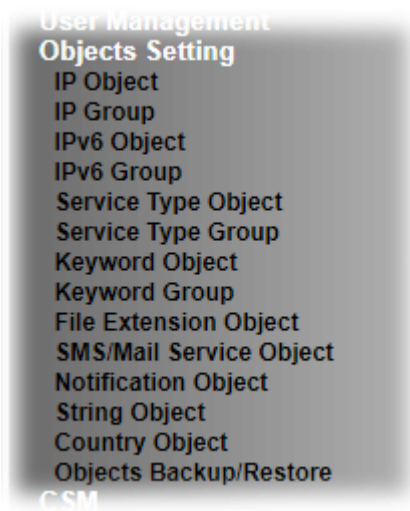

USB

USB device connected on Vigor router can be regarded as a server or WAN interface. By way of Vigor router, clients on LAN can access, write and read data stored in USB storage disk with different applications.

VII-1 Objects Settings

This section allows the creation of objects and object groups from IP addresses, service types, keywords, file extensions, SMS and email recipients, and notification types. Once set up, these objects can be applied to firewall and content management rules.

Web User Interface

VII-1-1 IP Object

For IPs in a range and service ports in a limited range usually will be applied in configuring router's settings, therefore we can define them with *objects* and bind them with *groups* for using conveniently. Later, we can select that object/group for applying it. For example, all the IPs in the same department can be defined with an IP object (a range of IP address).

Up to 192 IP Objects can be created.

Restore

未選擇任何檔案

Note:

For better compatibility, it's suggested to edit IP Objects with the provided default CSV template.

Available settings are explained as follows:

Item	Description
Backup	<p>Usually, the IP objects can be created one by one through the web page of Objects>>IP Object. However, to a user who wants to save more time in bulk creating IP objects, a quick method is offered by Vigor router to modify the IP objects with a single file, a CSV file.</p> <p>All of the IP objects (or the template) can be exported as a file by clicking Download. Then the user can open the CSV file through Microsoft Excel and modify all the IP objects at the same time.</p> <p>Backup the current IP Objects with a CSV file - Click it to backup current IP objects as a CSV file. Such file can be restored for future use.</p> <p>Download the default CSV template to edit - After clicking it, press Download to store the default CSM template (a table without any input data) to your hard disk.</p> <p>Download - Download the CSV file from Vigor router and store in your hard disk.</p>
Restore	<p>Select - Click it to specify a predefined CSV file.</p> <p>Restore - Import the selected CSV file onto Vigor router.</p>

Application Notes

A-1 How to Send a Notification to Specified Phone Number via SMS Service in WAN Disconnection

Follow the steps listed below:

1. Log into the web user interface of Vigor router.
2. Configure relational objects first. Open Object Settings>>SMS/Mail Server Object to get the following page.

Objects Setting >> SMS / Mail Service Object

SMS Provider	Mail Server	Set to Factory Default
Index	Profile Name	SMS Provider
1.		
2.		
3.		
4.		
5.		
6.		
7.		
8.		
9.	Custom 1	
10.	Custom 2	

Index 1 to Index 8 allows you to choose the built-in SMS service provider. If the SMS service provider is not on the list, you can configure Index 9 and Index 10 to add the new service provider to Vigor router.

3. Choose any index number (e.g., Index 1 in this case) to configure the SMS Provider setting. In the following page, Enter the username and password and set the quota that the router can send the message out.

Objects Setting >> SMS / Mail Service Object

Profile Index: 1

Profile Name	Local number
Service Provider	kotsms.com.tw (TW) ▼
Connection Protocol	<input checked="" type="radio"/> HTTP <input type="radio"/> HTTPS
Username	abc5026
Password	*****
Quota	3
Sending Interval	3 (seconds)

Note:

1. Only one message can be sent during the "Sending Interval" time.
2. If the "Sending Interval" was set to 0, there will be no limitation.

OK Clear Cancel Send a Test Message

- After finished the settings, click OK to return to previous page. Now you have finished the configuration of the SMS Provider profile setting.

Objects Setting >> SMS / Mail Service Object

SMS Provider		Mail Server	Set to Factory Default
Index	Profile Name	SMS Provider	
1.	Local number	kotsms.com.tw (TW)	
2.			
3.			
4.			
5.			
6.			
7.			
8.			
9.	Custom 1		
10.	Custom 2		

- Open Object Settings>>Notification Object to configure the event conditions of the notification.

Object Settings >> Notification Object

			Set to Factory Default
Index	Profile Name	Settings	
1.			
2.			
3.			
4.			
5.			
6.			
7.			
8.			

- Choose any index number (e.g., Index 1 in this case) to configure conditions for sending the SMS. In the following page, Enter the name of the profile and check the Disconnected and Reconnected boxes for WAN to work in concert with the topic of this paper.

Objects Setting >> Notification Object

Profile Index: 1

Profile Name		<input type="text" value="WAN_Notify"/>	
Category	Status		
WAN	<input checked="" type="checkbox"/> Disconnected	<input checked="" type="checkbox"/> Reconnected	
VPN Tunnel	<input type="checkbox"/> Disconnected	<input type="checkbox"/> Reconnected	
Temperature Alert	<input type="checkbox"/> USB Out of Range	<input type="checkbox"/> CPU Out of Range	<input type="text" value="0"/>
WAN Budget	<input type="checkbox"/> Limit Reached		

- After finished the settings, click **OK** to return to previous page. You have finished the configuration of the notification object profile setting.

Object Settings >> Notification Object

| [Set to Factory Default](#) |

Index	Profile Name	Settings
1.	WAN_Notify	WAN
2.		
3.		
4.		
5.		
6.		
7.		
8.		

- Now, open **Application >> SMS / Mail Alert Service**. Use the drop down list to choose SMS Provider and the Notify Profile (specify the time of sending SMS). Then, Enter the phone number in the field of Recipient Number (the one who will receive the SMS).

Applications >> SMS / Mail Alert Service

| [Set to Factory Default](#) |

SMS Alert		Mail Alert			
Index	Enable	SMS Provider	Recipient Number	Notify Profile	Schedule(1-15)
1	<input checked="" type="checkbox"/>	1 - Local number	0910221356	1 - WAN_Notify	None None
2	<input type="checkbox"/>	1 - Local number		1 - WAN_Notify	None None
3	<input type="checkbox"/>	1 - Local number		1 - WAN_Notify	None None
4	<input type="checkbox"/>	1 - Local number		1 - WAN_Notify	None None
5	<input type="checkbox"/>	1 - Local number		1 - WAN_Notify	None None
6	<input type="checkbox"/>	1 - Local number		1 - WAN_Notify	None None
7	<input type="checkbox"/>	1 - Local number		1 - WAN_Notify	None None
8	<input type="checkbox"/>	1 - Local number		1 - WAN_Notify	None None
9	<input type="checkbox"/>	1 - Local number		1 - WAN_Notify	None None
10	<input type="checkbox"/>	1 - Local number		1 - WAN_Notify	None None

Note:

All the SMS Alert profiles share the same "Sending Interval" setting if they use the same SMS Provider.

- Click **OK** to save the settings. Later, if one of the WAN connections fails in your router, the system will send out SMS to the phone number specified. If the router has only one WAN interface, the system will send out SMS to the phone number while reconnecting the WAN interface successfully.

Remark: How the customize the SMS Provider

Choose one of the Index numbers (9 or 10) allowing you to customize the SMS Provider. In the web page, Enter the URL string of the SMS provider and Enter the username and password. After clicking OK, the new added SMS provider will be added and will be available for you to specify for sending SMS out.

Objects Setting >> SMS / Mail Service Object

Note:

1. Only one message can be sent during the "Sending Interval" time.
2. If the "Sending Interval" was set to 0, there will be no limitation.

VII-2 USB Application

USB devices connected to the Vigor router can function as storage servers, WAN interfaces, network printers or thermometers.

After setting the configuration in USB Application, a USB storage device can be accessed using either the FTP or SMB protocol from LAN clients with the IP address of the Vigor router and the username and password entered in **USB Application>>USB User Management**.

Info

USB modems that are supported by the router are listed in **USB Application>>Modem Support List**. For network connection via USB modem, refer to **WAN>>Internet Access** and **WAN>>General Setup** for detailed information.

Web User Interface

- SSL VPN
- USB Application
 - USB General Settings
 - USB User Management
- File Explorer
- USB Device Status
- Temperature Sensor
- Modem Support List
- SMB Client Support List
- System Maintenance

VII-2-1 USB General Settings

This page allows you to configure the file sharing feature of the Vigor router, where USB mass storage devices such as thumb drives and hard drives can be made accessible to LAN clients. Currently, only FAT16 and FAT32 file systems are supported by the Vigor router, so verify that the USB drive contains these file systems. FAT32 is recommended because of its long filename support, which FAT16 lacks.

USB Application >> USB General Settings

USB General Settings

General Settings

Simultaneous FTP Connections (Maximum 6)

Default Charset ▼

SMB File Sharing Service (Network Neighborhood)

Enable Disable

Access Mode

LAN Only LAN And WAN

NetBios Name Service

Workgroup Name

Host Name

Printer Server

Enable Disable

Note:

1. If character set is set to "English", only English long file name is supported.
2. Multi-session FTP download will be banned by Router FTP server. If your FTP client has a multi-connection mechanism, such as FileZilla, you should limit client connections to 1 to improve performance.
3. A workgroup name must be different from the host name. The workgroup name can have up to 15 characters and the host name can have up to 15 characters. Names cannot contain any of the following: . ; : " < > * + = / \ | ?.

OK

Available settings are explained as follows:

Item	Description
General Settings	Simultaneous FTP Connections - Enter the maximum number of simultaneous FTP sessions allowed. The router allows up to 6 simultaneous sessions. Default Charset - Select the character set for file and directory names. Currently, the Vigor router supports four

	character sets. The default charset is English.
SMB File Sharing Service	Click Enable to enable SMB service (file sharing).
Access Mode	LAN Only - Only users on the LAN can connect access the shared USB disk. LAN And WAN - Both LAN and WAN users can access SMB server of the router.
NetBios Name Service	For SMB file sharing service, you need to specify a workgroup name and a host name. The two names cannot be identical, and neither can contain any of the following characters: ; : " < > * + = \ ? Workgroup Name - Enter the workgroup name. Maximum allowed length is 15 characters. Host Name - Enter the NetBIOS hostname for the router. Maximum allowed length is 23 characters.
Printer Server	Enable - Select to allow the Vigor router to act as a print server for printers connected the USB.

Select OK to save changes on the page.

VII-2-2 USB User Management

This page allows you to set up profiles for FTP/SMB users. Any user who wants to access the USB storage disk must authenticate using a username and password that have been configured on this page. Please connect a USB storage device before adding or modifying settings on this page, or else an error message will appear requesting you to do so before allowing you to proceed.

USB Application >> USB User Management

USB User Management						Set to Factory Default

Click index number to access into configuration page.

USB Application >> USB User Management

Profile Index: 1

<input checked="" type="checkbox"/> Enable	
Username	<input type="text" value="carrie"/>
Password	<input type="password" value="*****"/>
Confirm Password	<input type="password" value="*****"/>
Home Folder	<input type="text" value="/CA"/> 
Access Rule	
File	<input checked="" type="checkbox"/> Read <input checked="" type="checkbox"/> Write <input checked="" type="checkbox"/> Delete
Directory	<input type="checkbox"/> List <input type="checkbox"/> Create <input type="checkbox"/> Remove
Note: The folder name can only contain the following characters: A-Z a-z 0-9 \$ % ' - _ @ ~ ` ! () / and space.	
<input type="button" value="OK"/> <input type="button" value="Clear"/> <input type="button" value="Cancel"/>	

Available settings are explained as follows:

Item	Description
Enable	Check to activate this profile (account) for FTP service and / or SMB service. Later, the user can use the username specified in this page to login into FTP server.
Username	Enter the username for this user profile. Maximum allowed length of the username is 11 characters. Note: Anonymous user access is not supported. Note: "Admin" cannot be used as a username, as it is reserved for access to web pages on the Vigor router, and for FTP firmware upgrade. Note: Ensure that the FTP client does not use passive FTP mode as it is not supported by the Vigor router.
Password	Enter the password for this user profile. Maximum allowed length of the password is 11 characters.
Confirm Password	Enter the password again to confirm.
Home Folder	Enter the folder which will be the root folder for FTP and SMB sessions established using the credentials of this user profile. Only folders and files inside this selected root folder are accessible to the user. In addition, if the user types "/" here, the user can access into all of the disk folders and files in USB storage disk. To browse the list of folders available for selection, or to create a new folder, click the  icon. 
Note: If the USB storage device is write-protected, new	

	<p>folders cannot be created. Only existing folders can be selected.</p> <p>Note: Only folders directly under the root can be selected as the home folder.</p>
Access Rule	<p>It determines the authority for such profile. Any user, who uses such profile for accessing into USB storage disk, must follow the rule specified here.</p> <p>File - Check the items (Read, Write and Delete) for such profile.</p> <p>Directory -Check the items (List, Create and Remove) for such profile.</p>

To save changes on this page, ensure that a USB storage device is connected, and click **OK**. To discard changes, click **Cancel**. To blank out all settings in the current IP object, click **Clear**.

VII-2-3 File Explorer

File Explorer offers an easy way for users to view and manage the content of USB storage disk connected on Vigor router.

USB Application >> File Explorer

Note: The folder can not be deleted when it is not empty.

Available settings are explained as follows:

Item	Description
 Refresh	Click this icon to refresh the list of files and folders.
 Back	Click this icon to return to the parent folder.
 Create	Click this icon to add a new folder.
Current Path	Shows current folder.
Upload	To upload a file to the USB storage device, click the Browse... button to bring up the file selection dialog box. Select the file you wish to upload, and click the Upload button to initiate the upload process.

VII-2-4 USB Device Status

This page allows monitoring of the status of USB devices (disk, modem, printer, and sensor) connected to the Vigor router. To maintain the data integrity of a USB disk that is connected to the router, always click **Disconnect USB Disk** before unplugging the disk from the router.

USB Application >> USB Device Status

Disk	Modem	Printer	Sensor	Refresh
USB Mass Storage Device Status				
Connection Status: No Disk Connected				<input type="button" value="Disconnect USB Disk"/>
Disk Capacity: 0 MB				
Free Capacity: 0 MB Refresh				
USB Disk Users Connected				
Index	Service	IP Address(Port)	Username	

Available settings are explained as follows:

Item	Description
Connection Status	Shows whether a USB disk is connected or not. If there is no USB device connected to the Vigor router, "No Disk Connected" will be displayed.
Disk Capacity	Shows the total capacity of the USB storage disk.
Free Capacity	Shows the free space on the USB storage disk. Click Refresh at any time to get the most up-to-date free capacity.
USB Disk Users Connected	Shows the clients that are connected to the SMB/FTP server. Index - The profile index used by the LAN client to establish the connection. Service - Shows whether the connection is using FTP or SMB. IP Address - Shows the client's IP address. Username - Shows the username used to establish the connection.
Disconnect USB Disk	Before unplugging the USB storage device from the router, make sure you click this first to ensure that all data has been written to the disk and all open files are closed.

After a USB storage device has been connected, the **Connection Status** will be updated within a few seconds.

USB Application >> USB Device Status

Disk	Modem	Printer	Sensor	Refresh
USB Mass Storage Device Status				
Connection Status: Disk Connected				<input type="button" value="Disconnect USB Disk"/>
Write Protect Status: No				
Disk Capacity: 2009 MB				
Free Capacity: 925 MB Refresh				
USB Disk Users Connected				
Index	Service	IP Address(Port)	Username	

VII-2-5 Temperature Sensor

A USB Thermometer is now available. It complements your installed DrayTek router installations which will help you monitor the server or data communications room environment and notify you if the server room or data communications room is overheating.

During summer in particular, it is important to ensure that your server or data communications equipment are not overheating due to cooling system failures.

The inclusion of a USB thermometer in compatible Vigor routers will continuously monitor the temperature of its environment. When a pre-determined threshold is reached you will be alerted by either an email or SMS so you can undertake appropriate action.

For a list of supported USB thermometers, visit our website at <https://www.draytek.com/en/products/usb-thermometer/> or contact your local DrayTek partner.

Temperature Sensor Settings

USB Application >> Temperature Sensor Setting

Temperature Chart	Temperature Sensor Settings
Display Settings	
Temperature Calibration	<input type="text" value="0.00"/>
Temperature Unit	<input checked="" type="radio"/> Celsius <input type="radio"/> Fahrenheit
Alarm Settings	
<input type="checkbox"/> Enable Syslog Alarm	
Upper temperature limit	<input type="text" value="30.00"/>
Lower temperature limit	<input type="text" value="18.00"/>

Note:

Set 1) **Notification Object**, 2) **SMS / Mail Service Object**, 3) **SMS / Mail Alert Service** to make Vigor router send alert when the temperature reaches the limit.

OK

Available settings are explained as follows:

Item	Description
Display Settings	Temperature Calibration - Enter the difference between the actual temperature and the temperature as reported by the thermometer. Temperature Unit - Select the temperature scale to be used.
Alarm Settings	Enable Syslog Alarm - Select to enable recording of the temperature in Syslog.

Upper temperature limit/Lower temperature limit - Enter the upper and lower temperature limits. If the temperature falls outside of this range, an alert will be sent.

Temperature Chart

Below shows an example of temperature graph:

USB Application >> Temperature Sensor Graph

Manufacturer: RDing
Product: TEMPer1F_V3.4
Current Temperature: 21.06
Average Temperature: 22.33
Maximum Temperature: 23.56
Minimum Temperature: 21.06

VII-2-6 Modem Support List

This page lists the brands and models of USB modems that are supported by the Vigor router. This list is subject to change between different versions of firmware as support for new modems are added.

USB Application >> Modem Support List

The following compatibility test lists 3.5G/LTE modems **supported by Vigor router under certain environment or countries**. If the LTE modem you have is on the list but cannot work properly, please write an e-mail to support@draytek.com or consult your dealer for further information.

Brand	Model	LTE	Access Mode	Status
4G system	XSPUG P3		PPP	Y
Aiko	Aiko 76E		PPP	Y
Alcatel	Alcatel L100V	✔	DHCP	Y
	Alcatel L800	✔	DHCP	Y
	Alcatel W800	✔	DHCP	Y
	Alcatel X500		PPP	Y
	Alcatel Y855	✔	DHCP	Y
Alfa	ALFA Flyppp		PPP	Y
Amoi	Amoi H01		PPP	Y
BandRich	Bandlux C321		PPP	Y
	Bandlux C330		PPP	Y
	Bandlux C331		PPP	Y
	Bandlux C502		PPP	Y
BigPond	BigPond Next G Wireless		PPP	Y
	Broadband USB Mobile Card		PPP	Y
D-Link	<u>D_LINK DWM156</u>		DHCP	M
	Huawei E150		PPP	Y
	Huawei E153		PPP	Y
	Huawei E172		PPP	Y

VII-2-7 SMB Client Support List

This page shows a list of SMB clients on various platforms, and their levels of compatibility with the Vigor router as determined by our in-house testing. This list is subject to change as support for SMB clients are added or improved.

USB Application >> SMB Client Support List

The following compatibility test lists suggested SMB clients supported by Vigor router.

Platform	Application	Status
Microsoft® Windows® XP	Built in	I
Microsoft® Windows Vista™	Built in	Y
Microsoft® Windows® 7	Built in	Y
Microsoft® Windows® 8	Built in	M
Microsoft® Windows® 10	Built in	Y
OS X® 10.7.5	Built in	Y
OS X® 10.10	Built in	Y
Ubuntu 14.04	Built in	Y
Android™	AndSMB	Y
Android™	ES File Explorer	Y
Android™	File Expert	Y
Android™	File Manager	Y
Android™	Solid Explorer	Y
Android™	SharesFinder	Y
iOS	eXPlayer	Y
iOS	nPlayer	Y

Y: Tested and is supported.

I: Supported but has some issue.

M: Has not been tested but might be supported.

Application Notes

A-1 How can I get the files from USB storage device connecting to Vigor router?

Files on USB storage device can be reviewed by opening **USB Application>>File Explorer**. If it is necessary for you to delete, copy files on the device or write, paste files to the device, it must be done through SMB server or FTP server.

SMB service is based on the original USB FTP service. You will need to setup USB FTP first. We would like to give brief instructions on USB FTP setup here.

1. Plug the USB device to the USB port on the router. Make sure **Disk Connected** appears on the **Connection Status** as the figure shown below:

USB Application >> USB Device Status

Disk	Modem	Printer	Sensor	Refresh
USB Mass Storage Device Status				
Connection Status:	Disk Connected			Disconnect USB Disk
Write Protect Status:	No			
Disk Capacity:	2009 MB			
USB Disk Users Connected				
Index	Service	IP Address(Port)	Username	

Note:

1. Only support FAT16 and FAT32 format, FAT32 is recommended.
2. Only support to mount single partition, maximum capacity is 500GB. If there are more than one partition, only one of them will be mounted.
3. Single file size can be up to 4GB, which is the limitation of FAT32 format.
4. If the write protect switch of USB disk is turned on, the USB disk is in **READ-ONLY** mode. No data can be written to it.

2. Then, please open **USB Application >> USB General Settings** to enable SMB service.

USB General Settings

General Settings	
Simultaneous FTP Connections	<input type="text" value="5"/> (Maximum 6)
Default Charset	<input type="text" value="English"/> ▾
SMB File Sharing Service (Network Neighborhood)	
<input type="radio"/> Enable	<input checked="" type="radio"/> Disable
Access Mode	
<input checked="" type="radio"/> LAN Only	<input type="radio"/> LAN And WAN
NetBios Name Service	
Workgroup Name	<input type="text" value="WORKGROUP"/>
Host Name	<input type="text" value="Vigor"/>
Printer Server	
<input checked="" type="radio"/> Enable	<input type="radio"/> Disable

Note:

1. If character set is set to "English", only English long file name is supported.
2. Multi-session FTP download will be banned by Router FTP server. If your FTP client has a multi-connection mechanism, such as FileZilla, you should limit client connections to 1 to improve performance.
3. A workgroup name must be different from the host name. The workgroup name can have up to 15 characters and the host name can have up to 15 characters. Names cannot contain any of the following: . ; : " < > * + = / | ?.

3. Setup a user account for the FTP service by using **USB Application >>USB User Management**. Click **Enable** to enable FTP/SMB User account. In the example below, we have set up a new account with the username "user1", and granted "Read", "Write" and "List" permissions to it.

USB Application >> USB User Management

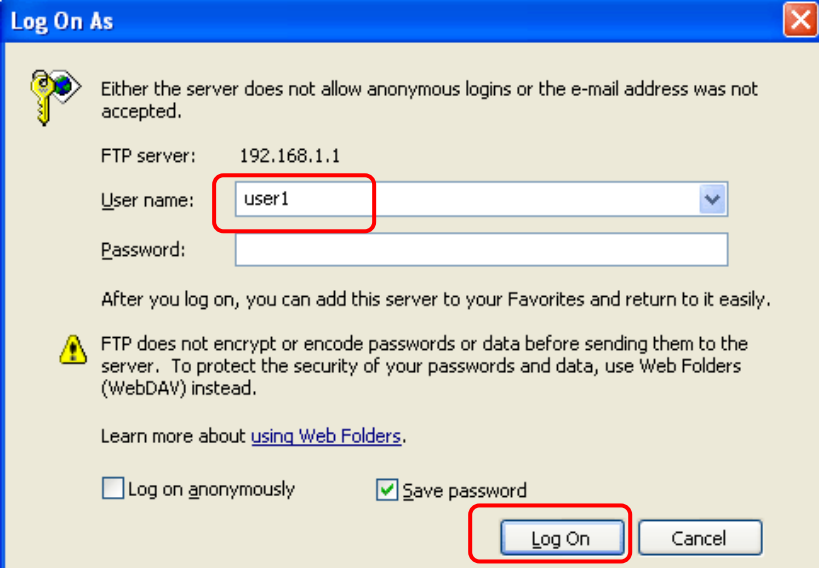

Profile Index: 1

<input checked="" type="checkbox"/> Enable	
Username	<input type="text" value="user1"/>
Password	<input type="password" value="....."/>
Confirm Password	<input type="password" value="....."/>
Home Folder	<input type="text"/>
Access Rule	
File	<input checked="" type="checkbox"/> Read <input checked="" type="checkbox"/> Write <input type="checkbox"/> Delete
Directory	<input checked="" type="checkbox"/> List <input checked="" type="checkbox"/> Create <input type="checkbox"/> Remove

Note:

The folder name can only contain the following characters: A-Z a-z 0-9 \$ % ' - _ @ ~ ` ! () and space.

4. Click **OK** to save the configuration.
5. To verify that the FTP service is running properly, open a browser window and enter ftp://192.168.1.1 as the destination. Replace 192.168.1.1 with the actual IP address of the router. When prompted to enter the login credentials, enter the username "user1" to login.

The image shows a "Log On As" dialog box with a blue title bar and a close button. It contains the following elements:

- A key icon and a message: "Either the server does not allow anonymous logins or the e-mail address was not accepted."
- FTP server: 192.168.1.1
- User name: A dropdown menu with "user1" selected and highlighted by a red box.
- Password: An empty text input field.
- Instructions: "After you log on, you can add this server to your Favorites and return to it easily."
- Warning icon and text: "FTP does not encrypt or encode passwords or data before sending them to the server. To protect the security of your passwords and data, use Web Folders (WebDAV) instead."
- Link: "Learn more about [using Web Folders](#)."
- Options: Log on anonymously and Save password.
- Buttons: "Log On" (highlighted by a red box) and "Cancel".

6. When the following screen appears, you have successfully connected to the FTP server and verified that it is running properly.

7. If you check **USB Application >> USB Disk Status** on browser, you will see the FTP session initiated by user1.

USB Application >> USB Device Status

Disk	Modem	Printer	Sensor	Refresh
USB Mass Storage Device Status				
Connection Status: Disk Connected				<input type="button" value="Disconnect USB Disk"/>
Write Protect Status: No				
Disk Capacity: 2009 MB				
USB Disk Users Connected Refresh				
Index	Service	IP Address(Port)	Username	Drop
1.	FTP	192.168.1.10(1963)	user1	<input type="button" value="Drop"/>

Note:

1. Only support FAT16 and FAT32 format, FAT32 is recommended.
2. Only support to mount single partition, maximum capacity is 500GB. If there are more than one partition, only one of them will be mounted.
3. Single file size can be up to 4GB, which is the limitation of FAT32 format.
4. If the write protect switch of USB disk is turned on, the USB disk is in **READ-ONLY** mode. No data can be written to it.

Now, users in LAN of Vigor2135 can access into the USB storage device by entering ftp://192.168.1.1 on any browser. They can add or remove files / directories, depending on the Access Rule for FTP account settings in **USB Application >>USB User Management**.

Part VIII Troubleshooting

Troubleshooting

This part will guide you to solve abnormal situations if you cannot access into the Internet after installing the router and finishing the web configuration.

VIII-1 Diagnostics

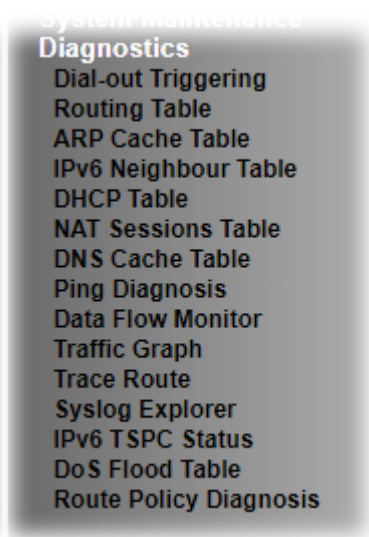

This section will guide you to solve abnormal situations if you cannot access into the Internet after installing the router and finishing the web configuration. Please follow sections below to check your basic installation status stage by stage.

- Checking if the hardware status is OK or not.
- Checking if the network connection settings on your computer are OK or not.
- Pinging the router from your computer.
- Checking if the ISP settings are OK or not.
- Backing to factory default setting if necessary.

If all above stages are done and the router still cannot run normally, it is the time for you to contact your dealer or DrayTek technical support for advanced help.

Web User Interface

This section contains utilities that can assist you in analyzing issues and failures during the setup and operation of the router.

VIII-1-1 Dial-out Triggering

This page shows the packet header that is transmitted when a WAN connection (such as a PPPoE connection) is initiated.

Diagnostics >> Dial-out Triggering

Dial-out Triggered Packet Header | [Refresh](#) |

HEX Format:

```
00 00 00 00 00 00 00-00 00 00 00 00 00-00 00
```

00 00 00 00 00 00 00 00 00-00 00 00 00 00 00 00
00 00 00 00 00 00 00 00 00-00 00 00 00 00 00 00
00 00 00 00 00 00 00 00 00-00 00 00 00 00 00 00

Index	IPv6 Address	IAID	Link-layer Address	Leased Time

Available settings are explained as follows:

Item	Description
Index	Shows the index of the DHCP entry.
IP Address	Shows the IP address assigned by the router to the MAC address.
MAC Address	Shows the MAC address of this DHCP entry.
Leased Time	Shows the remaining time of the DHCP lease of the device.
HOST ID	Shows the host ID of this network device.
Refresh	Click to reload this page with the most up-to-date information.

VIII-1-7 DNS Cache Table

The router can function as a DNS server which allows LAN clients to look up DNS information by sending DNS requests to the router. Such DNS information is temporarily cached on the router and can be viewed on this page.

Click **Diagnostics** and click **DNS Cache Table** to open the web page.

Diagnostics >> DNS Cache Table

IPv4 DNS Cache Table | [Clear](#) | [Refresh](#) |

Domain Name	IP Address	TTL(s)
-------------	------------	--------

IPv6 DNS Cache Table | [Clear](#) | [Refresh](#) |

Domain Name	IP Address	TTL(s)
-------------	------------	--------

Note:

An entry of which TTL shows "Static" is a domain name created in [LAN DNS](#).

When an entry's TTL is larger than s, this entry will be deleted from the table.

OK

Available settings are explained as follows:

Item	Description
Clear	Click to clear all cached DNS lookup entries.
Refresh	Click it to reload the page.
When an entry's TTL is larger than....	When this box is checked, DNS entries whose TTL (time to live, in seconds) exceeds the valued specified here will be deleted from the router's cache automatically. Be sure to click OK after making changes to have them saved.

VIII-1-8 Ping Diagnosis

Click Diagnostics and click Ping Diagnosis to open the web page.

Diagnostics >> Ping Diagnosis

Ping Diagnosis

IPv4 IPv6
 Source IP:

Ping to: IP Address:

Result | [Clear](#) |

or

Diagnostics >> Ping Diagnosis

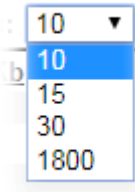

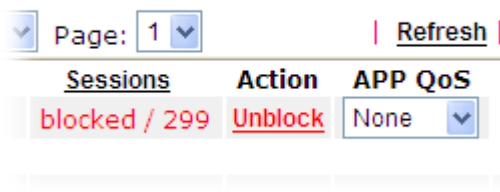

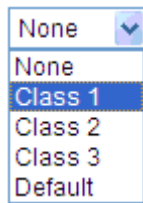

Ping Diagnosis

IPv4 IPv6
 Ping IPv6 Address:

Result | [Clear](#) |

Available settings are explained as follows:

Item	Description
IPV4 /IPV6	Select the protocol to perform the ping operation.
Source IP	Choose Auto to be let the router select the WAN interface.
Ping to	Select the type of target to which you wish to ping.
IP Address	Enter the IP address of the Host/IP that you want to ping.
Ping IPv6 Address	Enter the IPv6 address that you want to ping.
Run	Click this button to initiate the ping process. The result will be displayed on the screen.
Clear	Click this link to clear the ping result.

	
Refresh	Click to refresh this page manually.
Index	Shows the index of the data flow.
IP Address	Shows the IP address of the monitored device.
TX Rate (kbps)	Shows the transmission speed of the monitored device.
RX Rate (kbps)	Shows the receiving speed of the monitored device.
Sessions	Shows the number of session that you specified on the Limit Session web page.
Action	<p>Block - can prevent specified PC accessing into Internet within 5 minutes.</p>  <p>Unblock -The device with the IP address will be blocked for five minutes. The remaining time will be shown on the session column. Click it to cancel the IP address blocking.</p> 
APP QoS	<p>Use the drop down list to change the priority in data transmission for the specified IP address (host).</p> 
Current /Peak/Speed	<p>Current means current transmission rate and receiving rate for WAN interface.</p> <p>Peak means the highest peak value detected by the router in data transmission.</p> <p>Speed means line speed specified in WAN>>General Setup. If you do not specify any rate at that page, here will display Auto for instead.</p>

VIII-1-10 Traffic Graph

Click **Diagnostics** and click **Traffic Graph** to open the web page. Choose WAN1/ WAN3 Bandwidth, Sessions, Ping Detect, daily or weekly for viewing different traffic graph. Click **Reset** to zero the accumulated RX/TX (received and transmitted) data of WAN. Click **Refresh** to renew the graph at any time.

Diagnostics >> Traffic Graph

The horizontal axis represents time. Yet the vertical axis has different meanings. For WAN1/ WAN3 Bandwidth chart, the numbers displayed on vertical axis represent the numbers of the transmitted and received packets in the past.

For Sessions chart, the numbers displayed on vertical axis represent the numbers of the NAT sessions during the past.

VIII-1-11 Trace Route

Click **Diagnostics** and click **Trace Route** to open the web page. This page allows you to trace the routes from router to the host. Simply Enter the IP address of the host in the box and click **Run**. The result of route trace will be shown on the screen.

Trace Host / IP Address:

Result [| Clear |](#)

Available settings are explained as follows:

Item	Description
IPv4 / IPv6	Select the IP version used to perform the trace route.
Trace through	Select the WAN interface used to perform the trace route.
Protocol	Select either UDP or ICMP used to perform the trace route.
Host/IP Address	Enter the hostname or the IP address of trace route destination.

Trace Host/IP Address	Enter the hostname or the IPv6 address of trace route destination.
Run	Click this button to start the trace.
Clear	Click to clear the trace route result.

VIII-1-12 Syslog Explorer

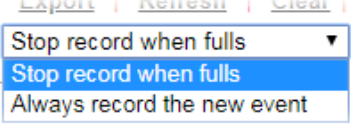

This page displays syslog information in real time. There are two options for displaying syslog information: Web Syslog and USB Syslog.

For Web Syslog

This page displays User/Firewall/call/WAN/VPN Syslog events and their time of occurrence. To enable Web Syslog, check the **Enable Web Syslog** checkbox, specify the type of Syslog events to view, and select the display mode. The log messages will start appearing as events matching the selected type occur.

[Diagnostics >> Syslog Explorer](#)

Available settings are explained as follows:

Item	Description
Enable Web Syslog	Check this box to enable Web Syslog.
Syslog Type	Select the type of Syslog info to monitor.
Export	Click to save the data as a file.
Refresh	Click to refresh this page manually.
Clear	Click to purge Syslog entries from the Web Syslog buffer.
Display Mode	Two display modes are available.  Stop record when fulls - When the Web Syslog buffer is full, no further logging will be performed. Always record the new event - Events are recorded in a FIFO manner. As the buffer gets full, oldest events are purged to make room for new events.
Time	Displays the time when the event occurred.
Message	Displays the event information.

For USB Syslog

This page displays the syslog recorded on the USB storage disk.

Diagnostics >> Syslog Explorer

Web Syslog	USB Syslog	
Note: The syslog will show while the saved syslog file is full. File: n/a Page: n/a Log Type: n/a		
Time	Log Type	Message

Available settings are explained as follows:

Item	Description
Time	Displays the time of the event occurred.
Log Type	Displays the type of the record.
Message	Displays the information for each event.

VIII-1-13 IPv6 TSPC Status

IPv6 TSPC (Tunnel Setup Protocol Client) status page could help you diagnose issues with IPv6 connections that utilize TSP.

If TSPC is configured properly, the router will display the following when the router has connected to the tunnel broker successfully.

Diagnostics >> IPv6 TSPC Status

WAN1	WAN3	Refresh
TSPC Enabled		
TSPC Connection Status		
Local Endpoint v4 Address :	114.44.54.220	
Local Endpoint v6 Address :	2001:05c0:1400:000b:0000:0000:0000:10b9	
Router DNS name :	88886666.broker.freenet6.net	
Remote Endpoint v4 Address :	81.171.72.11	
Remote Endpoint v6 Address :	2001:05c0:1400:000b:0000:0000:0000:10b8	
Tspc Prefix :	2001:05c0:1502:0d00:0000:0000:0000:0000	
Tspc Prefixlen :	56	
Tunnel Broker :	amsterdam.freenet6.net	
Tunnel Status :	Connected	

Available settings are explained as follows:

Item	Description
Refresh	Click to refresh the page to show the latest status.
WAN1 / WAN3	Select the tab that corresponds to the WAN connection that you wish to view the IPv6 TSPC status.

VIII-1-14 DoS Flood Table

This page shows IP addresses that are currently engaging in DoS flood as detected by the DoS Flooding Defense mechanism. It provides useful information to network engineers (e.g., MIS engineers) to diagnose the network environment to identify potentially malicious network traffic and entities. Identified IP addresses and the destination ports used in SYN, UDP, and ICMP Flood attacks will be shown on the respective tab pages.

IP addresses that are suspected to be attacking the network can be blocked by clicking the **Block** button on the SYN Flood, UDP Flood and ICMP Flood tab pages.

Diagnostics >> DoS Flood Table

IPv4

SYN Flood	UDP Flood	ICMP Flood	Refresh
Tracing IP		Destination Port	
.....			

IPv6

SYN Flood	UDP Flood	ICMP Flood	Refresh
Tracing IP		Destination Port	
.....			

Note:

You need to enable SYN/UDP/ICMP flood defense in [Firewall >> Defense Setup](#) to make this table effective.

Info

The icon - - means there is something wrong (e.g., attacking the system) with that IP address.

VIII-1-15 Route Policy Diagnosis

With the analysis done by such page, possible path (static route, routing table or policy route) of the packets sent out of the router can be traced.

Diagnostics >> Route Policy Diagnosis

Test how the packets will be routed

- Mode Analyze a single packet
 Analyze multiple packets by uploading an input file

Packet Information

Protocol

Analysis [export analysis](#)

Profile	Input Packet Information			Matched Route		Matched Policy		Final Result			
	Proto	Src IP	Dst IP	Route	Priority	Policy	Priority	Forwarded	Interface	Reason	
LA-branch	ICMP	192.168.1.10	19.10.10.10	N/A	No Match	N/A	No Match	N/A	N/A	N/A	The packet was dropped because neither "route" or "policy" was matched
Nr-branch	TCP	192.168.1.20	20.20.20.20	5060	No Match	N/A	No Match	N/A	N/A	N/A	The packet was dropped because neither "route" or "policy" was matched
											The packet was dropped because

Note that the analysis was based on the current "load-balance/route policy" settings, we do not guarantee it will be 100% the same as the real case.

VIII-2 Checking If the Hardware Status Is OK or Not

Follow the steps below to verify the hardware status.

1. Check the power line and WLAN/LAN cable connections. Refer to “I-2 Hardware Installation” for details.
2. Turn on the router. Make sure the ACT LED blink once per second and the correspondent LAN LED is bright.

3. If not, it means that there is something wrong with the hardware status. Simply back to “I-2 Hardware Installation” to execute the hardware installation again. And then, try again.

VIII-3 Checking If the Network Connection Settings on Your Computer Is OK or Not

Sometimes the link failure occurs due to the wrong network connection settings. After trying the above section, if the link is still failed, please do the steps listed below to make sure the network connection settings is OK.

For Windows

Info

The example is based on Windows 7. As to the examples for other operation systems, please refer to the similar steps or find support notes in www.DrayTek.com.

1. Open All Programs>>Getting Started>>Control Panel. Click Network and Sharing Center.

2. In the following window, click Change adapter settings.

3. Icons of network connection will be shown on the window. Right-click on Local Area Connection and click on Properties.

4. Select **Internet Protocol Version 4 (TCP/IP)** and then click **Properties**.

5. Select **Obtain an IP address automatically** and **Obtain DNS server address automatically**. Finally, click **OK**.

For Mac OS

1. Double click on the current used Mac OS on the desktop.
2. Open the **Application** folder and get into **Network**.
3. On the **Network** screen, select **Using DHCP** from the drop down list of Configure IPv4.

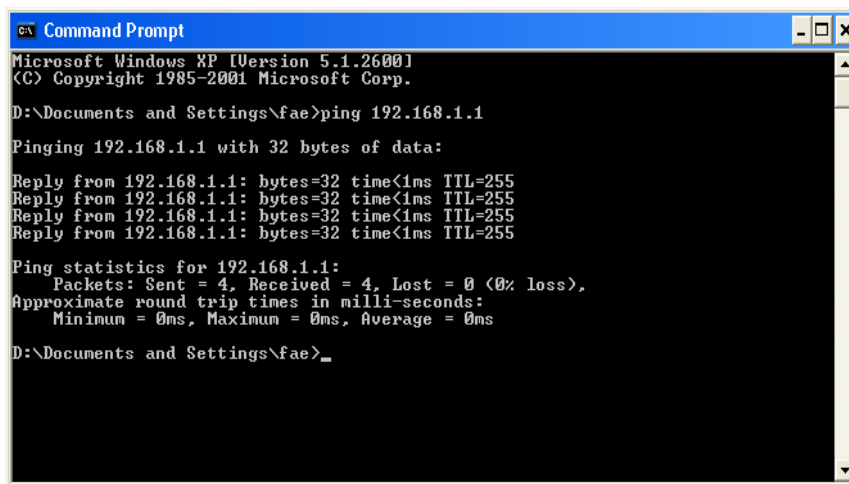

VIII-4 Pinging the Router from Your Computer

The default gateway IP address of the router is 192.168.1.1. For some reason, you might need to use “ping” command to check the link status of the router. **The most important thing is that the computer will receive a reply from 192.168.1.1.** If not, please check the IP address of your computer. We suggest you setting the network connection as get IP automatically. (Please refer to the previous section IX-3)

Please follow the steps below to ping the router correctly.

For Windows

1. Open the Command Prompt window (from Start menu> Run).
2. Enter cmd. The DOS command dialog will appear.

```
Microsoft Windows XP [Version 5.1.2600]
(C) Copyright 1985-2001 Microsoft Corp.

D:\Documents and Settings\fae>ping 192.168.1.1

Pinging 192.168.1.1 with 32 bytes of data:

Reply from 192.168.1.1: bytes=32 time<1ms TTL=255
Reply from 192.168.1.1: bytes=32 time<1ms TTL=255
Reply from 192.168.1.1: bytes=32 time<1ms TTL=255
Reply from 192.168.1.1: bytes=32 time<1ms TTL=255

Ping statistics for 192.168.1.1:
    Packets: Sent = 4, Received = 4, Lost = 0 (0% loss),
    Approximate round trip times in milli-seconds:
        Minimum = 0ms, Maximum = 0ms, Average = 0ms

D:\Documents and Settings\fae>_
```

3. Enter ping 192.168.1.1 and press [Enter]. If the link is OK, the line of “Reply from 192.168.1.1:bytes=32 time<1ms TTL=255” will appear.
4. If the line does not appear, please check the IP address setting of your computer.

For Mac OS (Terminal)

1. Double click on the current used MacOs on the desktop.
2. Open the **Application** folder and get into **Utilities**.
3. Double click **Terminal**. The Terminal window will appear.
4. Enter ping 192.168.1.1 and press [Enter]. If the link is OK, the line of “64 bytes from 192.168.1.1: icmp_seq=0 ttl=255 time=xxxx ms” will appear.

```
Terminal — bash — 80x24
Last login: Sat Jan 3 02:24:18 on ttty1
Welcome to Darwin!
Vigor10:~ draytek$ ping 192.168.1.1

Vigor10:~ draytek$
```

VIII-5 Checking If the ISP Settings are OK or Not

If WAN connection cannot be up, check if the LEDs (according to the LED explanations listed on section I-1-1, Indicators and Connectors) are correct or not. If the LEDs are off, please:

- Change the **Physical Type** from **Auto negotiation** to other values (e.g., 100M full duplex).
- Next, change the physical type of modem (e.g., DSL/FTTX(GPON)/Cable modem) offered by ISP with the same value configured in Vigor router. Check if the LEDs on Vigor router are on or not.
- If not, please install an additional switch for connecting both Vigor router and the modem offered by ISP. Then, check if the LEDs on Vigor router are on or not.
- If the problem of LEDs cannot be solved by the above measures, please contact with the nearest reseller, or send an e-mail to DrayTek FAE for technical support.
- Check if the settings offered by ISP are configured well or not.

When the LEDs are on and correct, yet the WAN connection still cannot be up, please:

- Open **WAN >> Internet Access** page and then check whether the ISP settings are set correctly. Click **Details Page** of WAN1~WAN6 to review the settings that you configured previously.

WAN >> Internet Access

VIII-6 Problems for 3G/4G Network Connection

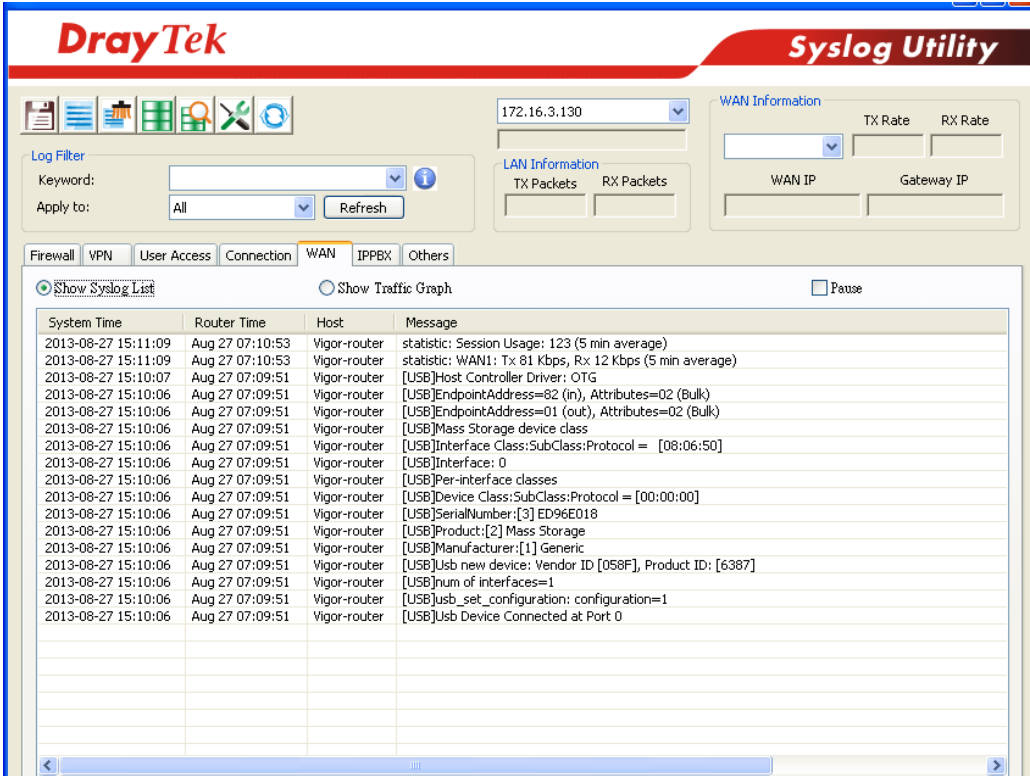

When you have trouble in using 3G/4G network transmission, please check the following:

Check if USB LED lights on or off

You have to wait about 15 seconds after inserting 3G/4G USB Modem into your Vigor2135. Later, the USB LED will light on which means the installation of USB Modem is successful. If the USB LED does not light on, please remove and reinsert the modem again. If it still fails, restart Vigor2135.

USB LED lights on but the network connection does not work

Check the PIN Code of SIM card is disabled or not. Please use the utility of 3G/4G USB Modem to disable PIN code and try again. If it still fails, it might be the compliance problem of system. Please open DrayTek Syslog Tool to capture the connection information (WAN Log) and send the page (similar to the following graphic) to the service center of DrayTek.

The screenshot displays the DrayTek Syslog Utility interface. At the top, the DrayTek logo is on the left and 'Syslog Utility' is on the right. Below the logo is a navigation bar with icons for various system functions. The main area is divided into several sections: 'Log Filter' with a 'Keyword' field and an 'Apply to' dropdown set to 'All'; 'WAN Information' with a dropdown menu showing '172.16.3.130' and fields for 'TX Rate' and 'RX Rate'; 'LAN Information' with fields for 'TX Packets' and 'RX Packets'; and 'WAN Information' with fields for 'WAN IP' and 'Gateway IP'. Below these sections is a tabbed interface with 'WAN' selected. The 'Show Syslog List' section is active, displaying a table of log entries. The table has columns for 'System Time', 'Router Time', 'Host', and 'Message'. The log entries show various USB-related messages, including statistics, endpoint addresses, and device information.

System Time	Router Time	Host	Message
2013-08-27 15:11:09	Aug 27 07:10:53	Vigor-router	statistic: Session Usage: 123 (5 min average)
2013-08-27 15:11:09	Aug 27 07:10:53	Vigor-router	statistic: WAN1: Tx 81 Kbps, Rx 12 Kbps (5 min average)
2013-08-27 15:10:07	Aug 27 07:09:51	Vigor-router	[USB]Host Controller Driver: OTG

2013-08-27 15:10:06	Aug 27 07:09:51	Vigor-router	[USB]usb Device Connected at Port 0

Transmission Rate is not fast enough

Please connect your Notebook with 3G/4G USB Modem to test the connection speed to verify if the problem is caused by Vigor2135. In addition, please refer to the manual of 3G/4G USB Modem for LED Status to make sure if the modem connects to Internet via HSDPA mode. If you want to use the modem indoors, please put it on the place near the window to obtain better signal receiving.

VIII-7 Backing to Factory Default Setting If Necessary

Sometimes, a wrong connection can be improved by returning to the default settings. Try to reset the router by software or hardware. Such function is available in **Admin Mode** only.

Info

After pressing factory default setting, you will lose all settings you did before. Make sure you have recorded all useful settings before you pressing. The password of factory default is null.

Software Reset

You can reset the router to factory default via Web page. Such function is available in **Admin Mode** only.

Go to **System Maintenance** and choose **Reboot System** on the web page. The following screen will appear. Choose **Using factory default configuration** and click **Reboot Now**. After few seconds, the router will return all the settings to the factory settings.

System Maintenance >> Reboot System

Reboot System

Do you want to reboot your router ?

Using current configuration
 Using factory default configuration

Auto Reboot Time Schedule

Schedule Profile : , , ,

Note:
Action and Duration Time settings will be ignored.

Hardware Reset

While the router is running (ACT LED blinking), press the **Factory Reset** button and hold for more than 5 seconds. When you see the **ACT** LED blinks rapidly, please release the button. Then, the router will restart with the default configuration.

After restore the factory default setting, you can configure the settings for the router again to fit your personal request.

VIII-8 Contacting DrayTek

If the router still cannot work correctly after trying many efforts, please contact your dealer for further help right away. For any questions, please feel free to send e-mail to support@DrayTek.com.

This page is left blank.

Part IX Telnet Commands

Accessing Telnet of Vigor2135

This chapter also gives you a general description for accessing telnet and describes the firmware versions for the routers explained in this manual.

Info

For Windows 7 user, please make sure the Windows Features of Telnet Client has been turned on under Control Panel>>Programs.

Enter `cmd` and press Enter. The Telnet terminal will be open later.

In the following window, type `Telnet 192.168.1.1` as below and press Enter. Note that the IP address in the example is the default address of the router. If you have changed the default, enter the current IP address of the router.

Next, enter `admin/admin` for Account/Password. Then, enter `?`. You will see a list of valid/common commands depending on the router that you use.

```
ca. Telnet 192.168.1.1

User login successful, expired time is "Unlimited".

Type ? for command help

DrayTek>
```

Telnet Command: csm appe prof

Commands under CSM allow you to set CSM profile to define policy profiles for different policy of IM (Instant Messenger)/P2P (Peer to Peer) application.

“csm appe prof “ is used to configure the APP Enforcement Profile name. Such profile will be applied in Default Rule of Firewall>>General Setup for filtering.

Syntax

```
csm appe prof -i INDEX <-v | -n NAME/setdefault>
```

Syntax Description

Parameter	Description
<i>INDEX</i>	It means to specify the index number of CSM profile, from 1 to 32.
-v	It means to view the configuration of the CSM profile.
-n	It means to set a name for the CSM profile.
<i>NAME</i>	It means to specify a name for the CSM profile, less than 15 characters.
<i>setdefault</i>	Reset to default settings.

Example

```
> csm appe prof -i 1 -n games
The name of APPE Profile 1 was setted.
```

Telnet Command: csm appe set

It is used to configure group settings for IM/P2P/Protocol and Others in APP Enforcement Profile.

```
csm appe set -i INDEX <-v GROUP| -e AP_IDX | -d AP_IDX>
```

Syntax Description

Parameter	Description
<i>INDEX</i>	Specify the index number of CSM profile, from 1 to 32.
-v	View the IM/P2P/Protocol and Others configuration of the CSM profile.
-e	Enable to block specific application.
-d	Disable to block specific application.
-a	Set the action of specific application
<i>GROUP</i>	Specify the category of the application. Available options are: IM, P2P, Protocol and Others.
<i>AP_IDX</i>	Each application has independent index number for identification in CLI command. Specify the index number of the application here. If you have no idea of the index number, do the following (Take IM as an example): Type “csm appe set -i 1 -v IM”, the system will list all of the index

numbers of the applications categorized under IM.

Example

```
> csm appe set -i 3 -d 2
>
```

Telnet Command: csm appe show

It is used to display group (IM/P2P/Protocol and Others) information APP Enforcement Profile.

`csm appe show <-a/-i/-p/-t/-m>`

Syntax Description

Parameter	Description
<code>-a</code>	View the configuration status for All groups.
<code>-i</code>	View the configuration status of IM group.
<code>-p</code>	View the configuration status of P2P group.
<code>-t</code>	View the configuration status of protocol group.
<code>-m</code>	View the configuration status of Others group.

Example

```
>csm appe show -t

          Type      Index          Name          Version  Advance
Advanced Option: (M)essage, (F)ile Transfer, (G)ame, (C)onference, and
(O)ther
Activities
-----
PROTOCOL      52          DB2
PROTOCOL      53          DNS
PROTOCOL      54          FTP
PROTOCOL      55          HTTP          1.1
PROTOCOL      56          IMAP          4.1
PROTOCOL      57          IMAP STARTTLS 4.1
PROTOCOL      58          IRC          2.4.0
.....
```

Telnet Command: csm appe config

It is used to display the configuration status (enabled or disabled) for IM/P2P/Protocol/Other applications.

`csm appe config -v INDEX <-i/-p/-t/-m>`

Syntax Description

Parameter	Description
-----------	-------------

<i>INDEX</i>	Specify the index number of CSM profile, from 1 to 32.
<i>-i</i>	View the configuration status of IM group.
<i>-p</i>	View the configuration status of P2P group.
<i>-t</i>	View the configuration status of protocol group.
<i>-m</i>	View the configuration status of Others group.

Example

```

> csm appe config -v 1 -m
  Group          Type      Index      Name          Enable
-----
  OTHERS        Tunneling  73         CloudFlare    Disable
  OTHERS        Tunneling  74         DNSCrypt     Disable
  OTHERS        Tunneling  75         DynaPass     Disable
  OTHERS        Tunneling  76         FreeGate     Disable
  OTHERS        Tunneling  77         Hotspot Shield Disable
  OTHERS        Tunneling  78         HTTP Proxy   Disable
  OTHERS        Tunneling  79         HTTP Tunnel  Disable
  OTHERS        Tunneling  80         LogMeIn Hamachi Disable
  OTHERS        Tunneling  81         MS Teredo    Disable
  OTHERS        Tunneling  82         OpenDNS      Disable
  OTHERS        Tunneling  83         OpenVPN      Disable
  OTHERS        Tunneling  84         PGPNet       Disable
.
.
.
-----
Total 81 APPs
>

```

Telnet Command: csm appe interface

It is used to configure APPE signature download interface.

`csm appe interface <AUTO/WAN#>`

Syntax Description

Parameter	Description
<i>AUTO</i>	Vigor router specifies WAN interface automatically.
<i>WAN</i>	Specify the WAN interface for signature downloading.

Example

```

> csm appe interface wan1
Download interface is set as "WAN1" now.
> csm appe interface auto
Download interface is set as "auto-selected" now.

```

Telnet Command: csm appe email

It is used to set notification e-mail for APPE signature based on the settings configured in **System Maintenance>>SysLog/Mail Alert Setup** (in which, the box of APPE Signature is checked under Enable E-Mail Alert).

`csm appe email <-e/-d/-s>`

Syntax Description

Parameter	Description
<code>-e</code>	Enable notification e-mail mechanism.
<code>-d</code>	Disable notification e-mail mechanism.
<code>-s</code>	Send an example e-mail.

Example

```
> csm appe email -e
Enable APPE email.
```

Telnet Command: csm ucf

It is used to configure settings for URL control filter profile.

Syntax

`csm ucf show`

`csm ucf setdefault`

`csm ucf msg MSG`

`csm ucf obj INDEX <-n PROFILE_NAME | -I [P/B/A/N] | uac | wf >`

`csm ucf obj INDEX -n <PROFILE_NAME>`

`csm ucf obj INDEX -p <VALUE>`

`csm ucf obj INDEX -I <P/B/A>`

`csm ucf obj INDEX uac`

`csm ucf obj INDEX wf`

Syntax Description

Parameter	Description
<code>show</code>	It means to display all of the profiles.
<code>setdefault</code>	It means to return to default settings for all of the profile.
<code>msg MSG</code>	It means de set the administration message. MSG means the content (less than 255 characters) of the message itself.
<code>obj</code>	It means to specify the object for the profile.
<code>INDEX</code>	It means to specify the index number of CSM profile, from 1 to 8.

<i>-n <PROFILE_NAME></i>	It means to set the profile name. PROFILE_NAME: specify the name of the profile (less than 16 characters).
<i>-p <VALUE></i>	Set the priority (defined by the number specified in VALUE) for the profile. VALUE: Number 0 to 3 represent different conditions. 0: It means Bundle: Pass. 1: It means Bundle: Block. 2: It means Either: URL Access Control First. 3: It means Either: Web Feature First.
<i>-l P/B/A</i>	It means the log type of the profile. They are: P: Pass, B: Block, A: All
<i>uac</i>	It means to set URL Access Control part.
<i>wf</i>	It means to set Web Feature part.

Example

```

> csm ucf obj 1 -n game -l B
Profile Index: 1   Profile Name:[game]
> csm ucf show
URL Content Filter Profile Table:
Profile      Name      Profile      Name
-----
[1]    [game    ] [5]    [
[2]    [          ] [6]    [
[3]    [          ] [7]    [
[4]    [          ] [8]    [
-----

Administration Message (Max 255 characters):
-----
<body><center><br><p>The requested Web page has been blocked by URL Content
Filt
er.<p>Please contact your system administrator for further
information.</center>
</body>

```

Telnet Command: csm ucf obj INDEX uac

It means to configure the settings regarding to URL Access Control (uac).

Syntax

csm ucf obj *INDEX* uac -v

csm ucf obj *INDEX* uac -e

```

csm ucf obj INDEX uac -d
csm ucf obj INDEX uac -a <P/B>
csm ucf obj INDEX uac -i <E/D>
csm ucf obj INDEX uac -o <KEY_WORD_Object_Index>
csm ucf obj INDEX uac -g <KEY_WORD_Group_Index>

```

Syntax Description

Parameter	Description
<i>INDEX</i>	It means to specify the index number of CSM profile, from 1 to 8.
-v	It means to view the protocol configuration of the CSM profile.
-e	It means to enable the function of URL Access Control.
-d	It means to disable the function of URL Access Control.
-a P/B	Set the action of specific application, P or B. B: Block. The web access meets the URL Access Control will be blocked. P: Pass. The web access meets the URL Access Control will be passed.
-i E/D	Prevent the web access from any IP address. E: Enable the function. The Internet access from any IP address will be blocked. D: Disable the function.
-o < <i>KEY_WORD_Object_Index</i> >	Set the keyword object. KEY_WORD_Object_Index: Specify the index number of the object profile.
-g < <i>KEY_WORD_Group_Index</i> >	Set the keyword group. KEY_WORD_Group_Index: Specify the index number of the group profile.

Example

```

> csm ucf obj 1 uac -i E
Log:[block]
Priority Select : [Either : Url Access Control First]
-----
URL Access Control
[ ]Enable URL Access Control   Action:[pass]
[v]Prevent web access from IP address.
  No  Obj NO.   Object Name
-----
>

```

Telnet Command: csm ucf obj INDEX wf

It means to configure the settings regarding to Web Feature (wf).

Syntax

csm ucf obj *INDEX wf -v*

csm ucf obj *INDEX wf -e*

csm ucf obj *INDEX wf -d*

csm ucf obj *INDEX wf -a <P/B>*

csm ucf obj *INDEX wf -s <WEB_FEATURE>*

csm ucf obj *INDEX wf -u <WEB_FEATURE>*

csm ucf obj *INDEX wf -f <File_Extension_Object_index>*

Syntax Description

Parameter	Description
<i>INDEX</i>	It means to specify the index number of CSM profile, from 1 to 8.
<i>-v</i>	It means to view the protocol configuration of the CSM profile.
<i>-e</i>	It means to enable the restriction of web feature.
<i>-d</i>	It means to disable the restriction of web feature.
<i>-a P/B</i>	Set the action of web feature, P or B. B: Block. The web access meets the web feature will be blocked. P: Pass. The web access meets the web feature will be passed.
<i>-s <WEB_FEATURE></i>	It means to enable the the Web Feature configuration. WEB_FEATURE: Features available for configuration are: c: Cookie p: Proxy u: Upload
<i>-u <WEB_FEATURE></i>	It means to cancel the web feature configuration. WEB_FEATURE: Features available for configuration are: c: Cookie p: Proxy u: Upload
<i>-f <File_Extension_Object_index></i>	It means to set the file extension object index number. File_Extension_Object_index: Enter the index number (1 to 8) for the file extension object.

Example

```
> csm ucf obj 1 wf -s c
-----
Web Feature
[ ]Enable Restrict Web Feature   Action:[pass]

File Extension Object Index : [0] Profile Name : []

[V] Cookie [ ] Proxy [ ] Upload
```

Telnet Command: csm wcf

It means to configure the settings regarding to web control filter (wcf).

Syntax

csm wcf show

csm wcf look

csm wcf cache

csm wcf server WCF_SERVER

csm wcf msg <MSG>

csm wcf setdefault

csm wcf obj INDEX -v

csm wcf obj INDEX -a <P/B>

csm wcf obj INDEX -n <PROFILE_NAME>

csm wcf obj INDEX -l <N/P/B/A>

csm wcf obj INDEX -o <KEY_WORD Object Index>

csm wcf obj INDEX -g <KEY_WORD Group Index>

csm wcf obj INDEX -w <E/D/P/B>

csm wcf obj INDEX -s <CATEGORY/WEB_GROUP>

csm wcf obj INDEX -u <CATEGORY/WEB_GROUP>

Syntax Description

Parameter	Description
<i>show</i>	It means to display the web content filter profiles.
<i>look</i>	It means to display the license information of WCF.
<i>cache</i>	It means to set the cache level for the profile.
<i>server WCF_SERVER</i>	It means to set web content filter server.
<i>msg <MSG></i>	It means de set the administration message. MSG: Enter the content (less than 255 characters) of the message itself.
<i>setdefault</i>	It means to return to default settings for all of the profile.
<i>Obj <INDEX></i>	It means to specify the object profile. INDEX: It means to specify the index number of web content filter profile, from 1 to 8.
<i>- v</i>	It means to view the web content filter profile.
<i>-a <P/B></i>	Set the action of web content filter profile, P or B. B: Block. The web access meets the web feature will be blocked. P: Pass. The web access meets the web feature will be passed.
<i>-n <PROFILE_NAME></i>	It means to set the profile name. <PROFILE_NAME>: specify the name of the profile (less than 16 characters).
<i>-l <N/P/B/A></i>	It means the log type of the profile. They are: P: Pass, B: Block,

	A: All, N: None
-o < KEY_WORD_Object_Index>	Set the keyword object. KEY_WORD_Object_Index: Specify the index number of the object profile.
-g < KEY_WORD_Group_Index>	Set the keyword group. KEY_WORD_Group_Index: Specify the index number of the group profile.
-w <E/D/P/B>	It means to set the action for the black and white list. E:Enable, D:Disable, P:Pass, B:Block
-s <CATEGORY/WEB_GROUP>	It means to choose the items under CATEGORY or WEB_GROUP. <CATEGORY >: Child_Protection, Leisure, Business, Chating, Computer Internet, Other <WEB_GROUP>: Includes: "Advertisement & Pop-Ups", "Alcohol & Tobacco", "Anonymizers", "Arts", "Business", "Transportation", "Chat", "Forums & Newsgroups", "Compromised", "Computers & Technology", "Criminal & Activity", "Dating & Personals", "Down sites", "Education", "Entertainment", "Finance", "Gambling", "Games", "Government", "Hate & Intolerance", "Health & Medicine", "Illegal Drug", "Job Search", "Streaming Media & Downloads", "News", "Non-profits & NGOs", "Nudity", "Personal Sites", "Phishing & Fraud", "Politics", "Pornography & Sexually explicit", "Real Estate", "Religion", "Restaurants & Dining", "Search engines & Portals", "Shopping", "Social Networking", "Spam sites", "Sports", "Malware", "Translators", "Travel", "Violence", "Weapons", "Web-Based Email", "General", "Leisure & Recreation", "Botnets", "Cults", "Fashion & Beauty", "Greeting Cards", "Hacking", "Illegal Softwares", "Image Sharing", "Information Security", "Instant Messaging", "Network Errors", "Parked Domains", "Peer-to-Peer", "Private IP Address", "School Cheating", "Sex Education", "Tasteless", "Child Abuse Images", "Uncategorised Sites"
-u <CATEGORY/WEB_GROUP>	It means to discard items under CATEGORY or WEB_GROUP. <CATEGORY >: Child_Protection, Leisure, Business, Chating, Computer Internet, Other <WEB_GROUP>: Includes: "Advertisement & Pop-Ups", "Alcohol & Tobacco", "Anonymizers", "Arts", "Business", "Transportation", "Chat", "Forums & Newsgroups", "Compromised", "Computers & Technology", "Criminal & Activity", "Dating & Personals", "Down sites", "Education", "Entertainment", "Finance", "Gambling", "Games", "Government", "Hate & Intolerance", "Health & Medicine", "Illegal Drug", "Job Search",

"Streaming Media & Downloads", "News", "Non-profits & NGOs", "Nudity", "Personal Sites", "Phishing & Fraud", "Politics", "Pornography & Sexually explicit", "Real Estate", "Religion", "Restaurants & Dining", "Search engines & Portals", "Shopping", "Social Networking", "Spam sites", "Sports", "Malware", "Translators", "Travel", "Violence", "Weapons", "Web-Based Email", "General", "Leisure & Recreation", "Botnets", "Cults", "Fashion & Beauty", "Greeting Cards", "Hacking", "Illegal Softwares", "Image Sharing", "Information Security", "Instant Messaging", "Network Errors", "Parked Domains", "Peer-to-Peer", "Private IP Address", "School Cheating", "Sex Education", "Tasteless", "Child Abuse Images", "Uncategorised Sites"

Example

```
> csm wcf obj 1 -n test_wcf
Profile Index: 1
Profile Name:[test_wcf]
[ ]White/Black list
Action:[block]
  No  Obj NO.   Object Name
  ---
  No  Grp NO.   Group Name
  ---
Action:[block]
Log:[block]
-----
child Protection Group:
 [v]Alcohol & Tobacco      [v]Criminal & Activity   [v]Gambling
 [v]Hate & Intolerance     [v]Illegal Drug         [v]Nudity
 [v]Pornography & Sexually explicit [v]Violence             [v]Weapons
 [v]School Cheating        [v]Sex Education        [v]Tasteless
 [v]Child Abuse Images
-----
leisure Group:
 [ ]Entertainment          [ ]Games                 [ ]Sports
 [ ]Travel                 [ ]Leisure & Recreation [ ]Fashion & Beauty

```

Telnet Command: csm dnsf

It means to configure the settings regarding to DNS filter.

```
csm dnsf enable <ON/OFF>
csm dnsf syslog <N/P/B/A>
csm dnsf wcf <INDEX>
csm dnsf ucf <INDEX>
csm dnsf cachetime <CACHE_TIME>
csm dnsf blockpage <value>
csm dnsf profile_show
csm dnsf profile_edit INDEX
csm dnsf profile_edit INDEX -n <PROFILE_NAME>
csm dnsf profile_edit INDEX -I <P/B/A>
csm dnsf profile_edit INDEX -w <WCF_PROFILE>
```

```

csm dnsf profile_edit INDEX -u <UCF_PROFILE>
csm dnsf profile_edit INDEX -c <CACHE_TIME>
csm dnsf profile_setdefault
csm dnsf local_bw <e/d/p/b/a/g/o/s/c>

```

Syntax Description

Parameter	Description
<i>enable</i> <ON/OFF>	Enable or disable DNS Filter. ON: enable. OFF: disable.
<i>syslog</i> <N/P/B/A>	Determine the content of records transmitting to Syslog. P: Pass. Records for the packets passing through DNS filter will be sent to Syslog. B: Block. Records for the packets blocked by DNS filter will be sent to Syslog. A: All. Records for the packets passing through or blocked by DNS filter will be sent to Syslog. N: None. No record will be sent to Syslog.
<i>wcf</i> <INDEX>	Specify a WCF profile (1 to 8) as the base of DNS filtering. Type a number to indicate the index number of WCF profile (1 is first profile, 2 is second profile, and so on ...).
<i>Ucf</i> <INDEX>	Specify a UCF profile (1 to 8) as the base of DNS filtering. Type a number to indicate the index number of UCF profile (1 is first profile, 2 is second profile, and so on ...).
<i>cachetime</i> <CACHE_TIME>	CACHE_TIME: It means to set the time for cache to live (available values are 1 to 24; 1 is one hour, 2 is two hours, and so on ...) for DNS filter. OFF is no cache ; AUTO is using TTL from pkt.
<i>blockpage</i> <value>	DNS sends block page for redirect port. When a web page is blocked by DNS filter, the router system will send a message page to describe that the page is not allowed to be visited. Value includes on, off and show. ON: Enable the function of displaying message page. OFF: Disable the function of displaying message page. SHOW: Display the function of displaying message page is ON or OFF.
<i>profile_show</i>	Display the table of the DNS filter profile.
<i>profile_edit</i>	Modify the content of the DNS filter profile.
<i>-n</i> <PROFILE_NAME>	PROFILE_NAME: Enter the name of the DNS filter profile that you want to modify.
<i>-l</i> <P/B/A>	Specify the log type of the profile. P: Pass. B: Block. A: All.
<i>-w</i> <WCF_PROFILE>	WCF_PROFILE: Enter the index number of the WCF profile.
<i>-u</i> <UCF_PROFILE>	UCF_PROFILE: Enter the index number of the UCF profile.
<i>-c</i> <CACHE_TIME>	-c means to set the cache time for DNS filter. CACHE_TIME: It means to set the time for cache to live (available values are 1 to 24; 1 is one hour, 2 is two hours, and so on ...) for DNS filter.
<i>profile_setdefault</i>	Reset to factory default setting.
<i>local_bw</i> e/d/p/b/s/c	Set the Black/White List of DNS Filter Local Setting. e: Enable the function of black/white list. d: Disable the function of black/white list. p: Set the action as "Pass". b: Set the action as "Block". s: Show the config setting. c: Clear the config setting and reset to factory default settings.
<i>local_bw a</i> <type index> <START_IP><END/MASK_IP>	Set the address type for Black/White List of DNS Filter. type index: Enter 0/1/2/3/4. In which, 0=mask, 1=single, 2=any, 3=range, 4=group and objects <START_IP>: Enter an IP address as a starting point. <END/MASK_IP>: Enter an IP address as an ending point.
<i>local_bw g</i> <item>	Select the group index for Black/White List of DNS Filter.

<i>number</i> >< <i>group index</i> >	item_number: 1 or 2 (group 1 or group 2) group_index: 1 to 192
<i>local_bw o</i> < <i>item number</i> >< <i>group index</i> >	Select the object index for Black/White List of DNS Filter. item_number: 1 or 2 (object 1 or object 2) object_index: 1 to 32

Example

```
> csm dnsf enable on
DNS Filter enable!
> csm dnsf wcf 1
dns service set up!!!
> csm dnsf cachetime auto
use TTL from pkt!!!
> csm dnsf local_bw a 0 192.168.1.20 255.255.255.0
Address Type: 0:mask, 1:single, 2:any, 3:range, 4:object and group
Set the [MASK] Address type
> csm dnsf profile_edit 1 -n testformarket
Profile Index: 1
Profile Name:[testformarket]
Log:[block]
WCF Profile Index: 0
UCF Profile Index: 0
>
```

Telnet Command: ddns enable

Enable/disable the DDNS service.

Syntax Description

Parameter	Description
<i>Enable</i> <0/1>	Enable or disable DDNS service. 1: enable. 0: disable.

Example

```
> ddns enable 1
Enable Dynamic DNS Setup
>
```

Telnet Command: ddns set

This command allows users to set Dynamica DNS account.

Syntax

ddns set option <*value*>

Syntax Description

Parameter	Description
<i>-i</i> < <i>value</i> >	It means index number of Dynamic DNS Account. <value>=1-6
<i>-E</i> < <i>value</i> >	It means to enable /disable Dynamic DNS Account. <value>=0-1 0: Disable 1: Enable
<i>-W</i> < <i>value</i> >	It means to specify WAN Interface. <value>=1-4 1: WAN1 First 2: WAN1 Only 3: WAN2 First example: To set WAN Interface: WAN1 First
<i>-L</i> < <i>value</i> >	It means to type Login Name.

	[value]: limit up to 64 characters
-P <value>	It means to type Password. [value]: limit up to 24 characters
-C <value>	It means to enable /disable Wildcards. <value>=0-1 0: Disable 1: Enable
-B <value>	It means to enable / disable Backup MX. <value>=0-1 0: Disable 1: Enable
-M <value>	It means to type Mail Extender. [value]: limit up to 60 characters
-R <value>	It means to type Determine Real WAN IP. <value>=0-1 0: WAN IP, 1: Internet IP
-S <value>	It means to specify Servive Provider. If user want to set User-Defined page, value must select 1. <value>= 1~19 1: User-Defined 2: 3322 DDNS (www.3322.org) 3: ChangeIP.com (www.changeip.com) 4: ddns.com.cn (www.ddns.com.cn) 5: DtDNS (www.dtdns.com) 6: dyn.com (www.dyn.com) 7: DynAccess (www.dynaccess.com) 8: dynami.co.za (www.dynami.co.za) 9: freedns.afraid.org (freedns.afraid.org) 10: NO-IP.COM Free (www.no-ip.com) 11:.opendns.com (www.opendns.com) 12: OVH (www.ovh.com) 13: Strato (www.strato.eu) 14: TwoDNS (www.twodns.de) 15: TZO (www.tzo.com) 16: ubddns.org (ubddns.org) 17: Viettel DDNS (vddns.vn) 18: vigorddns.com (www.vigorddns.com) 19: ZoneEdit DDNS (dynamic.zoneedit.com)
T <value>	It means to type Servive Type. <value>= 1~3 1: Dynamic 2: Custom 3: Static
-D <Host Name> <sub Domain Name>	It means to type Domain Name. i.e: Account index 1 setting Domain Name for Dynamic Service Type >> ddns set -i 1 -T 1 -D "host ddns.com.cn" i.e: Account index 2 setting Domain Name for Custom Service Type >> ddns set -i 2 -T 2 -D "domain name" i.e: Account index 3 setting Domain Name for Static Service Type >> ddns set -i 3 -T 3 -D "domain name"
-H <value>	It means to type User-Defined Provider Host. <value>= limit up to 64 characters
-A <value>	It means to type User-Defined Service API. <value>= limit up to 256 characters
-a <value>	It means to type User-Defined Auth Type. <value>=0-1 0: basic 1: URL
-N <value>	It means to type User-Defined Connection Type. <value>=0-1 0: Http 1: Https
-O <value>	It means to type User-Defined Server Response. <value>: limit up to 32 characters

Example

```
> ddns set -i 1 -S 6 -T 1 -D "hostname dnsalias.net" -L user1 -P pwd1
> Save OK
>
```

Telnet Command: ddns log

Displays the DDNS log.

Example

```
>ddns log
>
```

Telnet Command: ddns time

Sets and displays the DDNS time.

Syntax

`ddns time <update in minutes>`

Syntax Description

Parameter	Description
<i>Update in minutes</i>	Enter the value as DDNS time. The range is from 1 to 14400.

Example

```
> ddns time
ddns time <update in minutes>
Valid: 1 ~ 1440
%Now: 1440
> ddns time 1000
ddns time <update in minutes>
Valid: 1 ~ 1440
%Now: 1000
```

Telnet Command: ddns forceupdate

This command will update DDNS automatically.

Example

```
> ddns forceupdate
Now updating DDNS ...
Please check result by using command "ddns log"
```

Telnet Command: ddns setdefault

This command will return DDS with factory default settings.

Example

```
> ddns setdefault
>Set to Factory Default.
```

Telnet Command: ddns show

This command allows users to check the content of selected DDNS account.

Syntax

ddns show -i <value>

Syntax Description

Parameter	Description
-i <value>	Display the content of selected DDNS account by entering the index number of the account. <value>=1-6

Example

```
> ddns show -i 1
-----
Index: 1
[ ] Enable Dynamic DNS Account
WAN Interface: WAN1 First
Service Provider: dyn.com (www.dyn.com)
Service Type: Dynamic
Domain Name: [].[]
Login Name:
[ ] Wildcards
[ ] Backup MX
Mail Extender:
Determine Real WAN IP: WAN IP
>
```

Telnet Command: dos

This command allows users to configure the settings for DoS defense system.

Syntax

dos <-V / D / A>

dos -s <ATTACK_F> <THRESHOLD> <TIMEOUT>

dos -a / e <ATTACK_F><ATTACK_0> / d <ATTACK_F><ATTACK_0>>

dos -o <LOG_TYPE> / p <LOG_TYPE> / l <LOG_TYPE>

dos -P <add4/remove4> <type> <value> / <add6/remove6> <type> <value> / <show> /
remove4 all / remove6 all>

dos -B <add4/remove4> <type> <value> / <add6/remove6> <type> <value> / <show> /
remove4 all / remove6 all>

Syntax Description

Parameter	Description
-V	It means to view the configuration of DoS defense system.
-D	It means to deactivate the DoS defense system.
-A	It means to activate the DoS defense system.
-s <ATTACK_F> <THRESHOLD> <TIMEOUT>	It means to enable the defense function for a specific attack and set its parameter(s). <ATTACK_F>: Specify the name of flooding attack(s) or portscan, e.g., synflood, udpflood, icmpflood, or postscan. <THRESHOLD>: It means the packet rate (packet/second) that a flooding attack will be detected. Set a value larger than 20. <TIMEOUT>: It means the time (seconds) that a flooding attack will

	be blocked. Set a value larger than 5.
<code>-a /- e</code> <code><ATTACK_F><ATTACK_0></code>	It means to enable the defense function for all attacks or a specific attack listed in ATTACK_0. <ATTACK_F>: Specify the name of flooding attack(s) or portscan, e.g., synflood, udpflood, icmpflood, or postscan. <ATTACK_0>: It means to specify a name of the following attacks: ip_option, tcp_flag, land, teardrop, smurf, pingofdeath, traceroute, icmp_frag, syn_frag, unknow_proto, fraggle.
<code>-d <ATTACK_F><ATTACK_0></code>	It means to disable the defense function for a specific attack(s). <ATTACK_F>: Specify the name of flooding attack(s) or portscan, e.g., synflood, udpflood, icmpflood, or postscan. <ATTACK_0>: It means to specify a name of the following attacks: ip_option, tcp_flag, land, teardrop, smurf, pingofdeath, traceroute, icmp_frag, syn_frag, unknow_proto, fraggle.
<code>-P <add4/remove4> <type></code> <code><value> <add6/remove6></code> <code><type> <value> <show> </code> <code>remove4 all remove6 all></code>	Add or remove the IPv4/IPv6 address in the white passing IP list. add4/remove4: Add /remove an IPv4/IPv6 address to/from the whitelist. add6/remove6: Add/remove an IPv6 address to/from the whitelist. Type: Two types, -i and -c. In which, "-i" means the IPv4 address and "-c" means the country object. Value: Enter the IP address for -i; enter the index number of the country object profile. Show: Display the whitelist.
<code>-B <add4/remove4> <type></code> <code><value> <add6/remove6></code> <code><type> <value> <show> </code> <code>remove4 all remove6 all></code>	Add or remove the IPv4/IPv6 address in the black blocking IP list. add4/remove4: Add /remove an IPv4/IPv6 address to/from the blacklist. add6/remove6: Add/remove an IPv6 address to/from the blacklist. Type: Two types, -i and -c. In which, "-i" means the IPv4 address and "-c" means the country object. Value: Enter the IP address for -i; enter the index number of the country object profile. Show: Display the blacklist.
<code>dos -o <LOG_TYPE></code>	Enable/Disable dos defense log. <LOG_TYPE>: Enter 0 or 1. 0: Disable 1: Enable
<code>dos -p <LOG_TYPE></code>	Enable/Disable spoofing defense log. <LOG_TYPE>: Enter 0 or 1. 0: Disable 1: Enable
<code>dos -l <LOG_TYPE></code>	Enable/Disable dos defense black/white list log. <LOG_TYPE>: Enter 0 to 3. 0: None 1: White list 2: Black List 3: All

Example

```
>dos -A
The Dos Defense system is Activated
>dos -s synflood 50 10
Synflood is enabled! Threshold=50 <pke/sec> timeout=10 <pke/sec>
```

Telnet Command: exit

Type this command will leave telnet window.

Telnet Command: Internet

This command allows you to configure detailed settings for WAN connection.

Syntax

internet *-W n -M n [-<command> <parameter> | ...]*

Syntax Description

Parameter	Description
<i>-M n</i>	M means to set Internet Access Mode (Mandatory) and n means different modes (represented by 0 - 3) n=0: Offline n=1: PPPoE n=2: Dynamic IP n=3: Static IP
<i><command><parameter>[...]</i>	The available commands with parameters are listed below. [...] means that you can Enter several commands in one line.
<i>-S <isp name></i>	It means to set ISP Name (max. 23 characters).
<i>-P <on/off></i>	It means to enable PPPoE Service.
<i>-u <username></i>	It means to set username (max. 49 characters) for Internet accessing.
<i>-p <password></i>	It means to set password (max. 49 characters) for Internet accessing.
<i>-a n</i>	It means to set PPP Authentication Type and n means different types (represented by 0-1). n=0: PAP/CHAP (this is default setting) n=1: PAP Only
<i>-t n</i>	It means to set connection duration and n means different conditions. n=-1: Always-on n=1 ~ 999: Idle time for offline (default 180 seconds)
<i>-i <ip address></i>	It means that <i>PPPoE server</i> will assign an IP address specified here for CPE (PPPoE client). If you type 0.0.0.0 as the <ip address>, ISP will assign suitable IP address for you. However, if you type an IP address here, the router will use that one as a fixed IP.
<i>-w <ip address></i>	It means to assign WAN IP address for such connection. Please type an IP address here for WAN port.
<i>-n <netmask></i>	It means to assign netmask for WAN connection. You have to type 255.255.255.xxx (x is changeable) as the netmask for WAN port.
<i>-g <gateway></i>	It means to assign gateway IP for such WAN connection.
<i>-s <server ip></i>	Set the PPTP/L2TP Server IP. <server ip>: Enter the IP address (e.g. , ppp.qqq.rrr.sss) as the PPTP/L2TP server IP.
<i>-A <idx></i>	Set current interface as Always On mode and specify the <idx> number as backup WAN#. <idx>: Enter the index number.
<i>-B <mode></i>	Set current interface as Backup mode. <mode>: Enter 0 ro 1. 0: When any WAN disconnect; 1: When all WAN disconnect.
<i>-V</i>	It means to view Internet Access profile.

-C <sim pin code>	Set (PPP mode) SIM PIN code (max. 15 characters).
-O <init string>	Set (PPP mode) Modem Initial String (max. 47 characters).
-T <init string2>	Set (PPP mode) Modem Initial String2 (max. 47 characters)
-D <dial string>	Set (PPP mode) Modem Dial String (max. 31 characters).
-v <service name>	Set (PPP mode) Service Name (max. 23 characters).
-m <ppp username>	Set (PPP mode) PPP Username (max. 63 characters).
-o <ppp password>	Set (PPP mode) PPP Password (max. 62 characters).
-e n	Set (PPP mode) PPP Authentication Type. n= 0: PAP/CHAP (default), 1: PAP Only
-q n	(PPP mode) Index(1-15) in Schedule Setup-One
-x n	(PPP mode) Index(1-15) in Schedule Setup-Two
-y n	(PPP mode) Index(1-15) in Schedule Setup-Three
-z n	(PPP mode) Index(1-15) in Schedule Setup-Four
-Q <mode>	Set (PPP mode or DHCP mode) WAN Connection Detection Mode. <mode> 0: ARP Detect; 1: Ping Detect
-I <ping ip>	Set (PPP mode or DHCP mode) WAN Connection Detection Ping IP. <ping ip>= ppp.qqq.rrr.sss: WAN Connection Detection Ping IP
-L n	Set (PPP mode) WAN Connection Detection TTL (1-255) value.
-E <sim pin code>	Set (DHCP mode) SIM PIN code (max. 19 characters).
-G <mode>	Set (DHCP mode) Network Mode. <mode> 0: 4G/3G/2G; 1: 4G Only; 2: 3G Only; 3: 2G Only
-N <apn name>	Set (DHCP mode) APN Name (max. 47 characters)
-U n	Set the MTU value for DHCP mode. n: 1000-1440.

Example

```
>internet -M 1 -S tcom -u username -p password -a 0 -t -1 -i 0.0.0.0
WAN1 Internet Mode set to PPPoE/PPPoA
WAN1 ISP Name set to tcom
WAN1 Username set to username
WAN1 Password set successful
WAN1 PPP Authentication Type set to PAP/CHAP
WAN1 Idle timeout set to always-on
WAN1 Gateway IP set to 0.0.0.0
> internet -V
WAN1 Internet Mode:
PPPoE
ISP Name: tcom
Username: username
Authentication: PAP/CHAP
Idle Timeout: -1
WAN IP: Dynamic IP
```

Telnet Command: ip pubsubnet

This command allows users to enable or disable the IP routing subnet for your router.

Syntax

ip 2ndsubnet <Enable/Disable>

Syntax Description

Parameter	Description
<i>Enable</i>	Enable the function.
<i>Disable</i>	Disable the function.

Example

```
> ip 2ndsubnet enable
2nd subnet enabled!
```

Telnet Command: ip pubaddr

This command allows to set the IP routed subnet for the router.

Syntax

ip pubaddr ?

ip pubaddr <public subnet IP address>

Syntax Description

Parameter	Description
<i>?</i>	Display an IP address which allows users set as the public subnet IP address.
<i>public subnet IP address</i>	Specify an IP address. The system will set the one that you specified as the public subnet IP address.

Example

```
> ip pubaddr ?
% ip addr <public subnet IP address>
% Now: 192.168.0.1

> ip pubaddr 192.168.2.5
% Set public subnet IP address done !!!
```

Telnet Command: ip pubmask

This command allows users to set the mask for IP routed subnet of your router.

Syntax

ip pubmask ?

ip pubmask <public subnet mask>

Syntax Description

Parameter	Description
-----------	-------------

?	Display an IP address which allows users set as the public subnet mask.
<i>public subnet IP address</i>	Specify a subnet mask. The system will set the one that you specified as the public subnet mask.

Example

```
> ip pubmask ?
% ip pubmask <public subnet mask>
% Now: 255.255.255.0

> ip pubmask 255.255.0.0
% Set public subnet mask done !!!
```

Telnet Command: ip addr

This command allows users to set/add a specified LAN IP your router.

Syntax

`ip addr <IP address>`

Syntax Description

Parameter	Description
<i>IP address</i>	It means the LAN IP address.

Example

```
>ip addr 192.168.50.1
% Set IP address OK !!!
```

Info

When the LAN IP address is changed, the start IP address of DHCP server are still the same. To make the IP assignment of the DHCP server being consistent with this new IP address (they should be in the same network segment), the IP address of the PC must be fixed with the same LAN IP address (network segment) set by this command for accessing into the web user interface of the router. Later, modify the start addresses for the DHCP server.

Telnet Command: ip nmask

This command allows users to set/add a specified netmask for your router.

Syntax

```
ip nmask <IP netmask>
```

Syntax Description

Parameter	Description
<i>IP netmask</i>	It means the netmask of LAN IP.

Example

```
> ip nmask 255.255.0.0
% Set IP netmask OK !!!
```

Telnet Command: ip arp

ARP displays the matching condition for IP and MAC address.

Syntax

```
ip arp add <IP address> <MAC address> <LAN or WAN>
```

```
ip arp del <IP address> <LAN or WAN>
```

```
ip arp flush
```

```
ip arp status
```

```
ip arp accept <0/1/2/3/4/5/status>
```

```
ip arp setCacheLife <time>
```

In which, **arp add** allows users to add a new IP address into the ARP table; **arp del** allows users to remove an IP address; **arp flush** allows users to clear arp cache; **arp status** allows users to review current status for the arp table; **arp accept** allows to accept or reject the source /destination MAC address; **arp setCacheLife** allows users to configure the duration in which ARP caches can be stored on the system. If **ip arp setCacheLife** is set with "60", it means you have an ARP cache at 0 second. Sixty seconds later without any ARP messages received, the system will think such ARP cache is expired. The system will issue a few ARP request to see if this cache is still valid.

Syntax Description

Parameter	Description
<i>IP address</i>	It means the LAN IP address.
<i>MAC address</i>	It means the MAC address of your router.
<i>LAN or WAN</i>	It indicates the direction for the arp function.
<i>0/1/2/3/4/5/status</i>	0: disable to accept illegal source mac address 1: enable to accept illegal source mac address 2: disable to accept illegal dest mac address 3: enable to accept illegal dest mac address 4: Decline VRRP mac into arp table 5: Accept VRRP mac into arp table status: display the setting status.
<i>Time</i>	Available settings will be 10, 20, 30,....2550 seconds.

Example

```
> ip arp accept status
Accept illegal source mac arp: disable

Accept illegal dest mac arp: disable

Accept VRRP mac into arp table: disable
> ip arp status
[ARP Table]
Index IP Address      MAC Address          HOST ID              Interface  VLAN  Port
  1   192.168.1.9       60-A4-4C-E6-5A-4F   LAN1                 ---     P1
  2   192.168.1.11     00-1D-AA-0C-CD-08   LAN1                 ---     P3
>
```

Telnet Command: ip dhcpc

This command is available for WAN DHCP.

Syntax

`ip dhcpc option`

`ip dhcpc option -h/l`

`ip dhcpc option -d <idx>`

`ip dhcpc option -e<1 or 0> -w <wan unumber> -c <option number> -v <option value>`

`ip dhcpc option -e <1 or 0> -w <wan unumber> -c <option number> -x "<option value>"`

`ip dhcpc option -e <1 or 0> -w <wan unumber> -c <option number> -a "<option value>"`

`ip dhcpc option -u <idx unumber>`

`ip dhcpc release <wan number>`

`ip dhcpc renew <wan number>`

`ip dhcpc status`

Syntax Description

Parameter	Description
<i>option</i>	It is an optional setting for DHCP server. -a: set option value by address list -c: set option number: 0~255 -d: delete custom dhcp client option by index number -e: enable/disable option feature, 1:enable, 0:disable -h: display usage -l: list all custom set DHCP options -u: update by idx number -v: set option value by string -w: set wan number -x: set option value by raw byte (hex) -r: remove all custom DHCP Client options
<i>release <wan number></i>	It means to release current WAN IP address.

	<wan number>: 1 to 6.
<i>renew <wan number></i>	It means to renew the WAN IP address and obtain another new one. <wan number>: 1 to 6.
<i>status</i>	It displays current status of DHCP client.

Example

```
>ip dhcp status
=====
WAN1:

DHCP Client Status: None active DHCP client!

=====
WAN2:

DHCP Client Status: None active DHCP client!

=====
WAN3:

DHCP Client Status: None active DHCP client!

=====
WAN4: <Virtual WAN>

DHCP Client Status: None active DHCP client!

=====
WAN5: <Virtual WAN>

DHCP Client Status: None active DHCP client!

=====
WAN6: <Virtual WAN>

DHCP Client Status: None active DHCP client!
```

Telnet Command: ip ping

This command allows users to ping IP address of WAN1/WAN2/PVC3/PVC4/PVC5 for verifying if the WAN connection is OK or not.

Syntax

ip ping <IP address> <AUTO/WAN1/PVC3/PVC4/PVC5> <Source IP address>

Syntax Description

Parameter	Description
<i>IP address</i>	It means the WAN IP address.
<i>AUTO/WAN1/PVC3/PVC4/PVC5</i>	It means the WAN port /PVC that the above IP address passes through.

Example

```
>ip ping 172.16.3.229 WAN1
Pinging 172.16.3.229 with 64 bytes of Data:
Receive reply from 172.16.3.229, time=0ms
Receive reply from 172.16.3.229, time=0ms
```

```
Receive reply from 172.16.3.229, time=0ms
Packets: Sent = 5, Received = 5, Lost = 0 <0% loss>
```

Telnet Command: ip tracert

This command allows users to trace the routes from the router to the host.

Syntax

```
ip tracert <Host/IP address> <WAN1/WAN3> <Udp/Icmp>
```

Syntax Description

Parameter	Description
<i>Host/IP address</i>	It means the target IP address / host.
<i>WAN1/WAN3</i>	It means the WAN port that the above IP address passes through.
<i>Udp/Icmp</i>	It means the UDP or ICMP.

Example

```
>ip tracert 22.128.2.62 WAN1
Traceroute to 22.128.2.62, 30 hops max
 1  172.16.3.7  10ms
 2  172.16.1.2  10ms
 3  Request Time out.
 4  168.95.90.66 50ms
 5  211.22.38.134 50ms
 6  220.128.2.62 50ms
Trace complete
```

Telnet Command: ip telnet

This command allows users to access specified device by telnet.

Syntax

```
ip telnet <IP address><Port>
```

Syntax Description

Parameter	Description
<i>IP address</i>	Enter the WAN or LAN IP address of the remote device.
<i>Port</i>	Type a port number (e.g., 23). Available settings: 0 ~65535.

Example

```
> ip telnet 172.17.3.252 23
>
```

Telnet Command: ip rip

This command allows users to set the RIP (routing information protocol) of IP.

Syntax

ip rip <0/1/2>

Syntax Description

Parameter	Description
0/1/2	0 means disable. 1 means LAN1. 2 means IP Routed.

Example

```
> ip rip 1
%% Set RIP LAN1.
```

Telnet Command: ip wanrip

This command allows users to set the RIP (routing information protocol) of WAN IP.

Syntax

ip wanrip <ifno> -e <0/1>

Syntax Description

Parameter	Description
ifno	It means the connection interface. 1: WAN1, 3: PVC3,4: PVC4,5: PVC5 Note: PVC3 -PVC5 are virtual WANs.
-e <0/1>	It means to disable or enable RIP setting for specified WAN interface. 1: Enable the function of setting RIP of WAN IP. 0: Disable the function.

Example

```
> ip wanrip ?
Valid ex:ip wanrip <ifno> -e <0/1>
<ifno> 1: WAN1
       3: PVC3,4: PVC4,5: PVC5
-e <0/1> 0: disable, 1: enable
Now status:
WAN[1] Rip Protocol disable
WAN[3] Rip Protocol disable
WAN[4] Rip Protocol disable
WAN[5] Rip Protocol disable
WAN[6] Rip Protocol enable
WAN[7] Rip Protocol enable
WAN[8] Rip Protocol enable
WAN[9] Rip Protocol enable
WAN[10] Rip Protocol enable
> ip wanrip 5 -e 1
> ip wanrip ?
```

```
Valid ex:ip wanrip <ifno> -e <0/1>
<ifno> 1: WAN1
      3: PVC3,4: PVC4,5: PVC5
-e <0/1> 0: disable, 1: enable
Now status:
WAN[1] Rip Protocol disable
WAN[3] Rip Protocol disable
WAN[4] Rip Protocol disable
WAN[5] Rip Protocol enable
WAN[6] Rip Protocol enable
WAN[7] Rip Protocol enable
WAN[8] Rip Protocol enable
WAN[9] Rip Protocol enable
WAN[10] Rip Protocol enable
```

Telnet Command: ip route

This command allows users to set static route.

Syntax

```
ip route add <dst> <netmask> <gateway> <ifno> <rtype>
```

```
ip route del <dst> <netmask> <rtype>
```

```
ip route status
```

```
ip route cnc
```

```
ip route default <off/?>
```

```
ip route clean <1/0>
```

Syntax Description

Parameter	Description
<i>dd</i> <dst> <netmask> <gateway> <ifno> <rtype>	It means to add an IP address as static route. <dst>: Set the IP address of the destination. <netmask>: Set the netmask of the specified IP address. <gateway>: Set the gateway of the connected router. <ifno>: Enter the connection interface. In which, 3 means WAN1. <rtype>: Set the type (default or static) of the route. In which, default : default route; static: static route.
<i>del</i> <dst> <netmask> <rtype>	It means to delete specified IP address. <dst>: Set the IP address of the destination. <netmask>: Set the netmask of the specified IP address. <rtype>: Set the type (default or static) of the route. In which, default : default route; static: static route.
<i>status</i>	It means current status of static route.
<i>cnc</i>	It means current IP range for CNC Network.
<i>default</i> <off/?>	Set current default route.
<i>clean</i> <1/0>	Clean all of the route settings. 1: Enable the function. 0: Disable the function.

Example

```
> ip route add 172.16.2.0 255.255.255.0 172.16.2.4 3 static
> ip route status

Codes: C - connected, S - static, R - RIP, * - default, ~ - private
C~      192.168.1.0/ 255.255.255.0 is directly connected, LAN1
S       172.16.2.0/ 255.255.255.0 via 172.16.2.4, WAN1
```

Telnet Command: ip igmp_proxy

This command allows users to enable/disable igmp proxy server.

Syntax

```
ip igmp_proxy set
ip igmp_proxy reset
ip igmp_proxy wan
ip igmp_proxy t_home <on/off/show/help>
ip igmp_proxy query
ip igmp_proxy ppp <0/1>
ip igmp_proxy status
ip igmp_proxy version <v2/v3/auto/show>
ip igmp_proxy syslog <0/1>
```

Syntax Description

Parameter	Description
<i>set</i>	It means to enable proxy server.
<i>reset</i>	It means to disable proxy server.
<i>wan</i>	It means to specify WAN interface for IGMP service.
<i>t_home</i>	It means to specify t_home proxy server for using.
<i>On/off/show/help</i>	It means to turn on/off/display or get more information of the T_home service.
<i>query</i>	It means to set IGMP general query interval. The default value is 125000 ms.
<i>ppp</i>	0 - No need to set IGMP with PPP header. 1 - Set IGMP with PPP header.
<i>status</i>	It means to display current status for proxy server.
<i>version <v2/v3/auto/show></i>	It means to set IGMP version fixed on v2 or v3.
<i>syslog [0/1]</i>	It means to set IGMP syslog. 0: disable 1: enable

Example

```
> ip igmp_proxy query 130000
This command is for setting IGMP General Query Interval
The default value is 125000 ms
Current Setting is:130000 ms
>
```

Telnet Command: ip igmp_snoop

This command allows users to enable or disable IGMP snoop function.

Syntax

```
ip igmp_snoop enable
ip igmp_snoop disable
ip igmp_snoop status
ip igmp_snoop hw_acc <on/off/status>
ip igmp_snoop txquery <on/off> <v2/v3>
ip igmp_snoop chkleave <on/off>
ip igmp_snoop separate <on/off>
```

Syntax Description

Parameter	Description
<i>enable</i>	It means to enable igmp snoop function
<i>disable</i>	It means to disable igmp snoop function.
<i>status</i>	It means to display current igmp configuration.
<i>hw_acc</i> <on/off/status>	It means to set (on/off) or display the HW acceleration setting for IGMP Snoop.
<i>txquery</i> <on/off> <v2/v3>	It means to send out IGMP QUERY to LAN periodically. On: enable Off: disable v2: version v2 v3: version v3
<i>chkleave</i> <on/off>	It means to check the leave status. On: enable the IGMP snoop leave checking function. Off: it will drop LEAVE if still clients on the same group.
<i>separate</i> <on/off>	It means to set IGMP packets being separated by NAT/Bridge. On: The packets will be separated. Off: The packets will not be separated by NAT/Bridge.

Example

```
> ip igmp_snoop enable
%% ip igmp snooping [enable|disable|status], IGMP Snooping is Enabled.
> ip igmp_snoop disable
%% ip igmp snooping [enable|disable|status], IGMP Snooping is Disabled.
> ip igmp_snoop separate ?
% ip igmp separate [on/off]
  igmp snoop seprate is ON now.
  igmp packets will be separated by NAT/Bridge.
```

Telnet Command: ip igmp_fl

This command allows users to enable or disable IGMP Fast Leave function.

Syntax

```
ip igmp_fl enable
ip igmp_fl disable
ip igmp_fl status
```

Syntax Description

Parameter	Description
<i>enable</i>	It means to enable IGMP Fast Leave function

<i>disable</i>	It means to disable IGMP Fast Leave function.
<i>status</i>	It means to display current IGMP Fast Leave configuration.

Example

```
>ip igmp_fl enable
%% ip igmp_fl [enable|disable|status], IGMP Fast Leave is Enabled.
>
```

Telnet Command: ip session

This command allows users to set maximum session limit number for the specified IP; set message for exceeding session limit and set how many seconds the IP session block works.

Syntax

```
ip session on
ip session off
ip session default <num>
ip session defaultp2p <num>
ip session status
ip session show
ip session timer <num>
ip session <block/unblock> <IP>
ip session <add/del> <IP1-IP2> <num> <p2pnum>
```

Syntax Description

Parameter	Description
<i>on</i>	It means to turn on session limit for each IP.
<i>off</i>	It means to turn off session limit for each IP.
<i>default</i> <num>	It means to set the default number of session num limit.
<i>defaultp2p</i> <num>	It means to set the default number of session num limit for p2p.
<i>status</i>	It means to display the current settings.
<i>show</i>	It means to display all session limit settings in the IP range.
<i>timer</i> <num>	It means to set when the IP session block works. The unit is second.
<block/unblock> <IP>	It means to block/unblock the specified IP address. Block: The IP cannot access Internet through the router. Unblock: The specified IP can access Internet through the router.
<add/del> <IP1-IP2> <num> <p2pnum>	It means to add / delete the session limits in an IP range. <IP1-IP2> - Set the range of IP address specified for this command. <num> - Set the number of the session limits, e.g., 100. <p2pnum> - Set the number of the session limits, e.g., 50 for P2P.

Example

```
> ip session default 100
> ip session add 192.168.1.5-192.168.1.100 100 50
```

```

> ip session on
> ip session status

IP range:
  192.168.1.5 - 192.168.1.100 : 100

Current ip session limit is turn on

Current default session number is 100

```

Telnet Command: ip bandwidth

This command allows users to set maximum bandwidth limit number for the specified IP.

Syntax

`ip bandwidth on`

`ip bandwidth off`

`ip bandwidth default <tx_rate> <rx_rate>`

`ip bandwidth status`

`ip bandwidth routing <on/off>`

`ip bandwidth schedule <s1> <s2> <s3> <s4>`

`ip bandwidth show`

`ip bandwidth <add/del> <IP1-IP2> <tx> <rx> <shared>`

Syntax Description

Parameter	Description
<i>on</i>	It means to turn on the IP bandwidth limit.
<i>off</i>	It means to turn off the IP bandwidth limit.
<i>default</i> <tx_rate> <rx_rate>	It means to set default tx and rx rate of bandwidth limit. The range is from 0 - 65535 Kpbs.
<i>status</i>	It means to display the current settings.
<i>routing</i> <on/off>	It means to apply to IP Routed Subnet. On: apply to Off: not apply to
<i>schedule</i> <s1> <s2> <s3> <s4>	It means to set the scheduel profile(s) (0 to 16). Up to 4 profiles can be specified at one time.
<i>show</i>	It means to display all the bandwidth limits settings within the IP range.
<add/del> <IP1-IP2> <tx> <rx> <shared>	It means to add / delete the bandwidth within the IP range. <IP1-IP2>: Set the range of IP address specified for this command. <tx>: Set transmission rate for bandwidth limit. <rx>: Set receiving rate for bandwidth limit. <shared>: Set the bandwidth will be shared for the IP range.

Example

```

> ip bandwidth default 200 800
> ip bandwidth add 192.168.1.50-192.168.1.100 10 60
> ip bandwidth status
> ip bandwidth routing on

```

```
> ip bandwidth schedule 1
```

Telnet Command: ip dataflowmonitor

This command allows users to set data flow monitor mechanism.

Syntax

```
ip dataflowmonitor on
```

```
ip dataflowmonitor off
```

```
ip dataflowmonitor status
```

Syntax Description

Parameter	Description
<i>on</i>	It means to enable the data flow monitor.
<i>off</i>	It means to disable the data flow monitor.
<i>status</i>	It means to show the status of data flow monitor.

Example

```
> ip dataflowmonitor on
Enable Data Flow Monitor.
>
```

Telnet Command: ip bindmac

This command allows users to set IP-MAC binding for LAN host.

Syntax

```
ip bindmac on
```

```
ip bindmac off
```

```
ip bindmac strict_on
```

```
ip bindmac strict_off
```

```
ip bindmac add <IP> <MAC> <Comment>
```

```
ip bindmac del <IP>/all
```

```
ip bindmac subnet <all/set LAN_Index/unset LAN_Index/clear/show>
```

```
ip bindmac show
```

Syntax Description

Parameter	Description
<i>on</i>	It means to turn on IP bindmac policy. Even the IP is not in the policy table, it can still access into network.
<i>off</i>	It means to turn off all the bindmac policy.
<i>strict_on</i>	It means that only those IP address in IP bindmac policy table can access into network.
<i>strict_off</i>	It means to turn off IP bindmac policy.
<i>show</i>	It means to display the IP address and MAC address of the pair of

	binded one.
<i>add <IP> <MAC> <Comment></i>	It means to add one ip bindmac. <IP>: Enter the IP address for binding with specified MAC address. <MAC>: Enter the MAC address for binding with the IP address specified. <Comment>: Enter words as a brief description.
<i>del <IP> <all></i>	It means to delete one ip bindmac. <IP>: Enter the IP address for binding with specified MAC address. <all>: Delete all the IP bindmac settings.
<i>subnet <all/>set LAN_Index/unset LAN_Index/clear/show></i>	It means to set LAN subnet to bind strict mode. <all>: Set all LAN subnets to bind strict mode. <set LAN_Index>: Enable the subnet setting by specify the index number of LAN subnet. <unset LAN_Index>: Disable the subnet setting by specify the index number of LAN subnet. Clear: Clear the settings. Show: Display the setting.

Example

```
> ip bindmac add 192.168.1.46 00:50:7f:22:33:55 just for test
> ip bindmac show
ip bind mac function is turned OFF
ip bind mac function is STRICT OFF
Show all IP Bind MAC entries.
IP : 192.168.1.46 bind MAC : 00-50-7f-22-33-55 HOST ID :
  Comment : just
>
```

Telnet Command: ip maxnatuser

This command is used to set the maximum number of NAT users.

Syntax

ip maxnatuser *user no*

Syntax Description

Parameter	Description
<i>User no</i>	A number specified here means the total NAT users that Vigor router supports. 0 - It means no limitation.

Example

```
> ip maxnatuser 100
% Max NAT user = 100
```

Telnet Command: ip policy_rt

This command is used to set the IP policy route profile.

Syntax

ip policy_rt [-<command> <parameter> | ...]

Syntax Description

Parameter	Description
<command><parameter>[...]	The available commands with parameters are listed below. [...] means that you can Enter several commands in one line.
General Setup for Policy Route	
-i <value>	Specify an index number for setting policy route profile. Value: 1 to 60. "-1" means to get a free policy index automatically.
-e <0/1>	0: Disable the selected policy route profile. 1: Enable the selected policy route profile.
-o <value>	Determine the operation of the policy route. Value: add - Create a new policy route profile. del - Remove an existed policy route profile. edit - Modify an existed policy route profile. flush - Reset policy route to default setting.
-1 <any/range>	Specify the source IP mode. Range: Indicate a range of IP addresses. Any: It means any IP address will be treated as source IP address.
-2 <any/ip_range/ip_subnet/domain>	Specify the destination IP mode. Any: No need to specify an IP address for any IP address will be treated as destination IP address. ip_range: Indicates a range of IP addresses. ip_subnet: Indicates the IP subnet. domain: Indicates the domain name.

<i>-3 <any/range></i>	Specify the destination port mode. Range: Indicate a range of port number. Any: It means any port number can be used as destination port.
<i>-G <default/specific></i>	Specify the gateway mode.
<i>-L <default/specific></i>	Specify the failover gateway mode.
<i>-s <value></i>	Indicate the source IP start. Value: The type format shall be "xxx.xxx.xxx.xxx". (e.g, 192.168.1.0)
<i>-S <value></i>	Indicate the source IP end. Value: The type format shall be "xxx.xxx.xxx.xxx". (e.g, 192.168.1.100)
<i>-d <value></i>	Indicate the destination IP start. Value: The type format shall be "xxx.xxx.xxx.xxx". (e.g, 192.168.2.0)
<i>-D <value></i>	Indicate the destination IP end. Value: The type format shall be "xxx.xxx.xxx.xxx". (e.g, 192.168.2.100)
<i>-p <value></i>	Indicate the destination port start. Value: Type a number (1 ~ 65535) as the port start (e.g., 1000).
<i>-P <value></i>	Indicate the destination port end. Value: Type a number (1 ~ 65535) as the port end (e.g., 2000).
<i>-y <value></i>	Indicate the priority of the policy route profile. Value: Type a number (0 ~ 250). The default value is "150".
<i>-I <value></i>	Indicate the interface specified for the policy route profile. Value: Available interfaces include, LAN1 ~ LAN8, IP_Routed_Subnet, DMZ_Subnet, WAN1 ~ WAN3, VPN_PROFILE_1 ~ VPN_PROFILE_32, WAN_1_IP_ALIAS_1 ~ WAN_2_IP_ALIAS_8
<i>-g <value></i>	Indicate the gateway IP address. Value: The type format shall be "xxx.xxx.xxx.xxx". (e.g, 192.168.3.1)
<i>-l <value></i>	Indicate the failover IP address. Value: The type format shall be "xxx.xxx.xxx.xxx". (e.g, 192.168.4.1)
<i>-t <value></i>	It means "protocol". Value: Available settings include "TCP", "UDP", "TCP/UDP", "ICMP" and "Any".
<i>-n <0/1></i>	Indicates the function of "Force NAT". 0: Disable the function. 1: Enable the function.
<i>-a <0/1></i>	Indicates to enable the function of failover. 0: Disable the function. 1: Enable the function.
<i>-f <value></i>	It means to specify the interface for failover. Value: Available interfaces include, NO_FAILOVER, Default_WAN, Policy1 ~ Policy30 LAN1 ~ LAN8 IP_Routed_Subnet, DMZ_Subnet, WAN1 ~ WAN3,

	VPN_PROFILE_1 ~ VPN_PROFILE_32, WAN_1_IP_ALIAS_1 ~ WAN_2_IP_ALIAS_8
-b <value>	It means "failback". Value: Available settings include, 0: Disable the function of "failback". 1: Enable the function of "failback".
-V	It means to display non-default settings.
Diagnose for Policy Route	
-s <value>	It means "source IP". Value: Available settings include: Any: It indicates any IP address can be used as source IP address. "xxx.xxx.xxx.xxx": The type format (e.g, 192.168.1.0).
-d <value>	It means "destination IP". Value : Available settings include: Any: It indicates any IP address can be used as destination IP address. "xxx.xxx.xxx.xxx": Specify an IP address.
-p <value>	It means "destination port". Value: Specify a number or type Any (indicating any number).
-t <value>	It means "protocol". Value: Available settings include "ICMP", "TCP", "UDP" and "Any".

Example

```
> ip policy_rt diagnose -s 192.168.1.100 -d any -p any -t ICMP

-----
      Matched Route (Priority)
-----
* No_Match

-----
      Matched Policy (Priority)
-----
* Policy_1 (200)

* Conclusion:The packet was dropped because the send-to interface of the
matched policy "policy 1" was inactive and there was no failover setting
> ip policy_rt -i -1 -o add -1 range -s 192.168.1.10 -S 192.168.1.20 -2
ip_range -d 202.211.100.10 -D 202.211.100.20 -g 202.211.100.1 -I WAN2
```

Telnet Command: ip lanDNSRes

This command is used to set LAN DNS profiles. With such feature, the user can configure some services (such as ftp, www or database) with domain name which is easy to be accessed.

Syntax

```
ip lanDNSRes [-<command> <parameter> | ... ]
```

Syntax Description

Parameter	Description
-a <IP Address>	It is used to configure IP address mapping (IPv4/IPv6 Address or

	multiple subnet addresses). IP Address: type the IP address (e.g., 192.168.1.56).
<code>-c <CNAME></code>	It is used to set CNAME. CNAME: Enter a string.
<code>-d <address mapping index number></code>	It means to delete index number with address mapping configured. address mapping index number : type the index number which represents the address mapping profile.
<code>-e <0/1></code>	It means to enable or disable the function of LAN DNS or DNS Forwarding Profile. 0: disable 1: enable
<code>-i <profile setting index number></code>	It means to create LAN DNS profile with specified domain name. profile setting index number : type the index number which represents the profile with domain name configured.
<code>-l</code>	It means to list detailed information of profile configuration.
<code>-n <domain name></code>	It means to specify a domain name to be accessed.
<code>-p <profile name></code>	It means to set name of the LAN DNS profile.
<code>-r</code>	It means to clear specified domain name profile and the address mapping setting.
<code>-R</code>	It means to set to factory default setting.
<code>-s <0/1></code>	It means to determine all subnet packets or only the packets with the same subnet will be replied for address mapping profile. 0: reply all subnet packets. 1: reply only same subnet packet.
<code>-z</code>	It means to update LAN DNS configuration to DNS cache.

Example

```

> ip lanDNSRes -i 1 -n ftp.drayTek.com
% Configure Set1's DomainName:ftp.drayTek.com
> ip lanDNSRes -i 1 -a 172.16.2.10 -s 1
% Configure Set1's IP:172.16.2.10
% Configure Set1's Idx:1 ReplyOnlySameSubnet:Yes
> ip lanDNSRes -i 1 -l
% Idx: 1
% State: Disable
% Profile:
% Domain Name: ftp.drayTek.com
% ----- Address Mapping Table -----
% Idx ReplyOnlySameSubnet IP Address
% 1 Yes 172.16.2.10

```

Telnet Command: ip dnsforward

This command is used to set LAN DNS profile for conditional DNS forwarding.

`ip dnsforward [-<command> <parameter> | ...]`

Syntax Description

Parameter	Description
-----------	-------------

<i>[<command> <parameter> ...]</i>	The available commands with parameters are listed below. [...] means that you can Enter several commands in one line.
<i>-a <IP Address/Domain Name></i>	Set forwarded DNS server IP Address or domain name. <IP Address/Domain Name>: Enter an IP address or the domain name.
<i>-d <DNS server mapping index number></i>	Delete the selected LAN DNS profile. <DNS server mapping index number>: Enter the index number.
<i>-e <0/1></i>	0: disable this function. 1: enable this function.
<i>-i <profile setting index number></i>	Type the index number of the profile. <profile setting index number>: Enter the index number.
<i>-l</i>	List the content of LAN DNS profile (including domain name, IP address and message).
<i>-n <domain name></i>	Set domain name.
<i>-p <profile name></i>	Set profile name for LAN DNS.
<i>-r</i>	Reset the settings for selected profile.

Example

```

> ip dnsforward -i 1 -n ftp.drayTek.com
% Configure Set1's DomainName:ftp.drayTek.com
> ip dnsforward -i 1 -a 172.16.1.1
% Configure Set1's IP:172.16.1.1
> ip dnsforward -i 1 -l
% Idx: 1
% State: Disable
% Profile: test
% Domain Name: ftp.drayTek.com
% DNS Server IP: 172.16.1.1
>

```

Telnet Command: ip spoofdef

This command is used to enable/disable the IP Spoofing Defense.

Syntax

`ip spoofdef <WAN/LAN> <0/1>`

Syntax Description

Parameter	Description
<i><WAN/LAN></i>	It means to block IP packet from WAN/LAN with inconsistent source IP address.
<i><0/1></i>	0: Disable the function. 1: Enable the funciton.

Example

```
> ip spoofdef WAN 1
Setting saved:
>
```

Telnet Command: ip6 addr

This command allows users to set the IPv6 address for your router.

Syntax

```
ip6 addr -s <prefix> <prefix-length> <LAN1/..LAN4/ WAN1/USB /VPN1/..VPN32>
```

```
ip6 addr -d <prefix> <prefix-length> <LAN1/..LAN4/ WAN1/USB /VPN1/..VPN32>
```

```
ip6 addr -a <LAN1/..LAN4/ WAN1 /USB /VPN1/..VPN32> -u
```

```
ip6 addr -v <LAN1/..LAN4/ WAN1/USB>
```

```
ip6 addr -t <old-prefix><old-prefix-length><new-prefix> <new-prefix-length>
<LAN1/..LAN4/ WAN1/USB>
```

```
ip6 addr -o <1/2>
```

```
ip6 addr -o 3 <prefix> <prefix-length> <WAN1/USB>
```

```
ip6 addr -l <prefix> <prefix-length> <LAN1/..LAN4>
```

```
ip6 addr <-p/-b> <prefix> <prefix-length> <WAN1/USB>
```

```
ip6 addr -x <LAN1/..LAN4>
```

```
ip6 addr -c <LAN1/..LAN4>
```

```
ip6 addr -e <type> < LAN1/..LAN4>
```

Syntax Description

Parameter	Description
<pre>-s <prefix> <prefix-length> <LAN1/..LAN4/ WAN1/USB /VPN1/..VPN32></pre>	<p>It means to add a static ipv6 address.</p> <p><prefix>: It means to enter the prefix number of IPv6 address.</p> <p><prefix-length>: It means to enter a fixed value as the length of the prefix.</p> <p><LAN1/..LAN4/ WAN1/USB /VPN1/..VPN32>: It means to specify LAN/WAN/USB/VPN interface for such address.</p>
<pre>-d <prefix> <prefix-length> <LAN1/..LAN4/ WAN1/USB /VPN1/..VPN32></pre>	<p>It means to delete an ipv6 address.</p> <p><prefix>: It means to enter the prefix number of IPv6 address.</p> <p><prefix-length>: It means to enter a fixed value as the length of the prefix.</p> <p><LAN1/..LAN4/ WAN1/USB /VPN1/..VPN32>: It means to specify LAN/WAN/USB/VPN interface for such address.</p>
<pre>-a <LAN1/..LAN4/ WAN1 /USB /VPN1/..VPN32> -u</pre>	<p>It means to show current address(es) status.</p> <p><LAN1/..LAN4/ WAN1/USB /VPN1/..VPN32>: It means to specify LAN/WAN/USB/VPN interface.</p> <p><-u>: It means to show unicast address only.</p>
<pre>-v <LAN1/..LAN4/ WAN1/USB></pre>	<p>It means to show prefix list status.</p>
<pre>-t <old-prefix><old-prefix-length><new-prefix> <new-prefix-length></pre>	<p>It means to update WAN static IPv6 address table.</p> <p><old-prefix>: It means to enter the prefix number of IPv6 address.</p> <p><old prefix-length>: It means to enter a fixed value as the length of the prefix.</p>

<code><LAN1/..LAN4/ WAN1/USB></code>	<p><code><new-prefix></code>: It means to enter the prefix number of IPv6 address.</p> <p><code><new-prefix-length></code>: It means to enter a fixed value as the length of the prefix.</p> <p><code><LAN1/..LAN4/ WAN1/USB></code>: It means to specify LAN/WAN/USB interface for such address.</p>
<code>-o <1/2></code>	<p><code><1></code>: It means to show old prefix list.</p> <p><code><2></code>: It means to send old prefix option by RA.</p>
<code>-o <3> <prefix> <prefix-length> <WAN1/USB></code>	<p><code><3></code>: It means to set old prefix.</p> <p><code><prefix></code>: It means to enter the prefix number of IPv6 address.</p> <p><code><prefix-length></code>: It means to enter a fixed value as the length of the prefix.</p> <p><code><WAN1/USB></code>: It means to specify a WAN/USB interface for such address.</p>
<code>-l <prefix> <prefix-length> <LAN1/..LAN8></code>	<p>It means to add a ULA.</p> <p><code><prefix></code>: It means to enter the prefix number of IPv6 address.</p> <p><code><prefix-length></code>: It means to enter a fixed value as the length of the prefix.</p> <p><code><LAN1/..LAN8></code>: It means to specify a LAN interface for such address.</p>
<code>-p/-b <prefix> <prefix-length> <WAN1/USB></code>	<p>It means to add/delete an prefix to/from prefix list.</p> <p>p: Add a prefix to a prefix list.</p> <p>b: Delete a prefix from a prefix list.</p> <p><code><prefix></code>: It means to enter the prefix number of IPv6 address.</p> <p><code><prefix-length></code>: It means to enter a fixed value as the length of the prefix.</p> <p><code><WAN1/ USB></code>: It means to specify a WAN/USB interface for such address.</p>
<code>-x <LAN1/..LAN4></code>	<p>It means to generate a ULA automatically.</p> <p><code><LAN1/..LAN4></code>: It means to specify a LAN interface.</p>
<code>-c <LAN1/..LAN4></code>	<p>It means to delete a ULA .</p> <p><code><LAN1/..LAN4></code>: It means to specify a LAN interface.</p>
<code>-e <type> <LAN1/..LAN4></code>	<p>It means to set ULA type.</p> <p><code><type></code>: 0, disable; 1, static; 2, auto</p> <p><code><LAN1/..LAN4></code>: It means to specify a LAN interface.</p>

Example

```

> ip6 addr -a
DMZ
Unicast Address:
FE80::1F3A:8877:4D37:BAFD/64 (Link)
Multicast Address:
FF02::1:FF00:0
FF02::1:FF37:BAFD
FF02::1
LAN4
Unicast Address:
FE80::1F3A:8877:4D37:BAFD/64 (Link)
Multicast Address:
FF02::1:FF00:0
FF02::1:FF37:BAFD
FF02::1
LAN3

```

```

Unicast Address:
  FE80::1F3A:8877:4D37:BAFD/64 (Link)
Multicast Address:
  FF02::1:FF00:0
  FF02::1:FF37:BAFD
  FF02::1
LAN2
Unicast Address:

  FE80::1F3A:8877:4D37:BAFD/64 (Link)
....

```

Telnet Command: ip6 dhcp req_opt

This command is used to configure option-request settings for DHCPv6 client.

Syntax

```
ip6 dhcp req_opt <LAN1/LAN2/.../LAN4/WAN1/USB> [-<command> <parameter>| ... ]
```

Syntax Description

Parameter	Description
<i>req_opt</i>	It means option-request.
<LAN1/LAN2/.../LAN4/WAN1/USB>	It means to specify LAN or WAN interface for such address.
[<command> <parameter> ...]	The available commands with parameters are listed below. [...] means that you can Enter several commands in one line.
-a	It means to show current DHCPv6 status.
-s	It means to ask the SIP.
-S	It means to ask the SIP name.
-d	It means to ask the DNS setting.
-D	It means to ask the DNS name.
-n	It means to ask NTP.
-i	It means to ask NIS.
-I	It means to ask NIS name.
-p	It means to ask NISP.
-P	It means to ask NISP name.
-b	It means to ask BCMCS.
-B	It means to ask BCMCS name.
-r	It means to ask refresh time.
<i>Parameter</i>	1: the parameter related to the request will be displayed. 0: the parameter related to the request will not be displayed.

Example

```

> ip6 dhcp req_opt WAN1 -S 1
> ip6 dhcp req_opt WAN1 -r 1
> ip6 dhcp req_opt WAN1 -a
% Interface WAN2 is set to request following DHCPv6 options:

```

```

%   sip name
%   dns
%   refresh time
>

```

Telnet Command: ip6 dhcp client

This command allows you to use DHCPv6 protocol to obtain IPv6 address from server.

Syntax

`ip6 dhcp client <WAN1/USB> [-<command> <parameter>| ...]`

Syntax Description

Parameter	Description
<i>client</i>	It means the dhcp client settings.
[<command> <parameter> ...]	The available commands with parameters are listed below. [...] means that you can Enter several commands in one line.
-a	It means to show current DHCPv6 status.
-p <IAID>	It means to request identity association ID for Prefix Delegation.
-n <IAID>	It means to request identity association ID for Non-temporary Address.
-t <time>	It means to set solicit interval. <time>: 0 ~ 7 seconds (default value is 0).
-c <parameter>	It means to send rapid commit to server. 1: Enable 0: Disable
-i <parameter>	It means to send information request to server. 1: Enable 0: Disable
-e <parameter>	It means to enable or disable the DHCPv6 client. 1: Enable 0: Disable
-m <parameter>	It means to enable/disable server DUID set by Link layer and time. 1: Enable 0: Disable
-d	It means to display the client DUID.
-A <parameter>	It means to set authentication protocol. 0: Undefined 2: delayed protocol
-R <parameter>	It means to set realm value (max: 31 characters) in delayed protocol. <parameter>: Enter a string.
-S <parameter>	It means to set shared secret (max: 31 characters) in delayed protocol. <parameter>: Enter a string.
-K <parameter>	It means to set key ID (1~65535) in delayed protocol. <parameter>: Enter a number.

Example

```

> ip6 dhcp client WAN1 -d
Client DUID = 000300011449bc0a8ab9
> ip6 dhcp client WAN1 -a
Interface WAN1 has following DHCPv6 client settings:
    DHCPv6 client enabled
    request IA_PD whose IAID equals to 2008
> system reboot

```

Telnet Command: ip6 dhcp server

This command allows you to configure DHCPv6 server.

Syntax

`ip6 dhcp server [-<command> <parameter>| ...]`

Syntax Description

Parameter	Description
<i>server</i>	It means the dhcp server settings.
<i>[<command> <parameter> ...]</i>	The available commands with parameters are listed below. [...] means that you can Enter several commands in one line.
<i>-l</i>	It means to clear the DHCPv6 table.
<i>-a</i>	It means to show current DHCPv6 status.
<i>-b</i>	It means to show current DHCPv6 IP assignment table.
<i>-n <name></i>	It means to set a pool name.
<i>-c <parameter></i>	It means to send rapid commit to server. 1: Enable 0: Disable
<i>-e <parameter></i>	It means to enable or disable the DHCPv6 server. 1: Enable 0: Disable
<i>-t <time></i>	It means to set prefer lifetime.
<i>-y <time></i>	It means to set valid lifetime.
<i>-u <time></i>	It means to set T1 time.
<i>-o <time></i>	It means to set T2 time.
<i>-i <pool_min_addr></i>	It means to set the start IPv6 address of the address pool.
<i>-x <pool_max_addr></i>	It means to set the end IPv6 address of the address pool.
<i>-R</i>	It means to send reconfigure packet to the client.
<i>-r <0/1></i>	It means to disable (0) or enable (1) the auto range.
<i>-N <0/1></i>	It means to disable (0) or enable (1) the random address allocation.
<i>-d <addr></i>	It means to set the first DNS IPv6 address. <addr> : Enter an IPv6 address.
<i>-D <addr></i>	It means to set the second DNS IPv6 address. <addr> : Enter an IPv6 address.

<code>-m <1/0></code>	It means to enable(1) or disable (0) the server DUID set by Link Layer and Time.
<code>-q <name></code>	It means to set DNS domain search list. <name>: Enter a name.
<code>-z <0/1></code>	It means to disable (0) or enable (1) the DHCP PD.
<code>pdadd <suffix> <prefix_len> <client linklocal><client DUID></code>	It means to add PD node.
<code>pddel <PD index></code>	It means to delete PD node. <PD index>: Enter a number.
<code>-A <parameter></code>	It means to set authentication protocol. <parameter>: Enter 0, 2 or 3. 0: Undefine 2: delayed protocol 3: Reconfigure key
<code>-M <parameter></code>	It means to set realm value (max: 31 characters) in delayed protocol. <parameter>: Enter a string.
<code>-S <parameter></code>	It means to set shared secret (max: 31 characters) in delayed protocol. <parameter>: Enter a string.
<code>-K <parameter></code>	It means to set key ID (1~65535) in delayed protocol. <parameter>: Enter a number.

Example

```
> ip6 dhcp server LAN1 pdadd 11:22:33 64 fe80::e202:1bff:fe65:4084
000100011d2ce39a00e06f25c839
%      Add to PD list success!
%% PD status : invalid, no prefix available.
>
```

Telnet Command: ip6 internet

This command allows you to configure settings for accessing Internet.

Syntax

```
ip6 internet -W n -M n [-<command> <parameter> | ... ]
```

Syntax Description

Parameter	Description
<code>[-<command> <parameter> ...]</code>	The available commands with parameters are listed below. [...] means that you can Enter several commands in one line.
<code>-W n</code>	W means to set WAN interface and n means different selections. Default is WAN1. n=1: WAN1 n=2: WAN2 n=3: WAN3 . . n=X: WANx
<code>-M n</code>	M means to set Internet Access Mode (Mandatory) and n means

	different modes (represented by 0 - 5) n= 0: Offline, n=1: PPP, n=2: TSPC, n=3: AICCU, n=4: DHCPv6, n=5: Static n=6:6in4-Static n=7:6rd
<i>-m n</i>	It means to set IPv6 MTU. N = any value (0 means "unspecified").
<i>6rd</i>	
<i>-C <n></i>	It means to set 6rd connection mode. n=0: Auto n=1: Static
<i>-s <server></i>	It means to set 6rd IPv4 Border Relay. <server>: Enter a string.
<i>-m <n></i>	It means to set 6rd IPv4 address mask length. <n>: Enter a number.
<i>-p <prefix></i>	It means to set IPv6 prefix for 6rd connection. <prefix>: Enter a prefix number of IPv6 address.
<i>-l <n></i>	It means to set the prefix length for 6rd connection. <n>: It means to enter a fixed value as the length of the prefix.
<i>6in4</i>	
<i>-s <server></i>	It means to set 6in4 remote endpoint IPv4 address.
<i>-l <IPv6 Addr></i>	It means to set the IPv6 address for 6in4 connection.
<i>-P <n></i>	It means to set IPv6 WAN prefix length for 6in4 connection.
<i>-p <prefix></i>	It means to set 6in4 LAN Routed Prefix.
<i>-l <n></i>	It means to set 6in4 LAN Routed Prefix length.
<i>-T <n></i>	It means to set 6in4 Tunnel TTL.
<i>TSPC/AICCU</i>	
<i>-u <username></i>	It means to set username (max. 63 characters). <username>: Enter a string.
<i>-P <password></i>	It means to set Password (max. 63 characters). <password>: Enter a password.
<i>-s <server></i>	It means to set Tunnel Server IP. <server>: Enter an IPv4 Address or URL (max. 63 characters)
<i>AICCU</i>	
<i>-p <prefix></i>	It means to set Subnet Prefix (AICCU). <prefix>: Enter a prefix number of IPv6 address.
<i>-l <n></i>	It means to set Subnet Prefix length (AICCU). <n>: Enter a number.
<i>-o <1/0></i>	It means to set AICCU always on. 1: on 0: off
<i>-f</i>	It means to set AICCU tunnel ID.
<i>static</i>	

<code>-w <addr></code>	It means to set Default Gateway. <addr>: Enter an IPv6 address.
<i>Others</i>	
<code>-d <server></code>	It means to set 1st DNS Server IP. <server>: Enter an IPv6 address.
<code>-D <server></code>	It means to set 2nd DNS Server IP. <server>: Enter an IPv6 address.
<code>-t <dhcp/ra/none></code>	It means to set ipv6 PPP WAN test mode for DHCP or RA. <dhcp/ra/none> : Enter dhcp, ra or none.
<code>-V</code>	It means to view IPv6 Internet Access Profile.
<code>-k</code>	It means to dial the Tunnel on the WAN.
<code>-j</code>	It means to drop the Tunnel on the WAN.
<code>-r n</code>	It means to set Prefix State Machine RA timeout.
<code>-c n</code>	It means to set Prefix State Machine DHCPv6 Client timeout.
<code>-q <0/1/2></code>	It means to set WAN detection mode. 0:NS Detect 1:Ping Detect 2:Always On
<code>-z <value></code>	It means to set Ping Detect TTL (0-255). <value>: Enter 0-255.
<code>-x <hostname/ IPv6 addr></code>	It means to set Ping Detect Host (hostname or IPv6 address). <hostname/ipv6 addr> : Enter a hostname or an IPv6 address.
<code>-i <value></code>	It means to set ipv6 connection interval. <value>: Enter a number (1500-60000 (unit:10ms)).
<code>-b <0/1></code>	It means to enable DNSv6 based on DHCPv6. 1 = on 0 = off
<code>-R <0/1></code>	It means to Enable RIPng. 1 = on 0 = off

Example

```
> ip6 internet -W 1 -M 2 -u userid -p passwd -s broker.freenet6.net
This setting will take effect after rebooting.
Please use "sys reboot" command to reboot the router.
> system reboot
```

Telnet Command: ip6 neigh

This command allows you to display IPv6 neighbour table.

Syntax

```
ip6 neigh -s <inet6_addr> <eth_addr> <LAN1/..LAN4/ WAN1/ USB>
```

```
ip6 neigh -d <inet6_addr> <LAN1/..LAN4/ WAN1/ USB>
```

```
ip6 neigh -a <inet6_addr> <-N LAN1/..LAN4/ WAN1/ USB>
```

Syntax Description

Parameter	Description
<code>-s <inet6_addr> <eth_addr> <LAN1/..LAN4/ WAN1/ USB></code>	It means to add a neighbour. <inet6_addr>: Enter an IPv6 address. <eth_addr>: Enter a submask address. <LAN1/..LAN4/ WAN1/ USB>: Specify an interface for the neighbor.
<code>-d <inet6_addr> <LAN1/..LAN4/ WAN1/ USB></code>	It means to delete a neighbour. <inet6_addr>: Enter an IPv6 address. <LAN1/..LAN4/ WAN1/ USB>: Specify an interface for the neighbor.
<code>-a <inet6_addr> <-N LAN1/..LAN4/ WAN1/ USB></code>	It means to show neighbour status. <inet6_addr>: Enter an IPv6 address. <LAN1/..LAN4/ WAN1/ USB>: Specify an interface for the neighbor.

Example

```
> ip6 neigh -s 2001:2222:3333::1111 00:50:7F:11:ac:22:WAN1
      Neighbour 2001:2222:3333::1111 successfully added!
> ip6 neigh -a
I/F  ADDR                               MAC                               STATE
-----
LAN1  2001:2222:3333::1111                FAILED
LAN1  ::                                     NONE
>
```

Telnet Command: ip6 pneigh

This command allows you to add a proxy neighbour.

Syntax

```
ip6 pneigh -s <inet6_addr> <LAN1/..LAN4/ WAN1/ USB>
```

```
ip6 pneigh -d <inet6_addr> <LAN1/..LAN4/ WAN1/ USB>
```

```
ip6 pneigh -a <inet6_addr> <-N LAN1/..LAN4/ WAN1/ USB>
```

Syntax Description

Parameter	Description
<pre>-s <inet6_addr> <LAN1/..LAN4/WAN1/USB></pre>	It means to add a proxy neighbour. <inet6_addr>: Enter an IPv6 address. <LAN1/..LAN4/ WAN1/ USB>: Specify an interface for the proxy neighbor.
<pre>-d <inet6_addr> <LAN1/..LAN4/WAN1/USB></pre>	It means to delete a proxy neighbour. <inet6_addr>: Enter an IPv6 address. <LAN1/..LAN4/ WAN1/ USB>: Specify an interface for the proxy neighbor.
<pre>-a <inet6_addr> <-N LAN1/..LAN4/WAN1/USB></pre>	It means to show proxy neighbour status. <inet6_addr>: Enter an IPv6 address. <LAN1/..LAN4/ WAN1/ USB>: Specify an interface for the proxy neighbor.

Example

```
> ip6 neigh -s FE80::250:7FFF:FE12:300 LAN1
%      Neighbour FE80::250:7FFF:FE12:300 successfully added!
>
```

Telnet Command: ip6 route

This command allows you to IPv6 route policy.

Syntax

```
ip6 route -s <prefix> <prefix-length> <gateway> <LAN1/..LAN4/WAN1/ USB/VPN1/..VPN32> <-D>
```

```
ip6 route -d <prefix> <prefix-length>
```

```
ip6 route -a <LAN1/..LAN4/WAN1/ USB/VPN1/..VPN32>
```

```
ip6 route -/
```

Syntax Description

Parameter	Description
<pre>-s <prefix> <prefix-length> <gateway> <LAN1/..LAN4/WAN1/USB/VPN1/..VPN32> <-D></pre>	It means to add a route. <prefix>: It means to enter the prefix number of IPv6 address. <prefix length>: It means to enter a fixed value as the length of the prefix. <gateway>: It means to enter the gateway of the router. <LAN1/..LAN8/DMZ/WAN1/WAN2/ USB1/USB2/VPN1/..VPN32>: It means to specify LAN or WAN or VPN interface for such address. <-D>: It means that such route will be treated as the default route.

<code>-d <prefix> <prefix-length></code>	It means to delete a route. <prefix>: It means to enter the prefix number of IPv6 address. <prefix length>: It means to enter a fixed value as the length of the prefix.
<code>-a <LAN1/..LAN4/WAN1/USB/VPN1/..VPN32></code>	It means to show the route status. <LAN1/..LAN8/DMZ/WAN1/WAN2/ USB1/USB2/VPN1/..VPN32>: It means to specify LAN or WAN or VPN interface for such address.
<code>-/</code>	It means to clear the routing table.

Example

```
> ip6 route -s FE80::250:7FFF:FE12:500 16 FE80::250:7FFF:FE12:100 LAN1
%      Route FE80::250:7FFF:FE12:500/16 successfully added!
> ip6 route -a LAN1
PREFIX/PREFIX-LEN          I/F METRIC FLAG NEXT-HOP
-----
::0.0.0.1/128             LAN1    0 U  ::
FE80::/128                LAN1    0 U  ::
FE80::1F3A:8877:4D37:BAFD/128 LAN1    0 U  ::
FE80::/64                 LAN1   256 U  ::
FE80::/16                 LAN1  1024 UGS FE80::250:7FFF:FE12:100
FF00::/8                  LAN1   256 U  ::
>
```

Telnet Command: ip6 ping

This command allows you to ping an IPv6 address or a host.

Syntax

`ip6 ping <IPv6 address/host> [<LAN1/LAN2/.../LAN4/WAN1/USB>] <send count> <data_size(1-1452)>`

Syntax Description

Parameter	Description
<i>IPv6 address/Host</i>	It means to specify the IPv6 address or host for ping.
<i><LAN1/LAN2/.../LAN4/WAN1/USB></i>	It means to specify LAN or WAN interface for such address.

Example

```
> ip6 ping 2001:4860:4860::8888 WAN1
Pinging 2001:4860:4860::8888 with 64 bytes of Data:
Receive reply from 2001:4860:4860::8888, time=330ms
Receive reply from 2001:4860:4860::8888, time=330ms
Receive reply from 2001:4860:4860::8888, time=330ms
Receive reply from 2001:4860:4860::8888, time=330ms
Receive reply from 2001:4860:4860::8888, time=330ms

Packets: Sent = 5, Received = 5, Lost = 0 <% loss>
>
```

Telnet Command: ip6 tracert

This command allows you to trace the routes from the router to the host.

Syntax

```
ip6 tracert <IPv6 address/Host> [LAN1|LAN2|...|LAN4|WAN1|USB]]
```

Syntax Description

Parameter	Description
<i>IPv6 address/Host</i>	It means to specify the IPv6 address or host for ping.
<i><LAN1 ..LAN8/DMZ/WAN1/WAN2/USB1/USB2></i>	It means to specify an interface for such address.

Example

```
> ip6 tracert 2001:4860:4860::8888
traceroute to 2001:4860:4860::8888, 30 hops max through protocol ICMP
 1 2001:5C0:1400:B::10B8      340 ms
 2 2001:4DE0:1000:A22::1     330 ms
 3 2001:4DE0:A::1           330 ms
 4 2001:4DE0:1000:34::1     340 ms
 5 2001:7F8:1: :A501:5169:1 330 ms
 6 2001:4860::1:0:4B3       350 ms
 7 2001:4860::8:0:2DAF      330 ms
 8 2001:4860::2:0:66E      340 ms
 9 Request timed out.      *
10 2001:4860:4860::8888    350 ms
Trace complete.
>
```

Telnet Command: ip6 tpsc

This command allows you to display TSPC status.

Syntax

```
ip6 tpsc [ifno]
```

Syntax Description

Parameter	Description
<i>ifno</i>	It means the connection interface. Ifno=1 (means WAN1) Info=2 (means WAN2)

Example

```
DrayTek> ip6 tpsc 1
Tunnel Broker: broker.freenet6.net
Status: Idle
>
```

Telnet Command: ip6 radvd

This command allows you to enable or disable RADVD server.

Syntax

ip6 radvd <LAN1/..LAN4> <-<command> <parameter>/... >

Syntax Description

Parameter	Description
<<command> <parameter>/...>	The available commands with parameters are listed below. <...> means that you can Enter several commands in one line.
-s <0/1>	It means to enable or disable the default lifetime of the RADVD server. 1: Enable the RADVD server. 0: Disable the RADVD server.
-D <0/1/2>	It means to set RDNSS Disable/Enable/Deploy (0/1/2) when WAN is up.
-d <lifetme>	It means to set RA default lifetime.
-i <lifetme>	It means to set RA min interval time(sec).
-l <lifetme>	It means to set RA MAX interval time(sec).
-h <hoplimit>	It means to set RA hop limit.
-m <mtu/auto>	It means to set RA MTU, 1280-1500. mtu: auto - auto select MTU from WAN,
-e <time>	It means to set reachable time.
-a <time/infinity>	It means to set retransmit timer /infinity.
-p <0/1/2>	It means to set radvd default preference Low/Medium/High. 0-low 1-medium 2-high
-v	It means to view radvd configuration.
-V	It means to view setting in RA.
-L <time/infinity>	It means to set prefix valid lifetime.
-P <time/infinity>	It means to set prefix preferred lifetime.
-r <num>	It means to to set RA test for item. <num>: 0, 121, 124 0: default, 121: logo 121, 124: logo 124..
-R	It means to reload Config and send RA for subnets.
-u	It means to view MTU on all interfaces.

Example

```
> ip6 radvd LAN1 -s 1
% [LAN1] setting !
%   Enable LAN1 radvd OK!
> ip6 radvd LAN1 -d 1800
% [LAN1] setting !
```

```

% Set default lifetime ok: 1800 !
> ip6 radvd LAN1 -V
% [LAN1] setting !
% Default Lifetime : 0 seconds
% min interval time: 200 seconds
% MAX interval time: 600 seconds
% Hop limit : 64
% MTU : 1280
% Reachable time : 0
% Retransmit time : 0
% Preference : Medium
>

```

Telnet Command: ip6 mngt

This command allows you to manage the settings for access list.

Syntax

ip6 mngt list

ip6 mngt list [*add* <Index> <IPv6 Object Index> |*remove* <Index>|*flush*]

ip6 mngt status

ip6 mngt <internet/ http/telnet/ping/https/ssh/enforce_https> <on/off>

Syntax Description

Parameter	Description
<i>list</i>	It means to show the setting information of the access list.
<i>add</i> <Index> <IPv6 Object Index> <i>remove</i> <index> <i>flush</i> >	It means to add an IPv6 address which can be used to execute management through Internet. <Index>: 1 to 10. Ten profiles can be set for IPv6 access list. <IPv6 Object index>: It means the index number of IP object (1 to 64) or keyword object (1 to 200) . <i>remove</i> <Index>: It means to remove (delete) the specified IP/Keyword object.
<i>flush</i>	It means to clear the IPv6 access table.
<i>status</i>	It means to show the status of IPv6 remote management.
<i>internet/ http/telnet/ping/https/ssh /enforce_https</i>	These protocols are used for accessing Internet.
<i>on/off</i>	It means to enable (on) or disable (off) the Internet accessing through http/telnet/ping.

Example

```

> ip6 mngt list add 1 1
%% Set OK.
> ip6 mngt list
DrayTek> ip6 mngt list
% IPv6 Access List :
[Index] [IPv6 Object Index] [IPv6/Prefix Length or StartIPv6 ~ EndIPv6]
=====
  1          1          Please setting index=1 for IPv6 Object
> ip6 mngt status

```

```
internet access : off, telnet : off, http : off, https : off, ssh :
off, ping : off, enforce_https : off
```

Telnet Command: ip6 online

This command allows you to check the online status of IPv6 LAN /WAN.

Syntax

```
ip6 online <WAN1/USB>
```

Syntax Description

Parameter	Description
<WAN1/USB>	It means the connection interface.

Example

```
> ip6 online WAN1
% WAN1 online status :
% IPv6 WAN1 TSPC
% Default Gateway : ::
% Interface : DOWN
% UpTime : 00:00:00
% IPv6 DNS Server: :: Static
% IPv6 DNS Server: :: Static
% IPv6 DNS Server: :: Static
% Tx packets = 0, Tx bytes = 0, Rx packets = 0, Rx bytes = 0
% MTU Onlink: 1280 , Config MTU : 0
>
```

Telnet Command: ip6 aiccu

This command allows you to set IPv6 settings for WAN interface with connection type of AICCU.

Syntax

```
ip6 aiccu -i <ifno> -r
```

```
ip6 aiccu -i <ifno> -s
```

Syntax Description

Parameter	Description
<ifno>	It means the connection interface. 1=WAN1 2=WAN2
-r	It means to remove (delete) the specified index number with IPv6 settings.
-s	It means to display the AICCU status.

Example

```
> ip6 aiccu -i 1 -s
Status: Idle
>
```

Telnet Command: ip6 ntp

This command allows you to set IPv6 settings for NTP (Network Time Protocols) server.

Syntax

ip6 ntp -h

ip6 ntp -v

ip6 ntp -p <0/1>

Syntax Description

Parameter	Description
-h	It is used to display the usage of such command.
-v	It is used to show the NTP state.
-p <0/1>	It is used to specify NTP server for IPv6. 0 - Auto 1 - First Query IPv6 NTP Server.

Example

```
> ip6 ntp -p 1
% Set NTP Priority: IPv6 First
```

Telnet Command: ip6 lan

This command allows you to set IPv6 settings for LAN interface.

Syntax

ip6 lan -I n <-<l:w:d:D:m:o:s> <parameter> / ... >

Syntax Description

Parameter	Description
-h	It is used to display the usage of such command.
-I <n>	It means to selete LAN interface to be set. n= 1: LAN1 n= 2: LAN2, ... x: LANx. Default is LAN1
-w <n>	It means to selete WAN interface to be primary interface. n= 0: None, n=1: WAN1 , n=2: WAN2, ... x: WANx.
-d <server>	It means to set 1st DNS Server IP. <server>: Enter the IPv6 Address.
-D <server>	It means to set 2nd DNS Server IP. <server>: Enter the IPv6 Address.
-m <n>	It means to set ipv6 LAN management. n=0:OFF n=1:SLAAC. Default is SLAAC n=2:DHCPv6
-o <n>	It means to enable Other option(O-bit) flag. (O-bit is redundant when management is DHCPv6) n=0: Disable n=1: Enable.
-e <n>	It means to add an extension WAN.

	n: 1: WAN1, 2: WAN2, ... x: WANx.
-E <n>	It means to delete an extension WAN. n: 1: WAN1 ,2: WAN2, ... x: WANx.
-b <map>	It means to set bit map(decimal) for extension WAN. <map>: 0: WAN1; 1: WAN2, ... n: WAN(n+1).
-f <n>	It means to disable IPv6. n=1: Disable IPv6, n=0: Enable IPv6.
-R <n>	It means to enable /disable RIPng. n=1: Enable RIPng, n=0: Disable RIPng.
-s <n>	It means to show IPv6 LAN setting. n=0:show all. Default is show all. n=1 to 8: LAN1 to LAN4. n=9: DMZ.

Example

```

> ip6 lan -l 2 -w 1 -d 2001:4860:4860::8888 -o 1 -f 0 -s 2
%   Set LAN2!

%   Set primary WAN1!

%   Set 1st DNS server 2001:4860:4860::8888

%   Set Other Option Enable!

%   [LAN2] support ipv6!

This setting will take effect after rebooting.
Please use "sys reboot" command to reboot the router.

% [LAN2] setting:
% Primary WAN      : WAN1
% Management      : SLAAC
% Other Option     : Enable
% WAN Exten       : None
% Subnet ID       : 2
% Static IP(0)    : ::/0
%                  [ifno: 0, enable: 0]
% Static IP(1)    : ::/0
%                  [ifno: 0, enable: 0]
% Static IP(2)    : ::/0
%                  [ifno: 0, enable: 0]
% Static IP(3)    : ::/0
%                  [ifno: 0, enable: 0]
% DNS1            : 2001:4860:4860::8888
% DNS2            : 2001:4860:4860::8844
% ULA Type        : OFF
% RIPng           : Enable
>

```

Telnet Command: ip6 session

This command allows you to set sessions limit for IPv6 address.

Syntax

`ip6 session on`

`ip6 session off`

`ip6 session default <num>`

`ip6 session status`

`ip6 session show`

`ip6 session add <P1-IP2> <num>`

`ip6 session del <P1>/<all>`

Syntax Description

Parameter	Description
<code>on</code>	It means to turn on session limit for each IP.
<code>off</code>	It means to turn off session limit for each IP.
<code>default <num></code>	It means to set the default number of session num limit. <num>: Enter a number.
<code>status</code>	It means to display the current settings.
<code>show</code>	It means to display all IP range session limit settings.
<code>add <P1-IP2><num></code>	<add/del>: It means to add the session limit for an IPv6 range. <IP1-IP2> : Specify a range for IPv6 addresses. <num>: Enter a number.
<code>del<IP1> /all</code>	: It means to delete the session limit for an IPv6 range. <IP1> : Specify the first IPv6 address within the IPv6 range. all: Delete all the session limits.

Example

```
> ip6 session on
> ip6 session add 2100:ABCD::2-2100:ABCD::10 100
> ip6 session status

IPv6 range:
  2100:ABCD::2 - 2100:ABCD::10 : 100

Current ip6 session limit is turn on

Current default session number is 100
```

Telnet Command: ip6 bandwidth

This command allows you to set IPv6 settings for bandwidth control.

Syntax

`ip6 bandwidth on`

`ip6 bandwidth off`

`ip6 bandwidth default <tx_rate> <rx_rate>`

`ip6 bandwidth status`

`ip6 bandwidth show`

`ip6 bandwidth add <IP1-IP2> <tx><rx><shared>`

`ip6 bandwidth del <IP1-IP2> /all`

Syntax Description

Parameter	Description
<code>on</code>	It means to turn on bandwidth limit for each IP.
<code>off</code>	It means to turn off bandwidth limit for each IP.
<code>default <tx_rate> <rx_rate></code>	It means to set the default transmission (tx), receiving (rx) rate of bandwidth limit (0-30000 Kbps/Mbps). <tx_rate>: Enter a number. <rx_rate>: Enter a number.
<code>status</code>	It means to display the current settings.
<code>show</code>	It means to display all IP range bandwidth limit settings.
<code>add <IP1-IP2> <tx><rx><shared></code>	<add>: It means to add the bandwidth limit for an IPv6 range. : It means to delete the bandwidth limit for an IPv6 range by first IP (IP1) or 'del all'. <IP1-IP2> - Specify a range for IPv6 addresses. <tx><rx>: It means the bandwidth limit for transmission and receive rate. <shared>: It means the bandwidth will be shared for the IPv6 range.
<code>del <IP1-IP2> /all</code>	It means to delete the bandwidth limit for an IPv6 range by first IP (IP1) or 'del all'. <IP1-IP2> - Specify a range for IPv6 addresses. all: Delete all the bandwidth limits.

Example

```
> ip6 bandwidth on
> ip6 bandwidth add 2001:ABCD::2-2001:ABCD::10 512 5M shared
> ip6 bandwidth status
IPv6 range:
  2001:ABCD::2 - 2001:ABCD::10 : Tx:512K Rx:5M shared
Current ip6 Bandwidth limit is turn on
Current default ip6 Bandwidth rate is Tx:2000K Rx:8000K bps
>
```

Telnet Command: ipf view

IPF users to view the version of the IP filter, to view/set the log flag, to view the running IP filter rules.

Syntax

`ipf view [OPTION]`

Syntax Description

Parameter	Description
<code>-V</code>	It means to show the version of this IP filter.
<code>-d</code>	It means to show the running data filter rules.
<code>-h</code>	It means to show the hit-number of the filter rules.
<code>-r</code>	It means to show the running call and data filter rules.
<code>-t</code>	It means to display all the information at one time.
<code>-Z</code>	It means to clear a filter rule's statistics.
<code>-Z</code>	It means to clear IP filter's gross statistics.

Example

```
> ipf view -V
ipf: IP Filter: v3.3.1 (1852)
Kernel: IP Filter: v3.3.1
Running: yes
Log Flags: 0x6059749c = block, nomatch
Default: pass all, Logging: available
>
```

Telnet Command: ipf set

This command is used to set general rule, filter set and filter rule for firewall.

Syntax

`ipf set [Options]`

`ipf set <SET_NO><Options>`

`ipf set <SET_NO> rule <RULE_NO> <Options>`

Syntax Description

Parameter	Description
<code>ipf set [options]</code>	It means to set the firewall general setup and default rule.
<code>ipf set <SET_NO><Options></code>	It means to set the firewall filter set including comments and next filter set.
<code>ipf set <SET_NO> rule <RULE_NO> <Options></code>	It means to set the firewall rule in a filter set. For detailed information, refer to Telnet Command: ipf rule.
<i>About ipf set [options]</i>	
<code>-v</code>	It means to view the configuration of general set.
<code>-d <p1></code>	It means to setup Data Filter. <p1>: Specify the index number (1 to 12) of the set profile. To disable the setting, enter "0".

- <i>p</i> < <i>p1</i> > < <i>p2</i> >	<p>It means to setup actions for packet not matching any rule and whether record syslog.</p> <p><<i>p1</i>>: Type "0" to let packets not matching any rule pass; Type "1" to block the packets not matching any rule.</p> <p><<i>p2</i>>: "0" means the log related to rule matching will not be recorded on Syslog; "1" means the log related to rule matching will be recorded on Syslog.</p> <p>For example, to set pass for packet not matching any rule and enable syslog, <i>-p 0 1</i>.</p>
- <i>R</i> < <i>v4/v6</i> > < <i>Enable/Disable</i> >	<p>It means to accept routing packet from WAN.</p> <p><<i>v4/v6</i>>: IPv4 or IPv6.</p> <p><<i>Enable/Disable</i>>: Enter 0 (enable) or 1 (disable).</p> <p>Set Accept routing packet from WAN by IPv4, please enter <i>-R v4 0</i>.</p>
- <i>L</i> < <i>p1</i> >	<p>It means to enable or disable the Strict Security Firewall function.</p> <p><<i>p1</i>>: Enter 1(enable) or 0 (disable).</p>
- <i>C</i> < <i>p1</i> >	<p>It means to setup Code Page.</p> <p><<i>p1</i>>: Enter a code page number (0 to 20). For example, ipf set -C 20.</p> <ol style="list-style-type: none"> 0. None 1. ANSI(1250)-Central Europe 2. ANSI(1251)-Cyrillic 3. ANSI(1252)-Latin I 4. ANSI(1253)-Greek 5. ANSI(1254)-Turkish 6. ANSI(1255)-Hebrew 7. ANSI(1256)-Arabic 8. ANSI(1257)-Baltic 9. ANSI(1258)-Viet Nam 10. OEM(437)-United States 11. OEM(850)-Multilingual Latin I 12. OEM(860)-Portuguese 13. OEM(861)-Icelandic 14. OEM(863)-Canadian French 15. OEM(865)-Nordic 16. - <i>M</i> < <i>p1</i> > < <i>p2</i> >	<p>It means to setup APP Enforcement and Syslog.</p> <p><<i>p1</i>>: Enter a number (0 to 32). In which, 0 means none; 1 to 32 mens the index number of the profile.</p> <p><<i>p2</i>>: "0" means the log related to APP Enforcement will not be recorded on Syslog; "1" means the log related to APP Enforcement will be recorded on Syslog.</p>
- <i>U</i> < <i>p1</i> > < <i>p2</i> >	<p>It means to setup URL Content Filter for packets not matching any rule.</p> <p><<i>p1</i>>: Enter a number (0 to 8). In which, 0 means none; 1 to 8 mens the index number of the profile.</p> <p><<i>p2</i>>: "0" means the log related to URL Content Filter will not be recorded on Syslog; "1" means the log related to URL Content Filter will be recorded on Syslog.</p>
- <i>W</i> < <i>p1</i> > < <i>p2</i> >	<p>It means to setup Web Content Filter for packets not matching any rule.</p>

	<p><p1>: Enter a number (0 to 8). In which, 0 means none; 1 to 8 mens the index number of the profile.</p> <p><p2>: "0" means the log related to Web Content Filter will not be recorded on Syslog; "1" means the log related to Web Content Filter will be recorded on Syslog.</p>
<i>-D <p1> <p2></i>	<p>It means to setup DNS Filter for packets not matching any rule.</p> <p><p1>: Enter a number (0 to 8). In which, 0 means none; 1 to 8 mens the index number of the profile.</p> <p><p2>: "0" means the log related to DNS Filter will not be recorded on Syslog; "1" means the log related to DNS Filter will be recorded on Syslog.</p>
<i>-a <p1></i>	It means to configure the advanced settings.
<i>-f <p1></i>	<p>It means to accept large incoming fragmented UDP or ICMP packets.</p> <p><p1>: Enter 1(enable) or 0 (disable).</p>
<i>-t <p1></i>	<p>It means to enable or disable the Transparent Mode.</p> <p><p1>: Enter 1(enable) or 0 (disable).</p>
<i>-E <p1> <p2></i>	<p>It means to set the maximum count for session limitation.</p> <p><p1>: Enter a number (0 to 50000)</p> <p><p2>: "0" means the log related to session control will not be recorded on Syslog; "1" means the log related to session control will be recorded on Syslog.</p>
<i>-Q <p1> <p2></i>	<p>It means to set the QoS Class.</p> <p><p1>: Enter a number (0 to 4).</p> <p>0: None 1: Class 1 2: Class 2 3: Class 3 4: Default Class</p> <p><p2>: "0" means the log related to QoS Class will not be recorded on Syslog; "1" means the log related to QoS Class will be recorded on Syslog.</p>
<i>-Y <p1> <p2></i>	<p>It means to set the User Management.</p> <p><p1>: Enter a number (-1 to 2).</p> <p>-1: None 0: All 1: user object 2: user group</p> <p><p2>: 1 to 200(if p1 is set with 1, user object) or 1 to 32(if p1 is set with 2, user group)</p>
<i>-y <p1></i>	<p>It means the log related to User Management will be or be not recorded on Syslog.</p> <p><p1>: Enter 1(enable) or 0 (disable).</p>
<i>-w <p1></i>	<p>It means to set the window size of TCP protocol.</p> <p><p1>: Enter a value (0 to 65535).</p>
<i>-A <p1></i>	<p>It means to enable or disable the function of packet capture.</p> <p><p1>: Enter 1(enable) or 0 (disable).</p>
<i>About ipf set <SET_NO> <Options></i>	
<i>-m <Comments></i>	<p>It means to set comment for a filter set.</p> <p><Comments>: Enter a description for the filter set.</p>
<i>-v</i>	It means to view the comment and the next filter set.
<i>-n <NEXT_SET_NO></i>	It means to specify the next filter set of current filter set.

<NEXT_SET_NO>: Enter a number (1 to 12).
For example, ipf set 1 -n 2.

Example

```
> ipf set -R "v4 1"
Setting saved.
> ipf set -R "v6 1"
Setting saved.
> ipf set -v

Data Filter: Enable (Start Filter Set = 1)
Log Flag      : Disable

Actions for packet not matching any rule:
Pass or Block      : Pass
CodePage           : ANSI(1252)-Latin I

[v] Enable Strict Security Firewall
>
```

Telnet Command: ipf rule

This command is used to set filter rule for firewall.

Syntax

```
ipf rule s r [-<command> <parameter> | ...
```

```
ipf rule s r -v
```

Syntax Description

Parameter	Description
s	It means the Filter Set.

	s: Enter a value (1 to 12).
<i>r</i>	It means Filter Rule r: Enter a value (1~7).
[<command> <parameter> ...]	The available commands with parameters are listed below. [...] means that you can type in several commands in one line.
-e <0/1>	It means to enable or disable the rule setting. 0: disable 1:enable
-v	It is used to show current filter rule settings.
-D <value>	It means to set the direction of packet flow. It is for Data Filter only. 0, LAN/RT/VPN -> WAN 1, WAN -> LAN/RT/VPN 2, LAN/RT/VPN -> LAN/RT/VPN
-I "<e/d> <para1, para2,...>"	It means to set incoming interface. e: Enable the function. d: Disable the function. Para1, para2,...: all, LAN1, LAN2, ..., LAN4, DMZ, RT, VPN, WAN1, ..., WAN6
-O "<e/d> <para1, para2,...>"	It means to set outgoing interface. e: Enable the function. d: Disable the function. Para1, para2,...: Available values include all, LAN1, LAN2,...LAN8, RT, VPN, WAN1, WAN2,...WAN7 Exampe: > ipf rule 3 1 -e 1 -O "e LAN2"
-s "o/o6/g/g6/c <field> <obj>"	It means to specify source IP object, IP group. o: Indicates "IPv4 object". o6: Indicates IPv6 object". g: Indicates "IPv4 group". g6: Indicates "IPv6 group". c: Indicates country object. field: Indicates the quantity of objects/groups that can be set for this rule at one time. -2 object profiles are allowed for IPv4 -2 group profiles are allowed for IPv4 group -3 object profiles are allowed for IPv6 -1 group profiles is allowed for IPv6 group obj : indicates index number of object or index number of group. -Range for IPv4, from 1 to 192, 0 means none. -Range for IPv4 group, from 1 to 32, 0 means none. -Range for IPv6, from 1 to 64, 0 means none. -Range for IPv6 group, from 1 to 32, 0 means none. -Ranges for country object, from 1 to 32. For example, -s "o 1 2" means IPv4 object profile 1 and 2 are set as souce IP. Exampe: > ipf rule 3 1 -e 1 -s "o 1 2"
-s "u <Address Type> <Start IP Address> <End IP Address> <Address Mask>"	It means to configure source IP address including address type, start IP address, end IP address and address mask. u : It means "user defined". Address Type : Type the number (representing different address type). 0 : Subnet Address

	<p>1 : Single Address 2 : Any Address 3 : Range Address</p> <p>Example: Set Subnet Address => -s "u 0 192.168.1.10 255.255.255.0" Set Single Address => -s "u 1 192.168.1.10 " Set Any Address => -s "u 2 " Set Range Address => -s "u 3 192.168.1.10 192.168.1.15"</p>
-d "o/o6/g/g6/c <field> <obj>"	<p>It means to specify destination IP object, IP group.</p> <p>o: Indicates "IPv4 object". o6: Indicates IPv6 object". g: Indicates "IPv4 group". g6: Indicates "IPv6 group". c: Indicates country object. field: Indicates the quantity of objects/groups can be set for this rule at one time.</p> <ul style="list-style-type: none"> -2 object profiles are allowed for IPv4 -2 group profiles are allowed for IPv4 group -3 object profiles are allowed for IPv6 -1 group profiles is allowed for IPv6 group <p>obj : indicates index number of object or index number of group.</p> <ul style="list-style-type: none"> -Range for IPv4, from 1 to 192, 0 means none. -Range for IPv4 group, from 1 to 32, 0 means none. -Range for IPv6, from 1 to 64, 0 means none. -Range for IPv6 group, from 1 to 32, 0 means none. -Ranges for country object, from 1 to 32. <p>For example, -s "o 1 2" means IPv4 object profile 1 and 2 are set as destination IP.</p> <p>Exampe: > ipf rule 3 1 -e 1 -d "o 2 2"</p>
-d "u <Address Type> <Start IP Address> <End IP Address> <Address Mask>"	<p>It means to configure destination IP address including address type, start IP address, end IP address and address mask.</p> <p>u : It means "user defined".</p> <p><i>Address Type</i> : Type the number (representing different address type).</p> <p>0 : Subnet Address 1 : Single Address 2 : Any Address 3 : Range Address</p> <p>Example: Set Subnet Address => -d "u 0 192.168.1.10 255.255.255.0" Set Single Address => -d "u 1 192.168.1.10 " Set Any Address => -d "u 2 " Set Range Address => -d "u 3 192.168.1.10 192.168.1.15"</p>
-S o/g <obj>	<p>It means to specify Service Type object.</p> <p>o : indicates "object" profile. g: indicates "group" profile.</p> <p><obj> : indicates index number of object or index number of group. Available settings range from 1-96. For example, -S "o 1" means the first service type object profile.</p>
-S "u <protocol> <source_port_value> <destination_port_vale>"	<p>It means to configure advanced settings for Service Type, such as protocol and port range.</p> <p>u : it means "user defined".</p> <p><protocol> : It means TCP(6),UDP(17), TCP/UDP(255), Any(0),</p>

	<p>ICMP(1), ICMPv6(58), Other(other)</p> <p><source_port_value> :</p> <p>1 : Port OP, range is 0-3. 0:=, 1:!=, 2:>, 3:<</p> <p>3 : Port range of the Start Port Number, range is 1-65535.</p> <p>5 : Port range of the End Port Number, range is 1-65535.</p> <p><destination_port_value>:</p> <p>2 : Port OP, range is 0-3, 0:==, 1:!=, 2:>, 3:<</p> <p>4 : Port range of the Start Port Number, range is 1-65535.</p> <p>6 : Port range of the End Port Number, range is 1-65535.</p>
<i>-f <value></i>	<p>It means to set fragment type.</p> <p>0 : Don't care.</p> <p>1 : Unfragmented.</p> <p>2 : Fragmented.</p> <p>3 : Too Short</p>
<i>-F "<Param 0> <Param 1>"</i>	<p>It means the Filter action you can specify.</p> <p><param 0>: Enter the number to set the filter action.</p> <p>0 : Pass Immediately.</p> <p>1 : Block Immediately.</p> <p>2 : Pass if no further match.</p> <p>3 : Block if no further match.</p> <p><Param 1>: Let the log be recorded on Syslog.</p> <p>0 : Disable Log.</p> <p>1 : Enable Log.</p>
<i>-m "<Param 0> <Param 1>"</i>	<p>It means to set MAC Bind IP type and the Syslog.</p> <p><param 0>: Enter the number to choose the type.</p> <p>0 : Non-Strict.</p> <p>1 : Strict.</p> <p><Param 1>: Let the log be recorded on Syslog.</p> <p>0 : Disable Log.</p> <p>1 : Enable Log.</p>
<i>-Y <Param 0> <Param 1></i>	<p>It means to set the User Management.</p> <p><param 0>: Enter the number to choose the type.</p> <p>-1 : None.</p> <p>0 : All.</p> <p>1 : User Object</p> <p>2 : User group</p> <p><Param 1>: Let the log be recorded on Syslog if <param 0> is set with None/ALL.</p> <p>0 : Disable.</p> <p>1 : Enable.</p> <p>Enter the the user object number (1 to 200) / group number (1 to 32) if <param 0> is set with User Object.</p>
<i>-y <value></i>	<p>It means the log related to User Management will be or be not recorded on Syslog.</p> <p><value>: Enter 1(enable) or 0 (disable)</p>
<i>-L <Param 0> <Param 1></i>	<p>It means to set the maximum count for the session limitation.</p> <p><param 0>: Enter the number (0 to 50000) to choose the type.</p> <p><Param 1>: Let the log be recorded on Syslog.</p> <p>0 : Disable.</p> <p>1 : Enable.</p>

-q <Param 0> <Param 1>	<p>It means to set the classification for QoS.</p> <p><Param 0>:</p> <ul style="list-style-type: none"> 1- Class 1, 2 - Class 2, 3 - Class 3, 4 - Other <p><Param 1>: Let the log be recorded on Syslog.</p> <ul style="list-style-type: none"> 0 : Disable. 1 : Enable.
-l <Param 0> <Param 1>	<p>It means load balance policy.</p> <p>Such function is used for "debug" only.</p> <p><Param 0>: Enter 0, 1, 2, or 3.</p> <ul style="list-style-type: none"> 0:Auto-Select, 1:WAN 1. 2:WAN 2. 3:WAN 3. <p><Param 1>: Enter 0 or 1.</p> <ul style="list-style-type: none"> 0:Disable Log. 1:Enable Log.
-a "<Param 0> <Param 1>"	<p>It means to specify which APP Enforcement profile will be applied.</p> <p><Param 0> : Available settings range from 0 ~ 32. "0" means no profile will be applied.</p> <p><Param 1> : Let the log be recorded on Syslog.</p> <ul style="list-style-type: none"> 0 : Disable. 1 : Enable.
-u <Param 0> <Param 1>	<p>It means to specify which URL Content Filter profile will be applied.</p> <p><Param 0> : Available settings range from 0 ~ 8. "0" means no profile will be applied.</p> <p><Param 1> : Let the log be recorded on Syslog.</p> <ul style="list-style-type: none"> 0 : Disable. 1 : Enable.
-w "<Param 0> <Param 1>"	<p>It means to specify which Web Content Filter profile will be applied.</p> <p><Param 0> : Available settings range from 0 ~ 8. "0" means no profile will be applied.</p> <p><Param 1> : Let the log be recorded on Syslog.</p> <ul style="list-style-type: none"> 0 : Disable. 1 : Enable.
-n "<Param 0> <Param 1>"	<p>It means to specify which DNS Filter profile will be applied.</p> <p><Param 0> : Available settings range from 0 ~ 8. "0" means no profile will be applied.</p> <p><Param 1> : Let the log be recorded on Syslog.</p> <ul style="list-style-type: none"> 0 : Disable. 1 : Enable.
-N <value>	<p>It means to set the Next Filter Set.</p> <p><value> : Available settings range from 0 ~ 12. "0" means no profile will be applied.</p> <ul style="list-style-type: none"> 0 : None 1 : Set#1; 2: Set#2, and so on.
-c <0-20>	<p>It means to set code page. Different number represents different code page.</p> <ul style="list-style-type: none"> 0. None 1. ANSI(1250)-Central Europe

	<ol style="list-style-type: none"> 2. ANSI(1251)-Cyrillic 3. ANSI(1252)-Latin I 4. ANSI(1253)-Greek 5. ANSI(1254)-Turkish 6. ANSI(1255)-Hebrew 7. ANSI(1256)-Arabic 8. ANSI(1257)-Baltic 9. ANSI(1258)-Viet Nam 10. OEM(437)-United States 11. OEM(850)-Multilingual Latin I 12. OEM(860)-Portuguese 13. OEM(861)-Icelandic 14. OEM(863)-Canadian French 15. OEM(865)-Nordic 16. ANSI/OEM(874)-Thai 17. ANSI/OEM(932)-Japanese Shift-JIS 18. ANSI/OEM(936)-Simplified Chinese GBK 19. ANSI/OEM(949)-Korean 20. ANSI/OEM(950)-Traditional Chinese Big5
<i>-C "<Windows Size> <Session_Timeout>"</i>	It means to set Window size and Session timeout (Minute). <Windows Size> - Available settings range from 1 ~ 65535. <Session_Timeout> - Make the best utilization of network resources.
<i>-b <value></i>	It means to enable or disable the DrayTek Banner. <value>: 0 : Disable; 1 : Enable.
<i>-t "i <Param 0> <Param 1>"</i>	It means to set schedule profile. Totally, there are four sets of schedule profiles can be specified. <param 0>: Enter the index number (1 to 4) for each set. <param 1>: Enter the index number (0 to 15) of the schedule profile for each set. 0 means none. For example, -t "i 1 3" means schedule profile #3 is configured for set #1. Exampe: > ipf rule 3 1 -e 1 -t "i 1 3"
<i>-t "c <value>"</i>	It means to enable or disable the function of clearing sessions when the schedule is ON. <value>: 0 : Disable; 1 : Enable.
<i>-M <Your Comments></i>	It means to set comments for the filter rule. <Your Comments>: Enter a brief description.
<i>-U "<up/down>"</i>	It means to move up or move down the order of a filter rule in the filter set. up: It indicates move the filter rule up. down: It indicates move the filter rule down.

Example

```

> ipf rule 2 1 -e 1 -M "Your Comments" -s "o 1" -d "o 2" -S "o 1" -F "1"
> ipf rule 2 1 -v
Filter Set 2 Rule 1:

Status : Disable
Comments: <null>
Index(1-15) in Schedule Setup: <null>, <null>, <null>, <null>

```

```

Clear sessions when schedule is ON: Disable

Direction          : LAN/RT/VPN -> WAN
Src Interface       : LAN1, LAN2, LAN3, LAN4, Routed, VPN
Dst Interface       : WAN1, WAN2, WAN3, WAN4, WAN5, WAN6
Source IP           : Any
Destination IP      : Any
Service Type        : Any
Fragments           : Don't Care

Pass or Block       : Pass Immediately
Branch to Other Filter Set: None
Max Sessions Limit  : 50000
Current Sessions    : 0

Telnet Command: ipf flowtrack

This command is used to set and view flowtrack sessions.

Syntax

`ipf flowtrack set [-re]`

`ipf flowtrack view [-f]`

`ipf flowtrack -i<IP address> -p<value>-t<value>`

Syntax Description

Parameter	Description
<code>-r</code>	It means to refresh the flowtrack.
<code>-e</code>	It means to enable or disable the flowtrack.
<code>-f</code>	It means to show the sessions state of flowtrack. If you do not specify any IP address, then all the session state of flowtrack will be displayed.
<code>-b</code>	It means to show all of IP sessions state.

Example

```
> ipf flowtrack set -r
Refresh the flowstate ok
> ipf flowtrack view -f
Start to show the flowtrack sessions state:

ORIGIN>> 192.168.1.11:59939 ->      8.8.8.8: 53 ,ifno=0
REPLY >>      8.8.8.8: 53 ->      192.168.1.11:59939 ,ifno=3
          proto=17, age=93023180(3920), flag=203
ORIGIN>> 192.168.1.11:15073 ->      8.8.8.8: 53 ,ifno=0
REPLY >>      8.8.8.8: 53 ->      192.168.1.11:15073 ,ifno=3
          proto=17, age=93025100(2000), flag=203
ORIGIN>> 192.168.1.11: 7247 ->      8.8.8.8: 53 ,ifno=0
REPLY >>      8.8.8.8: 53 ->      192.168.1.11: 7247 ,ifno=3
          proto=17, age=93020100(7000), flag=203
End to show the flowtrack sessions state
> ipf flowtrack set -e
Current flowtrack OFF
Refresh the flowstate ok
>
```

Telnet Command: Log

This command allows users to view log for WAN interface such as call log, IP filter log, flush log buffer, etc.

Syntax

```
log [-cfhptwx?] [-F a|c|f|w]
```

Syntax Description

Parameter	Description
-c	It means to show the latest call log.
-f	It means to show the IP filter log.
-F	It means to show the flush log buffer. a: flush all logs c: flush the call log f: flush the IP filter log w: flush the WAN log
-h	It means to show this usage help.
-p	It means to show PPP/MP log.
-t	It means to show all logs saved in the log buffer.
-w	It means to show WAN log.
-x	It means to show packet body hex dump.

Example

```
> log -w
25:36:25.580 ---->DHCP (WAN-5) Len = 548XID = 0x7880fdd4
      Client IP      = 0.0.0.0
      Your IP        = 0.0.0.0
      Next server IP = 0.0.0.0
```

```

Relay agent IP = 0.0.0.0
25:36:33.580 ---->DHCP (WAN-5) Len = 548XID = 0x7880fdd4
Client IP      = 0.0.0.0
Your IP       = 0.0.0.0
Next server IP = 0.0.0.0
Relay agent IP = 0.0.0.0
25:36:41.580 ---->DHCP (WAN-5) Len = 548XID = 0x7880fdd4
Client IP      = 0.0.0.0
Your IP       = 0.0.0.0
Next server IP = 0.0.0.0
Relay agent IP = 0.0.0.0
25:36:49.580 ---->DHCP (WAN-5) Len = 548XID = 0x7880fdd4
Client IP      = 0.0.0.0
Your IP       = 0.0.0.0
Next server IP = 0.0.0.0
Relay agent IP = 0.0.0.0
25:36:57.580 ---->DHCP (WAN-5) Len = 548XID = 0x7880fdd4
Client IP      = 0.0.0.0
Your IP       = 0.0.0.0

```

Telnet Command: mngt ftpport

This command allows users to set FTP port for management.

Syntax

mngt ftpport <FTP port>

Syntax Description

Parameter	Description
<i>FTP port</i>	It means to Enter the number for FTP port. The default setting is 21.

Example

```

> mngt ftpport 21
% Set FTP server port to 21 done.

```

Telnet Command: mngt httpport

This command allows users to set HTTP port for management.

Syntax

mngt httpport <Http port>

Syntax Description

Parameter	Description
<i>Http port</i>	It means to enter the number for HTTP port. The default setting is 80.

Example

```

> mngt httpport 80
% Set web server port to 80 done.

```

Telnet Command: mngt httpsport

This command allows users to set HTTPS port for management.

Syntax

mngt httpsport <Https port>

Syntax Description

Parameter	Description
<i>Https port</i>	It means to Enter the number for HTTPS port. The default setting is 443.

Example

```
> mngt httpsport 443
% Set web server port to 443 done.
```

Telnet Command: mngt sslvpnport

This command allows users to set SSL VPN port for management.

Syntax

mngt sslvpnport <SSL VPN port>

Syntax Description

Parameter	Description
<i>SSL VPN port</i>	It means to type the number for SSL VPN port. The default setting is 443.

Example

```
> mngt sslvpnport 1010
% Set SSL VPN port to 1010 done.
```

Telnet Command: mngt telnetport

This command allows users to set telnet port for management.

Syntax

mngt telnetport <Telnet port>

Syntax Description

Parameter	Description
<i>Telnet port</i>	It means to Enter the number for telnet port. The default setting is 23.

Example

```
> mngt telnetport 23
% Set Telnet server port to 23 done.
```

Telnet Command: mngt sshport

This command allows users to set SSH port for management.

Syntax

mngt sshport <ssh port>

Syntax Description

Parameter	Description
<i>ssh port</i>	It means to Enter the number for SSH port. The default setting is 22.

Example

```
> mngt sshport 23
% Set ssh port to 23 done.
```

Telnet Command: mngt noping

This command is used to pass or block Ping from LAN PC to the internet.

Syntax

mngt noping *on*

mngt noping *off*

mngt noping *viewlog*

mngt noping *clearlog*

Syntax Description

Parameter	Description
<i>on</i>	All PING packets will be forwarded from LAN PC to Internet.
<i>off</i>	All PING packets will be blocked from LAN PC to Internet.
<i>viewlog</i>	It means to display a log of ping action, including source MAC and source IP.
<i>clearlog</i>	It means to clear the log of ping action.

Example

```
> mngt noping off
% No Ping Packet Out is OFF!!
```

Telnet Command: mngt defenseworm

This command can block specified port for passing through the router.

Syntax

mngt defenseworm *on*

mngt defenseworm *off*

mngt defenseworm <add port>

mngt defenseworm <del port>

mngt defenseworm <viewlog>

mngt defenseworm <clearlog>

Syntax Description

Parameter	Description
<i>on</i>	It means to activate the function of defense worm packet out.
<i>off</i>	It means to inactivate the function of defense worm packet out.
<i>add port</i>	It means to add a new TCP port for block.
<i>del port</i>	It means to delete a TCP port for block.
<i>viewlog</i>	It means to display a log of defense worm packet, including source MAC and source IP.
<i>clearlog</i>	It means to remove the log of defense worm packet.

Example

```
> mngt defenseworm add 21
Add TCP port 21
Block TCP port list: 135, 137, 138, 139, 445, 21
> mngt defenseworm del 21
Delete TCP port 21
Block TCP port list: 135, 137, 138, 139, 445
```

Telnet Command: mngt rmtcfg

This command can allow the system administrators to login from the Internet. By default, it is not allowed.

Syntax

mngt rmtcfg <status>

mngt rmtcfg <enable>

mngt rmtcfg <disable>

mngt rmtcfg < http/https/ftp/telnet/ssh/tr069/snmp > <on/off>

Syntax Description

Parameter	Description
<i>status</i>	It means to display current setting for your reference.
<i>enable</i>	It means to allow the system administrators to login from the Internet.
<i>disable</i>	It means to deny the system administrators to login from the Internet.
<i>http/https/ftp/telnet/ssh/tr069/snmp</i>	It means to specify one of the servers/protocols for enabling or disabling.
<i>on/off</i>	on - enable the function. off - disable the function.

Example

```
> mngt rmtcfg ftp on
Enable server fail
Remote configure function has been disabled
please enable by enter mngt rmtcfg enable
```

```

> mngt rmtcfg enable
%% Remote configure function has been enabled.
> mngt rmtcfg ftp on
%% FTP server has been enabled.

```

Telnet Command: mngt lanaccess

This command allows users to manage accessing into Vigor router through LAN port.

Syntax

```
mngt lanaccess -e <0/1> -s <value> -i <value> -l <value>
```

```
mngt lanaccess -f
```

```
mngt lanaccess -d
```

```
mngt lanaccess -v
```

```
mngt lanaccess -h
```

Syntax Description

Parameter	Description
-e <0/1>	It means to enable/disable the function. 0-disable the function. 1-enable the function.
-s <value>	It means to specify service offered. Available values include: FTP, HTTP, HTTPS, TELNET, SSH, None, All
-i <value>	It means the interface which is allowed to access. Available values include: LAN1-LAN8, IP Routed Subnet, None, All Note: LAN1 is always allowed for accessing into the router.
-l <value>	It means the IP object index allowed to access. Available values include: 1 to 192
-E <0/1>	It means to enable the function of specific IP allowed to be access. 0-disable the function. 1-enable the function.
-f	It means to flush all of the settings.
-d	It means to restore the factory default settings.
-v	It means to view current settings.

Example

```

> mngt lanaccess -e 1
> mngt lanaccess -s FTP,TELNET
> mngt lanaccess -i LAN3
> mngt lanaccess -v
Current LAN Access Control Setting:
Current LAN Access Control Setting:
* Enable:Yes
* Service:
  - FTP:Yes
  - HTTP:No

```

```

- HTTPS:No
- TELNET:Yes
- SSH:No
- TR069:No
- Enforce HTTPS:No
* Subnet:
- LAN 49: enabled
  - Specific IP(IP object:0) is disabled
- LAN 50: enabled
  - Specific IP(IP object:0) is disabled
- LAN 51: enabled
  - Specific IP(IP object:0) is disabled
- LAN 52: enabled
  - Specific IP(IP object:0) is disabled
- LAN 53: enabled
  - Specific IP(IP object:0) is disabled
- LAN 54: enabled
  - Specific IP(IP object:0) is disabled
- LAN 55: enabled
  - Specific IP(IP object:0) is disabled
- LAN 56: enabled
  - Specific IP(IP object:0) is disabled
- IP Routed Subnet 8: enabled
  - Specific IP(IP object:0) is disabled

```

Telnet Command: mngt echoicmp

This command allows users to reject or accept PING packets from the Internet.

Syntax

mngt echoicmp <enable>

mngt echoicmp <disable>

Syntax Description

Parameter	Description
<i>enable</i>	It means to accept the echo ICMP packet.
<i>disable</i>	It means to drop the echo ICMP packet.

Example

```

> mngt echoicmp enable
%% Echo ICMP packet enabled.

```

Telnet Command: mngt accesslist

This command allows you to specify that the system administrator can login from a specific host or network. A maximum of three IPs/subnet masks is allowed.

Syntax

mngt accesslist *list*

mngt accesslist *add* <index> <IP Object Index>

mngt accesslist *remove* <index>

mngt accesslist *flush*

Syntax Description

Parameter	Description
<i>list</i>	It can display current setting for your reference.
<i>add</i> <index> <IP Object Index>	It means adding a new entry. <index>: Specify the number (1 to 10) of the entry. <IP Object Index>: Specify the index number (1 to 192) of the IP object profile.
<i>remove</i> <index>	It means to delete the selected item. <index>: Specify the number (1 to 10) of the entry.
<i>flush</i>	It means to remove all the settings in the access list.

Example

```
> mngt accesslist add 1 1
%% Set OK.
> mngt accesslist list
%% Access list :
[Index]      [IP Object Index]      [IP/CIDR or StartIP ~ EndIP]
=====
1           1                       Please setting index=1 for IP Object
>
```

Telnet Command: mngt snmp

This command allows you to configure SNMP for management.

Syntax

mngt snmp [-<command> <parameter> | ...]

Syntax Description

Parameter	Description
[<command> <parameter> /...]	The available commands with parameters are listed below. [...] means that you can Enter several commands in one line.
-e <1/2>	1: Enable the SNMP function. 2: Disable the SNMP function.
-a <1/2>	1: Enable the SNMPV1 function. 2: Disable the SNMPV1 function.
-b <1/2>	1: Enable the SNMPV2C function. 2: Disable the SNMPV2C function.
-c <1/2>	1: Enable the SNMPV3 function. 2: Disable the SNMPV3 function.
-g <Community name>	It means to set the name for getting community by typing a proper character. (max. 23 characters)
-s <Community name>	It means to set community by typing a proper name. (max. 23 characters)
-m <IP address>	It means to set one host as the manager to execute SNMP function. Please type in IPv4 address to specify certain host.

	It allows to set 3 IPs, separated by ",".
<i>-t <Community name></i>	It means to set trap community by typing a proper name. (max. 23 characters)
<i>-n <IP address></i>	It means to set the notification host. It allows to set 2 IPs, separated by ",".
<i>-T <seconds></i>	It means to set the trap timeout <0-999>.
<i>-o <username></i>	It means to set a user account (maximum 23 characters) for user management.
<i>-p <0/1/2></i>	It means to set the authentication algorithm. 0: No auth 1: MD5_AUTH 2: SHA_AUTH
<i>-q <password></i>	It means to set the password (maximum 23 characters) for authentication.
<i>-r <0,3/4/6></i>	It means to set privacy algorithm 0, 3: No_PRIV 4: DES_PRIV 6: AES_PRIV
<i>-u <password></i>	It means to set the password (maximum 23 characters) for privacy.
<i>-V</i>	It means to list SNMP setting.

Example

```
> mngt snmp -e 1 -g draytek -s DK -m
192.168.1.20,192.168.5.192/26,10.20.3.40/24 -t trapcom -n
192.168.1.20,10.20.3.40 -T 88
SNMP Agent Turn on!!!
Get Community set to draytek
Set Community set to DK
Manager Host IP set to 192.168.1.20,192.168.5.192/26,10.20.3.40/24
Trap Community set to trapcom
Notification Host IP set to 192.168.1.20,10.20.3.40
Trap Timeout set to 88 seconds
>
```

Telnet Command: mngt bfp

This command allows you to configure brute force protect (BFP) for system management.

Syntax

mngt bfp [*<command>*]*<parameter>*[...]

Syntax Description

Parameter	Description
[<i><command></i>] <i><parameter></i> [...]	The available commands with parameters are listed below. [...] means that you can Enter several commands in one line.
<i>-e 0/1</i>	Enable / disable the BFP function. 0 - Disable 1 - Enable

<code>-s <service></code>	It means to enable different service. service - Available types are FTP, HTTP, HTTPS, TELNET, TR069, SSH, and All.
<code>-l <failure></code>	It means to set login failure retry times. failure - Available number is from 1 to 255.
<code>-p <penalty></code>	It means to set penalty time for BFP. The unit is sec.
<code>-v</code>	It means to view current settings.

Example

```

> mngt bfp -e 1
> mngt bfp -s FTP
> mngt bfp -l 10
> mngt bfp -v
Current Brute Force Protection Setting:
* Enable: yes
* Service:
- FTP:      yes
- HTTP:     no
- HTTPS:    no
- TELNET:   no
- TR069:    no
- SSH:      no
* Maximum login failures: 10
* Penalty period: 0

```

Telnet Command: mngt cert_import

This command allows you to import a certificate to Vigor router.

Syntax

```
mngt cert_import local_cert <URL><password>
```

```
mngt cert_import trusted_ca <URL>
```

Syntax Description

Parameter	Description
<code>local_cert url <URL></code> <code><password></code>	URL - Enter a URL(http://...) for downloading the certificate. The file is encrypted with the file format of "xxxx.p12". Password - Enter the password for decrypting the .p12 certificate.
<code>trusted_ca <URL></code>	URL - Enter a URL(http://...) for downloading the certificate. The file is encrypted with the file format of "xxxx.p12".

Telnet Command: mngt telnettimeout

This command allows you to configure the timeout for telnet connection.

Syntax

mngt telnettimeout <value>

Syntax Description

Parameter	Description
<value>	Range from 60 to 300. The default value is 300 (seconds).

Example

```
> mngt telnettimeout 100
% Telnet timeout : 100s
```

Telnet Command: mngt ssttimeout

This command allows you to configure the timeout for SSH connection.

Syntax

mngt ssttimeout <value>

Syntax Description

Parameter	Description
<value>	Range from 60 to 300. The default value is 180 (seconds).

Example

```
> mngt ssttimeout 200
% SSH timeout : 200s
```

Telnet Command: msubnet switch

This command is used to configure multi-subnet.

Syntax

msubnet switch <2/3/4> <On/Off>

Syntax Description

Parameter	Description
<2/3/4>	It means LAN interface. 2=LAN2 3=LAN3 4=LAN4
<On/Off>	On means turning on the subnet for the specified LAN interface. Off means turning off the subnet.

Example

```

> msubnet switch 2 On
% LAN2      Subnet On!

This setting will take effect after rebooting.
Please use "sys reboot" command to reboot the router.

```

Telnet Command: msubnet addr

This command is used to configure IP address for the specified LAN interface.

Syntax

```
msubnet addr <2/3/4> <IP address>
```

Syntax Description

Parameter	Description
<2/3/4>	It means LAN interface. 2=LAN2 3=LAN3 4=LAN4
<IP address>	Enter the private IP address for the specified LAN interface.

Example

```

> msubnet addr 2 192.168.5.1
% Set LAN2 subnet IP address done !!!

This setting will take effect after rebooting.
Please use "sys reboot" command to reboot the router.

```

Telnet Command: msubnet nmask

This command is used to configure net mask address for the specified LAN interface.

Syntax

```
msubnet nmask <2/3/4> <IP address>
```

Syntax Description

Parameter	Description
<2/3/4>	It means LAN interface. 2=LAN2 3=LAN3 4=LAN4
<IP address>	Enter the subnet mask address for the specified LAN interface.

Example

```
> msubnet nmask 2 255.255.0.0
% Set LAN2 subnet mask done !!!

This setting will take effect after rebooting.
Please use "sys reboot" command to reboot the router.
```

Telnet Command: msubnet status

This command is used to display current status of subnet.

Syntax

msubnet status <2/3/4>

Syntax Description

Parameter	Description
<2/3/4>	It means LAN interface. 2=LAN2 3=LAN3 4=LAN4

Example

```
> msubnet status 2
% LAN2      Off: 0.0.0.0/0.0.0.0, PPP Start IP: 0.0.0.60
% DHCP server: Off
% Dhcp Gateway: 0.0.0.0, Start IP: 0.0.0.10, Pool Count: 50
```

Telnet Command: msubnet dhcps

This command allows you to enable or disable DHCP server for the subnet.

Syntax

msubnet dhcps <2/3/4> <On/Off>

Syntax Description

Parameter	Description
<2/3/4>	It means LAN interface. 2=LAN2 3=LAN3 4=LAN4
<On/Off>	On means enabling the DHCP server for the specified LAN interface. Off means disabling the DHCP server.

Example

```

> msubnet dhcps 3 off
% LAN3          Subnet DHCP Server disabled!

This setting will take effect after rebooting.
Please use "sys reboot" command to reboot the router.

```

Telnet Command: msubnet nat

This command is used to configure the subnet for NAT or Routing usage.

Syntax

```
msubnet nat <2/3/4> <On/Off>
```

Syntax Description

Parameter	Description
<2/3/4>	It means LAN interface. 2=LAN2 3=LAN3 4=LAN4
<On/Off>	On - It means the subnet will be configured for NAT usage. Off - It means the subnet will be configured for Routing usage.

Example

```

> msubnet nat 2 off
% LAN2 Subnet is for Routing usage!
%Note: If you have multiple WAN connections, please be reminded to setup a
Load-Balance policy so that packets from this subnet will be forwarded to the
right WAN interface!

This setting will take effect after rebooting.
Please use "sys reboot" command to reboot the router.

```

Telnet Command: msubnet gateway

This command is used to configure an IP address as the gateway used for subnet.

Syntax

```
msubnet gateway <2/3/4> <Gateway IP>
```

Syntax Description

Parameter	Description
<2/3/4>	It means LAN interface. 2=LAN2 3=LAN3

	4=LAN4
<Gateway IP>	Specify an IP address as the gateway IP.

Example

```
> msubnet gateway 2 192.168.1.13
% Set LAN2 Dhcp Gateway IP done !!!

This setting will take effect after rebooting.
Please use "sys reboot" command to reboot the router.
```

Telnet Command: msubnet ipcnt

This command is used to defined the total number allowed for each LAN interface.

Syntax

msubnet ipcnt <2/3/4> <IP counts>

Syntax Description

Parameter	Description
<2/3/4>	It means LAN interface. 2=LAN2 3=LAN3 4=LAN4
<IP counts>	Specify a total number of IP address allowed for each LAN interface. The available range is from 0 to 220.

Example

```
> msubnet ipcnt 2 15
This setting will take effect after rebooting.
Please use "sys reboot" command to reboot the router.
```

Telnet Command: msubnet talk

This command is used to establish a route between two LAN interfaces.

Syntax

msubnet talk <1/2/3/4> <1/2/3/4> <On/Off>

Syntax Description

Parameter	Description
<1/2/3/4>	It means LAN interface. 1=LAN1

	2=LAN2 3=LAN3 4=LAN4
<On/Off>	On - It means Off - It means

Example

```

> msubnet talk 1 2 on
% Enable routing between LAN1 and LAN2!
> msubnet talk ?
% msubnet talk <1/2/3/4> <1/2/3/4> <On/Off>
% where 1:LAN1, 2:LAN2, 3:LAN3, 4:LAN4,
% Now:
%           LAN1  LAN2  LAN3  LAN4
% LAN1           V
% LAN2           V    V
% LAN3                   V
% LAN4                       V
>

```

Telnet Command: msubnet startip

This command is used to configure a starting IP address for DHCP.

Syntax

msubnet startip <2/3/4> <Gateway IP>

Syntax Description

Parameter	Description
<2/3/4>	It means LAN interface. 2=LAN2 3=LAN3 4=LAN4
<Gateway IP>	Type an IP address as the starting IP address for a subnet.

Example

```

> msubnet startip 2 192.168.2.90
%Set LAN2 Dhcp Start IP done !!!

This setting will take effect after rebooting.
Please use "sys reboot" command to reboot the router.
> msubnet startip ?
% msubnet startip <2/3/4> <Gateway IP>
% Now: LAN2 192.168.2.90; LAN3 192.168.3.10; LAN4 192.168.4.10
>

```

Telnet Command: msubnet pppip

This command is used to configure a starting IP address for PPP connection.

Syntax

msubnet pppip <2/3/4> <Start IP>

Syntax Description

Parameter	Description
<2/3/4>	It means LAN interface. 2=LAN2 3=LAN3 4=LAN4
<Start IP>	Type an IP address as the starting IP address for PPP connection.

Example

```
> msubnet pppip 2 192.168.2.250
% Set LAN2 PPP(IPCP) Start IP done !!!

This setting will take effect after rebooting.
Please use "sys reboot" command to reboot the router.

> msubnet pppip ?
% msubnet pppip <2/3/4> <Start IP>
% Now: LAN2 192.168.2.250; LAN3 192.168.3.200; LAN4 192.168.4.200
>
```

Telnet Command: msubnet nodetype

This command is used to specify the type for node which is required by DHCP option.

Syntax

msubnet nodetype <2/3/4> <count>

Syntax Description

Parameter	Description
<2/3/4>	It means LAN interface. 2=LAN2 3=LAN3 4=LAN4
<count>	Choose the following number for specifying different node type. 1= B-node 2= P-node 4= M-node 8= H-node 0= Not specify any type for node.

Example

```

> msubnet nodetype 2 2
% Set LAN2 Dhcp Node Type done !!!
> msubnet nodetype ?
% msubnet nodetype <2/3/4> <count>
% Now: LAN2 2; LAN3 0; LAN4 0

% count: 1. B-node 2. P-node 4. M-node 8. H-node

```

Telnet Command: msubnet primWINS

This command is used to configure primary WINS server.

Syntax

```
msubnet primWINS <2/3/4> <WINS IP>
```

Syntax Description

Parameter	Description
<2/3/4>	It means LAN interface. 2=LAN2 3=LAN3 4=LAN4
<WINS IP>	Enter the IP address as the WINS IP.

Example

```

> msubnet primWINS 2 192.16.3.5
% Set LAN2 Dhcp Primary WINS IP done !!!
> msubnet primWINS
% msubnet primWINS <2/3/4> <WINS IP>
% Now: LAN2 192.16.3.5; LAN3 0.0.0.0; LAN4 0.0.0.0

```

Telnet Command: msubnet secWINS

This command is used to configure secondary WINS server.

Syntax

```
msubnet secWINS <2/3/4> <WINS IP>
```

Syntax Description

Parameter	Description
<2/3/4>	It means LAN interface. 2=LAN2 3=LAN3 4=LAN4
<WINS IP>	Enter the IP address as the WINS IP.

Example

```

> msubnet secWINS 2 192.168.3.89
% Set LAN2 Dhcp Secondary WINS IP done !!!
> msubnet secWINS ?
% msubnet secWINS <2/3/4> <WINS IP>
% Now: LAN2 192.168.3.89; LAN3 0.0.0.0; LAN4 0.0.0.0

```

Telnet Command: msubnet tftp

This command is used to set TFTP server for multi-subnet.

Syntax

```
msubnet tftp <2/3/4> <TFTP server name>
```

Syntax Description

Parameter	Description
<2/3/4>	It means LAN interface. 2=LAN2 3=LAN3 4=LAN4
<TFTP server name>	Type a name to indicate the TFTP server.

Example

```

> msubnet tftp 2 publish
% Set LAN2 TFTP Server Name done !!!

> msubnet tftp
% msubnet tftp <2/3/4> <TFTP server name>
% Now: LAN2 publish
        LAN3
        LAN4
>

```

Telnet Command: msubnet mtu

This command allows you to configure MTU value for LAN/ IP Routed Subnet.

Syntax

```
msubnet mtu <interface> <value>
```

Syntax Description

Parameter	Description
<interface>	Available settings include LAN1-LAN4, and IP_Routed_Subnet.
<value>	1000 ~ 1500 (Bytes), default: 1500 (Bytes)

Example

```

> msubnet mtu LAN1 1492
Set LAN1 subnet mtu as 1492
> msubnet mtu
Usage:

>msubnet mtu <interface> <value>

<interface>: LAN1~LAN4,IP_Routed_Subnet, <value>: 1000 ~ 1500 (Bytes),
de
fault: 1500 (Bytes)

e.x: >msubnet mtu LAN1 1492

Current Settings:

LAN1 MTU: 1492 (Bytes)
LAN2 MTU: 1500 (Bytes)
LAN3 MTU: 1500 (Bytes)
LAN4 MTU: 1500 (Bytes)
IP Routed Subnet MTU: 1500 (Bytes)

>

```

Telnet Command: msubnet leasetime

This command is used to set leasetime for multi-subnet.

Syntax

msubnet leasetime <1/2/3/4> <Lease Time sec.>

Syntax Description

Parameter	Description
<1/2/3/4>	It means LAN interface. 1=LAN1 2=LAN2 3=LAN3 4=LAN4
<Lease Time sec.>	Enter a value (range: 10 to 259200).

Example

```

> msubnet leasetime 1 18603
% Set LAN1 lease time: 18603

> msubnet leasetime ?
% msubnet leasetime <1/2/3/4> <Lease Time (sec.)>
% Now:LAN1 18603; LAN2 259200; LAN3 259200; LAN4 259200

>

```

Telnet Command: object ip obj

This command is used to create an IP object profile.

Syntax

object ip obj setdefault

object ip obj <INDEX> -v

object ip obj <INDEX> -n <NAME>

object ip obj <INDEX> -i <INTERFACE>

object ip obj <INDEX> -s <INVERT>

object ip obj <INDEX> -a <TYPE> <START_IP> <END/MASK_IP>

Syntax Description

Parameter	Description
<i>setdefault</i>	It means to return to default settings for all profiles.
<INDEX>	It means the index number of the specified object profile.
-v	It means to view the information of the specified object profile. Example: <i>object ip obj 1 -v</i>
-n <NAME>	It means to define a name for the IP object. NAME: Type a name with less than 15 characters. Example: <i>object ip obj 9 -n bruce</i>
-i <INTERFACE>	It means to define an interface for the IP object. INTERFACE=0, means any INTERFACE=1, means LAN INTERFACE=3, means WAN Example: <i>object ip obj 8 -i 0</i>
-s <INVERT>	It means to set invert selection for the object profile. INVERT=0, means disableing the function. INVERT=1, means enabling the function. Example: <i>object ip obj 3 -s 1</i>
-a <TYPE>	It means to set the address type and IP for the IP object profile. TYPE=0, means Mask TYPE=1, means Single TYPE=2, means Any TYPE=3, means Range TYPE=4, means MAC Example: <i>object ip obj 3 -a 2</i>
<START_IP>	When the TYPE is set with 2, you have to type an IP address as a starting point and another IP address as end point. Type an IP address.
<END/MASK_IP>	Type an IP address (different with START_IP) as the end IP address.

Example

```
> object ip obj 1 -n marketing
OK
> object ip obj 1 -a 1 192.168.1.45
OK
> object ip obj 1 -v
IP Object Profile 1
Name      :[marketing]
Interface:[Any]
```

```

Address type:[single]
Start ip address:[192.168.1.45]
End/Mask ip address:[0.0.0.0]
MAC Address:[00:00:00:00:00:00]
Invert Selection:[0]

```

Telnet Command: object ip grp

This command is used to integrate several IP objects under an IP group profile.

Syntax

```
object ip grp setdefault
```

```
object ip grp <INDEX> -v
```

```
object ip grp <INDEX> -n <NAME>
```

```
object ip grp <INDEX> -i <INTERFACE>
```

```
object ip grp <INDEX> -a <IP_OBJ_INDEX>
```

Syntax Description

Parameter	Description
<i>setdefault</i>	It means to return to default settings for all profiles.
<INDEX>	It means the index number of the specified group profile.
-v	It means to view the information of the specified group profile. Example: <i>object ip grp 1 -v</i>
-n <NAME>	It means to define a name for the IP group. NAME: Type a name with less than 15 characters. Example: <i>object ip grp 8 -n bruce</i>
-i <INTERFACE>	It means to define an interface for the IP group. INTERFACE=0, means any INTERFACE=1, means LAN INTERFACE=2, means WAN Example: <i>object ip grp 3 -i 0</i>
-a <IP_OBJ_INDEX>	It means to specify IP object profiles for the group profile. Example: <i>:object ip grp 3 -a 1 2 3 4 5</i> The IP object profiles with index number 1,2,3,4 and 5 will be group under such profile.

Example

```

> object ip grp 2 -n First
IP Group Profile 2
Name    :[First]
Interface:[Any]
Included ip object index:
[0:][0]
[1:][0]
[2:][0]
[3:][0]
[4:][0]
[5:][0]
[6:][0]

```

```

[7:][0]
[8:][0]
[9:][0]
[10:][0]

Telnet Command: object ipv6 obj

This command is used to create an IP object profile.

Syntax

object ip obj setdefault

object ip obj <INDEX> -v

object ip obj <INDEX> -n <NAME>

object ip obj <INDEX> -i <INTERFACE>

object ip obj <INDEX> -s <INVERT>

object ip obj <INDEX> -a <TYPE> <START_IP> <END/MASK_IP>

Syntax Description

Parameter	Description
<i>setdefault</i>	It means to return to default settings for all profiles.
<INDEX>	It means the index number of the specified object profile.
-v	It means to view the information of the specified object profile. Example: <i>object ip obj 1 -v</i>
-n <NAME>	It means to define a name for the IP object. NAME: Type a name with less than 15 characters. Example: <i>object ip obj 9 -n bruce</i>
-i <INTERFACE>	It means to define an interface for the IP object.

	<p>INTERFACE=0, means any INTERFACE=1, means LAN INTERFACE=3, means WAN Example: <i>object ip obj 8 -i 0</i></p>
<code>-s <INVERT></code>	<p>It means to set invert selection for the object profile. INVERT=0, means disabling the function. INVERT=1, means enabling the function. Example: <i>object ip obj 3 -s 1</i></p>
<code>-a <TYPE></code>	<p>It means to set the address type and IP for the IP object profile. TYPE=0, means Mask TYPE=1, means Single TYPE=2, means Any TYPE=3, means Rang Example: <i>object ip obj 3 -a 2</i></p>
<code><START_IP></code>	<p>When the TYPE is set with 2, you have to type an IP address as a starting point and another IP address as end point. Type an IP address.</p>
<code><END/MASK_IP></code>	<p>Type an IP address (different with START_IP) as the end IP address.</p>

Example

```

> object ipv6 obj 3 -n marketing
Setting saved.
> object ipv6 obj 3 -a 0 2607:f0d0:1002:51::4 128
Setting saved.
> object ipv6 obj 3 -v
IPv6 Object Profile 3
Name      :[marketing]
Address Type:[mask]
Start IPv6 Address:[2607:F0D0:1002:51::4]
End IPv6 Address:[::]
Prefix Length:[128]
MAC Address:[00:00:00:00:00:00]
Invert Selection:[0]
Match Type:[0]
>

```

Telnet Command: object ipv6 grp

This command is used to integrate several IP objects under an IP group profile.

Syntax

```

object ip grp setdefault
object ip grp <INDEX> -v
object ip grp <INDEX> -n <NAME>
object ip grp <INDEX> -i <INTERFACE>
object ip grp <INDEX> -a <IP_OBJ_INDEX>

```

Syntax Description

Parameter	Description
<i>setdefault</i>	It means to return to default settings for all profiles.
<INDEX>	It means the index number of the specified group profile.
-v	It means to view the information of the specified group profile. Example: <i>object ip grp 1 -v</i>
-n <NAME>	It means to define a name for the IP group. NAME: Type a name with less than 15 characters. Example: <i>object ip grp 8 -n bruce</i>
-i <INTERFACE>	It means to define an interface for the IP group. INTERFACE=0, means any INTERFACE=1, means LAN INTERFACE=2, means WAN Example: <i>object ip grp 3 -i 0</i>
-a <IP_OBJ_INDEX>	It means to specify IP object profiles for the group profile. Example: <i>:object ip grp 3 -a 1 2 3 4 5</i> The IP object profiles with index number 1,2,3,4 and 5 will be group under such profile.

Example

```

> object ipv6 grp 3 -a 1 2 3 4 5
  IP Group Profile 3
  Name      :[]
Included ip object index:
[0:][1]
[1:][2]
[2:][3]
[3:][4]
[4:][5]
[5:][0]
[6:][0]
[7:][0]
> object ipv6 grp 3 -n marketing
  IPv6 Group Profile 3
  Name      :[marketing]
Included ip object index:
[0:][1]
[1:][2]
[2:][3]
[3:][4]
[4:][5]
[5:][0]
[6:][0]
[7:][0]

```

Telnet Command: object country obj

This command is used to create country object profile.

Syntax

object country set <INDEX> -v

object country set <INDEX> -n <NAME>
 object country set <INDEX>-a <COUNTRY_INDEX>
 object country activate
 object country setdefault
 object country list

Syntax Description

Parameter	Description
<INDEX>	It means the index number of the specified country object profile (1 to 32).
<name>	It means to set a name of the object.
<COUNTRY_INDEX>	It means the code number of a country. To get the detailed information of the code number, use "object country list" to get the one you need.oj
activate	It means to activate the country object profile.
setdefault	It means to return to default settings for all profiles.
list	Displays a list of country with code number. For example, "222" means "Taiwan"; "241" means "United States".

Example

```
> object country set 1 -n Best
Country object Profile 1
Name   :[Best]
Included country index:

Set ok!
> object country set 1 -a 222
> object country set 1 -a 222
Country object Profile 1
Name   :[Best]
Included country index:
[0:][222] Taiwan

Set ok!
```

Telnet Command: object service obj

This command is used to create service object profile.

Syntax

object service obj setdefault
 object service obj <INDEX>-v
 object service obj <INDEX>-n <NAME>
 object service obj <INDEX> -p <PROTOCOL>
 object service obj <INDEX> -s <CHK> <START_P> <END_P>
 object service obj <INDEX> -d <CHK> <START_P> <END_P>

Syntax Description

Parameter	Description
<i>setdefault</i>	It means to return to default settings for all profiles.
<INDEX>	It means the index number of the specified service object profile.
-v	It means to view the information of the specified service object profile. Example: <i>object service obj 1 -v</i>
-n <NAME>	It means to define a name for the IP object. NAME: Type a name with less than 15 characters. Example: <i>object service obj 9 -n bruce</i>
-i <PROTOCOL>	It means to define a PROTOCOL for the service object profile. PROTOCOL =0, means any PROTOCOL =1, means ICMP PROTOCOL =2, means IGMP PROTOCOL =6, means TCP PROTOCOL =17, means UDP PROTOCOL =255, means TCP/UDP Other values mean other protocols. Example: <i>object service obj 8 -i 0</i>
<CHK>	It means the check action for the port setting. 0=equal(=), when the starting port and ending port values are the same, it indicates one port; when the starting port and ending port values are different, it indicates a range for the port and available for this service type. 1=not equal(!=), when the starting port and ending port values are the same, it indicates all the ports except the port defined here; when the starting port and ending port values are different, it indicates that all the ports except the range defined here are available for this service type. 2=larger(>), the port number greater than this value is available.. 3=less(<), the port number less than this value is available for this profile.
-s <CHK> <START_P> <END_P>	It means to set source port check and configure port range (1-65565) for TCP/UDP. START_P: Enter a port number as a starting port. END_P, type a port number as an ending port. Example: <i>object service obj 3 -s 0 100 200</i>
-d <CHK> <START_P> <END_P>	It means to set destination port check and configure port range (1-65565) for TCP/UDP. START_P: Enter a port number as a starting port. END_P: Enter a port number as an ending point. Example: <i>object service obj 3 -d 1 100 200</i>

Example

```
> object service obj 1 -n limit
> object service obj 1 -p 255
> object service obj 1 -s 1 120 240
> object service obj 1 -d 1 200 220
> object service obj 1 -v
Service Object Profile 1
Name      :[limit]
Protocol:[255]
Source port check action:[!]=]
```

```

Source port range:[120~240]
Destination port check action:[!=]
Destination port range:[200~220]

```

Telnet Command: object service grp

This command is used to integrate several service objects under a service group profile.

Syntax

object service grp setdefault

object service grp <INDEX> -v

object service grp <INDEX> -n <NAME>

object service grp <INDEX> -a <SER_OBJ_INDEX>

Syntax Description

Parameter	Description
<i>setdefault</i>	It means to return to default settings for all profiles.
<INDEX>	It means the index number of the specified group profile.
-v	It means to view the information of the specified group profile. Example: <i>object service grp 1 -v</i>
-n <NAME>	It means to define a name for the service group. NAME: Type a name with less than 15 characters. Example: <i>object service grp 8 -n bruce</i>
-a <SER_OBJ_INDEX>	It means to specify service object profiles for the group profile. Example: <i>:object service grp 3 -a 1 2 3 4 5</i> The service object profiles with index number 1,2,3,4 and 5 will be group under such profile.

Example

```

> object service grp 1 -n Grope_1
Service Group Profile 1
Name   :[Grope_1]
Included service object index:
[0:][0]
[1:][0]
[2:][0]
[3:][0]
[4:][0]
[5:][0]
[6:][0]
[7:][0]

> object service grp 1 -a 1 2
Service Group Profile 1
Name   :[Grope_1]
Included service object index:
[0:][1]
[1:][2]
[2:][0]

```

```
[3:][0]
[4:][0]
[5:][0]
[6:][0]
[7:][0]
```

Telnet Command: object kw

This command is used to create keyword profile.

Syntax

```
object kw obj setdefault
object kw obj show PAGE
object kw obj <INDEX> -v
object kw obj <INDEX> -n <NAME>
object kw obj <INDEX> -a <CONTENTS>
```

Syntax Description

Parameter	Description
<i>setdefault</i>	It means to return to default settings for all profiles.
<i>show PAGE</i>	It means to show the contents of the specified profile. PAGE: Enter the page number.
<i>show</i>	It means to show the contents for all of the profiles.
<INDEX>	It means the index number of the specified keyword profile.
-v	It means to view the information of the specified keyword profile.
-n <NAME>	It means to define a name for the keyword profile. NAME: Type a name with less than 15 characters.
-a <CONTENTS>	It means to set the contents for the keyword profile. Example: <i>object kw obj 40 -a test</i>

Example

```
> object kw obj 1 -n children
Profile 1
Name  :[children]
Type  :[Normal]
Content:[]
> object kw obj 1 -a gambling
Profile 1
Name  :[children]
Type  :[Normal]
Content:[gambling]
> object kw obj 1 -v
Profile 1
Name  :[children]
Content:[gambling]
```

Telnet Command: object fe

This command is used to create File Extension Object profile.

Syntax

object fe show

object fe setdefault

object fe obj <INDEX> -v

object fe obj <INDEX> -n <NAME>

object fe obj <INDEX> -e <CATEGORY><FILE_EXTENSION>

object fe obj <INDEX> -d <CATEGORY><FILE_EXTENSION>

Syntax Description

Parameter	Description
<i>show</i>	It means to show the contents for all of the profiles.
<i>setdefault</i>	It means to return to default settings for all profiles.
<INDEX>	It means the index number (from 1 to 8) of the specified file extension object profile.
-v	It means to view the information of the specified file extension object profile.
-n <NAME>	It means to define a name for the file extension object profile. NAME: Type a name with less than 15 characters.
-e	It means to enable the specific CATEGORY or FILE_EXTENSION.
-d	It means to disable the specific CATEGORY or FILE_EXTENSION
<CATEGORY><FILE_EXTENSION>	CATEGORY: Image, Video, Audio, Java, ActiveX, Compression, Execution, P2P, Document Example: <i>object fe obj 1 -e Image</i> FILE_EXTENSION: ".bmp", ".dib", ".gif", ".jpeg", ".jpg", ".jpg2", ".jp2", ".pct", ".pcx", ".pic", ".pict", ".png", ".tif", ".tiff", ".ico", ".asf", ".avi", ".mov", ".mpe", ".mpeg", ".mpg", ".mp4", ".qt", ".rm", ".wmv", ".3gp", ".3gpp", ".3gpp2", ".3g2", ".flv", ".swf", ".aac", ".aiff", ".au", ".mp3", ".m4a", ".m4p", ".ogg", ".ra", ".ram", ".vox", ".wav", ".wma", ".class", ".jad", ".jar", ".jav", ".java", ".jcm", ".js", ".jse", ".jsp", ".jtk", ".alx", ".apb", ".axs", ".ocx", ".olb", ".ole", ".tlb", ".viv", ".vrm", ".ace", ".arj", ".bzip2", ".bz2", ".cab", ".gz", ".gzip", ".rar", ".sit", ".zip", ".bas", ".bat", ".com", ".exe", ".inf", ".pif", ".reg", ".scr", ".torrent", ".doc", ".docx", ".odp", ".ods", ".odt", ".pdf", ".ppt", ".pptx", ".xls", ".xlsx" Example: <i>object fe obj 1 -e .bmp</i>

Example

```
> object fe obj 1 -n music
> object fe obj 1 -e Audio
> object fe obj 1 -v
Profile Index: 1
```

```

Telnet Command: object sms

This command is used to create short message object profile.

Syntax

```

object sms show
object sms setdefault
object sms obj <INDEX> -v
object sms obj <INDEX> -n <NAME>
object sms obj <INDEX> -s ,Service Provider>
object sms obj <INDEX> -u <Username>
object sms obj <INDEX> -p <Password>
object sms obj <INDEX> -q <Quota>
object sms obj <INDEX> -i <Interval>
object sms obj <INDEX> -l <URL>

```

Syntax Description

Parameter	Description
-----------	-------------

<i>show</i>	It means to show the contents for all of the profiles.
<i>setdefault</i>	It means to return to default settings for all profiles.
<INDEX>	It means the index number (from 1 to 10) of the specified SMS object profile.
-v	It means to view the information of the specified SMS object profile.
-n <NAME>	It means to define a name for the SMS object profile. NAME: Type a name with less than 15 characters.
-s <Service Provider>	It means to specify the number of the service provider which offers the service of SMS. Different numbers represent different service provider. 0 : kotsms.com.tw (TW) 2 : textmarketer.co.uk (UK) 4 : messagemedia.co.uk (UK) 5 : bulksms.com (INT) 6 : bulksms.co.uk (UK) 7 : bulksms.2way.co.za (ZA) 8 : bulksms.com.es (ES) 9 : usa.bulksms.com (US) 10 : bulksms.de (DE) 11 : www.pswin.com (EU) 12 : www.messagebird.com (EU) 13 : www.lusosms.com (EU) 14 : www.vibeactivemedia.com (UK)
-u <Username>	It means to define a user name for the SMS object profile. Type a user name that the sender can use to register to selected SMS provider.
-p <Password>	It means to define a password for the SMS object profile. Type a password that the sender can use to register to selected SMS provider.
-q <Quota>	Enter the number of the credit that you purchase from the service provider. Note that one credit equals to one SMS text message on the standard route.
-l <Interval>	It means to set the sending interval for the SMS to be delivered. Enter the shortest time interval for the system to send SMS.
-l <URL>	It means to set the URL for Custom 1 and Custom 2 profiles. The profile name for Custom 1 and Custom 2 are defined in default and can not be changed.

Example

```

> object sms obj 1 -n TW
> object sms obj 1 -s 0
> object sms obj 1 -u carrie
> object sms obj 1 -p 19971125cm
> object sms obj 1 -q 2
> object sms obj 1 -i 50
> object sms obj 1 -v
Profile Index: 1
Profile Name:[TW]
SMS Provider:[kotsms.com.tw (TW)]
Username:[carrie]
Password:[*****]
Quota:[2]
Sending Interval:[50(seconds)]

```

Telnet Command: object mail

This command is used to create mail object profile.

Syntax

```
object mail show
object mail setdefault
object mail obj <INDEX> -v
object mail obj <INDEX> -n <Profile Name>
object mail obj <INDEX> -s <SMTP Server>
object mail obj <INDEX> -l <Use SSL>
object mail obj <INDEX> -m <SMTP Port>
object mail obj <INDEX> -a <Sender Address>
object mail obj <INDEX> -t <Authentication>
object mail obj <INDEX> -u <Username>
object mail obj <INDEX> -p <Password>
object mail obj <INDEX> -i <Sending Interval>
```

Syntax Description

Parameter	Description
<i>show</i>	It means to show the contents for all of the profiles.
<i>setdefault</i>	It means to return to default settings for all profiles.
<INDEX>	It means the index number (from 1 to 10) of the specified mail object profile.
-v	It means to view the information of the specified mail object profile.
-n <Profile Name>	It means to define a name for the mail object profile. <i>Profile Name</i> : Type a name with less than 15 characters.
-s <SMTP Server>	It means to set the IP address of the mail server.
-l <Use SSL>	It means to use port 465 for SMTP server for some e-mail server uses https as the transmission method. 0 - disable 1 - enable to use the port number.
-m <SMTP Port>	It means to set the port number for SMTP server.
-a <Sender Address>	It means to set the e-mail address (e.g., johnwash@abc.com.tw) of the sender.
-t <Authentication>	The mail server must be authenticated with the correct username and password to have the right of sending message out. 0 - disable 1 - enable to use the port number.
-u <Username>	Type a name for authentication. The maximum length of the name you can set is 31 characters.
-p <Password>	Type a password for authentication. The maximum length of the password you can set is 31 characters.
-i <Sending Interval>	Define the interval for the system to send the SMS out. The unit is second.

Example

```
> object mail obj 1 -n buyer
> object mail obj 1 -s 192.168.1.98
> object mail obj 1 -m 25
> object mail obj 1 -t 1
> object mail obj 1 -u john
> object mail obj 1 -p happy123456
> object mail obj 1 -i 25
> object mail obj 1 -v
Profile Index: 1
```

```

Profile Name:[buyer]
SMTP Server:[192.168.1.98]
SMTP Port:[25]
Sender Address:[]
Use SSL:[disable]
Authentication:[enable]
Username:[john]
Password:[*****]
Sending Interval:[0(seconds)]

```

Telnet Command: object noti

This command is used to create notification object profile.

Syntax

```

object noti show
object noti setdefault
object noti obj INDEX -v
object noti obj INDEX -n Profile Name
object mail obj INDEX -e Category Status
object mail obj INDEX -d Category Status

```

Syntax Description

Parameter	Description
<i>show</i>	It means to show the contents for all of the profiles.
<i>setdefault</i>	It means to return to default settings for all profiles.
< <i>INDEX</i> >	It means the index number (from 1 to 8) of the specified notification object profile.
-v	It means to view the information of the specified notification object profile.
-n < <i>Profile Name</i> >	It means to define a name for the notification object profile. <i>Profile Name</i> : Type a name with less than 15 characters.
-e	It means to enable the status of specified category.
-d	It means to disable the status of specified category.
<i>Category</i>	Available categories are: 1: WAN; 2: VPN Tunnel; 3: Temperature Alert; 4: WAN Budget; 5: CVM; 6: High Availability
<i>status</i>	For WAN - 1: Disconnected; 2: Reconnected. For VPN Tunnel - 1: Disconnected; 2: Reconnected. For Temperature Alert - 1: Out of Range. For WAN Budget - 1: Limit Reached. For CVM - 1: CPE Offline; 2: Backup Fail; 3: Restore Fail; 4: FW Update Fail; 5: VPN Profile Setup Fail. For High Availability - 1: Failover Occurred, Config Sync Fail, and Router Unstable

Example

```

> object noti obj 1 -n market
> object noti obj 1 -e 2 1
> object noti obj 1 -v
Profile Index: 1
Profile Name:[market]

```

Category	Status
WAN	[v]Disconnected [v]Reconnected
VPN Tunnel	[v]Disconnected []Reconnected
Temperature Alert	[]USB Temperature Out of Range
WAN Budget Alert	[]Limit Reached
Security	[]Web Log-in event occurs
	[]Telnet Log-in event occurs
	[]SSH Log-in event occurs
	[]TR069 Log-in event occurs
	[]FTP User Log-in event occurs
	[]Config-Changed event occurs

Telnet Command: object schedule

This command is used to create schedule object profile.

Syntax

object schedule set *INDEX option*

object schedule view

object schedule setdefault

Syntax Description

Parameter	Description
<i>set</i>	It means to set the schedule profile.
<i>INDEX</i>	It means the index number (from 1 to 15) of the specified object profile.
<i>option</i>	Available options for schedule.
<i>-e <value></i>	It means to enable the schedule setup. 0 - disable 1 - enable
<i>-c <comment></i>	It means to set brief description for the specified profile. The length range of the comment: 0 ~ 32 characters.
<i>-D <year><month><day></i>	It means to set the starting date of the profile. [year] - Must be between 2000-2049. [month] - Must be between 1-12. [day] - Must be between 1-31. For example: To set Start Date 2015/10/6, type > <i>object schedule set 1 -D "2015 10 6"</i>
<i>-T <hour><minute></i>	It means to set the starting time of the profile. [hour] - Must be between 0-23. [minute] - Must be between 0-59. For example: To set Start Time 10:20, type > <i>object schedule set 1 -T "10 20"</i>
<i>-d <hour><minute></i>	It means to set the duration time of the profile. [hour] - Must be between 0-23. [minute] - Must be between 0-59. For example: To set Duration Time 3:30, type > <i>object schedule set 1 -d "3 30"</i>
<i>-a <value></i>	It means to set the action used for the profile. [value] - 0:Force On, 1:Force Down, 2:Enable Dial-On-Demand, 3:Disable Dial-On-Demand
<i>-I <value></i>	It means to set idle time. [value] - Must be between 0-255(minute). The default is 0.
<i>-h <option></i> <i><day/date/cycle_days></i>	Set how often the schedule will be applied. [option] - Enter 0 to 3.

	0: Once, 1: Weekdays 2: Monthly 3: Cycle days [day] - Enter Sun, Mon, Tue, Wed, Thu, Fri, Sat. If the [option] set as 1(Weekdays), then select which days of a Week. [date] : 1-28 If the [option] set as 2(Monthly), then select which date of a Month. [cycle_days] : 1-30 If the [option] set as 3 (cycle days), then select which days to do the cycle schedule. example: To select Sunday, Monday, Thursday, type > <i>object schedule set 1 -h "1 Sun Mon Thu"</i>
<i>view <INDEX></i>	It means to show the content of the profile.
<i>setdefault</i>	It means to return to default settings for all profiles.

Example

```

> object schedule set 1 -e 1
> object schedule set 1 -c Working
> object schedule set 1 -D "2020 11 8"
> object schedule set 1 -T "8 1"
> object schedule set 1 -d "2 30"
> object schedule set 1 -a 0
> object schedule set 1 -h "1 Mon Wed"
> object schedule view 1
Index No.1

Telnet Command: port

This command allows users to set the speed for specific port of the router.

Syntax

port <1, 2, 3, 4, all> <AN, 1G, 100F, 100H, 10F, 10H, status>

port <wan2> <AN, 1000F, 100F, 100H, 10F, 10H, status>

port <enable, disable> <1, 2, 3, 4, all>

port status

port sniff <on, off, port, txrx, restart, status>

port 8021x <enable, disable, status, addport, delport>

port jumbo <on/off>

port jumbo size <value>

port wanfc <INDEX> <on/off/status>

Syntax Description

Parameter	Description
<1, 2, 3, 4, all> <AN, 1G, 100F, 100H, 10F, 10H, status>	It means to set the LAN port and the physical type for the specific port. <1, 2, 3, 4, all>: Select an interface. <AN, 1G, 100F, 100H, 10F, 10H, status>: Select the physical type for the specific port. AN: auto-negotiate. 100F: 100M Full Duplex. 100H: 100M Half Duplex. 10F: 10M Full Duplex. 10H: 10M Half Duplex.
<wan2> <AN, 1000F, 100F, 100H, 10F, 10H, status>	It means to set the WAN port and the physical type for the specific port. <wan2>: Select an interface. <AN, 1000F, 100H, 10F, 10H, status>: Select the physical type for the specific port. AN: auto-negotiate. 1000F: 1000M Full Duplex. 100F: 100M Full Duplex. 100H: 100M Half Duplex. 10F: 10M Full Duplex. 10H: 10M Half Duplex.
<enable, disable> <1, 2, 3, 4, all>	It means to enable or disable the LAN port(s). <enable, disable>: Enter enable or disable. <1,2,3,4, all>: Enter the number to select a LAN port. Or, enter "all" to select all ports.
status	It means to view the Ethernet port status.
sniff <on,off,port,txrx,restart,status>	It means to set settings for sniffer. <on,off,port,txrx,restart,status>: See the following, on - Turn on the sniffer. off - Turn off the sniffer. port - Specify a LAN port (p1, p2, p3 or p4). restart - Restart the system to activate the settings. status - Display current settings. rxrx - Set the transmission and receiving rates for a LAN/WAN port. e.g., > port sniff txrx 30000 p2
802.1x <enable,disable,status,addport,delpport>	It means to set settings for 802.1x. <enable,disable,status,addport,delpport>: See the following, enable - Enable the function. disable - Disable the function. status - Display current settings. addport - Add a port number (1 to 4). delpport - Delete a port number (1 to 4).
Jumbo <on/off>	It means to enable or disable the Jumbo function. <on/off>:If enabled, set a value for the jumbo frame.

<i>jumbo size <value></i>	If jumbo is enabled, set a jumbo size. <value>: 1537 to 9022. Set a number.
<i>wanfc <INDEX> <on/off/status></i>	It means to set WAN flow control. <INDEX>: Enter the index number (1 to 2) of the WAN interface. <on/off/status>: Enter "on" to enable the function; enter "off" to disable the function; enter "status" to view current settings.

Example

```
> port 1 100F
%Set Port 1 Force speed 100 Full duplex OK !!!
> port wanfc 1 status
% WAN1 local node flow control support: ON
```

Telnet Command: portmaptime

This command allows you to set a time of keeping the session connection for specified protocol.

Syntax

portmaptime [*-<command>* *<parameter>* | ...]

Syntax Description

Parameter	Description
<i>[<command> <parameter> ...]</i>	The available commands with parameters are listed below. [...] means that you can Enter several commands in one line.
<i>-t <sec></i>	It means "TCP" protocol. <sec>: Type a number to set the TCP session timeout.
<i>-u <sec></i>	It means "UDP" protocol. <sec>: Type a number to set the UDP session timeout.
<i>-i <sec></i>	It means "IGMP" protocol. <sec>: Type a number to set the IGMP session timeout.
<i>-w <sec></i>	It means "TCP WWW" protocol. <sec>: Type a number to set the TCP WWW session timeout.
<i>-s <sec></i>	It means "TCP SYN" protocol. <sec>: Type a number to set the TCP SYN session timeout.
<i>-f</i>	It means to flush all portmaps (useful for diagnostics).
<i>-l <List></i>	List all settings.

Example

```
> portmaptime -t 86400 -u 300 -i 10
> portmaptime -l
----- Current setting -----
TCP Timeout : 86400 sec.
UDP Timeout : 300 sec.
IGMP Timeout : 10 sec.
TCP WWW Timeout: 60 sec.
TCP SYN Timeout: 60 sec.
>
```

Telnet Command: ppa

This command allows you to configure PPA mode.

`ppa [-<command> <parameter> | ...]`

`ppa n [-<command> <parameter> | ...]`

Syntax Description

Parameter	Description
<code>[<command> <parameter> ...]</code>	The available commands with parameters are listed below. [...] means that you can Enter several commands in one line.
<code>-z <1/0></code>	Enable or disable the PPA Hardware Acceleration. <1/0>: Enter 1(enable) or 0 (disable).
<code>-m <mode></code>	Specify a mode. 1=auto 2=manual(traffic) 3=manual(qos) 0=disable
<code>-p <proto></code>	Specify a protocol. <proto> - 1-TCP; 2-UDP; 3-Both.
<code>-b <1/0></code>	Enable/disable TWO-way hardware acceleration. <1/0>: Enter 1(enable) or 0 (disable).
<code>-M enable/disable</code>	Enable/disable the multicast hardware acceleration.
<code>-S</code>	Show multicast table in HW acceleration
<code>-V</code>	Show PPA_WAN_Table and PPA_LAN_Table for reference.
<code>-c</code>	Clean all settings.
<code>-x</code>	Show hardware acceleration information.
<code>-k</code>	Clean the PPA table.
ppa n - used in QoS or specific host	
<code>-I <rule></code>	Specify an index number of rule profile for QoS mode.
<code>-x</code>	Show hardware acceleration information.
<code>-k</code>	Clean the PPA table.

Example

```
> ppa -m 1 -p 1 -b 0
Set ok! The PPA mode is Auto
% You need to set the Manual mode first !

> ppa -v
%PPA is enabled
%PPA NAT is enabled
% PPA mode is Auto
%PPA Protocol TCP 1, UDP 0
%PPA Multicast is enabled
%PPA two way enable
%PPA time is 10
%PPA range is 8000
%PAE range is 2048
%MPE range is 5952
%PPA LAN entries 0, working 0
%PPA WAN entries 0, working 0
%PPA statistics interval: 5 sec
>
```

Telnet Command: prn

This command allows you to view current status (interface and driver) of USB printer.

Syntax

prn status

prn debug

prn enable <0/1>

Example

```
> prn status
Interface: USB bus 2.0
Printer: NotReady

> prn debug
conn[0] :
none
conn[1] :
none
conn[2] :
none
conn[3] :
none
LPD_data_total=0

usblp_ptr=0
UsbPrintReady=0, UsbIsPrinting=0
```

Telnet Command: qos setup

This command allows user to set general settings for QoS.

Syntax

qos setup [-<command> <parameter> | ...]

Syntax Description

Parameter	Description
[<command> <parameter> ...]	The available commands with parameters are listed below. [...] means that you can Enter several commands in one line.
-h	Type it to display the usage of this command.
-W <1~3>	It means to select an interface. <1~3>: 1 is WAN1; 2 is WAN2; 3 is WAN3. The default is WAN1.
-m <mode>	It means to define which traffic the QoS control settings will apply to and enable QoS control. 0: disable. 1: in, apply to incoming traffic only. 2: out, apply to outgoing traffic only. 3: both, apply to both incoming and outgoing traffic. Default is enable (for outgoing traffic).
-i <bandwidth>	It means to set inbound bandwidth in kbps (Ethernet WAN only) The available setting is from 1 to 100000.
-o <bandwidth>	It means to set outbound bandwidth in kbps (Ethernet WAN only). The available setting is from 1 to 100000.

<code>-r <index:ratio></code>	It means to set ratio for class index, in %.
<code>-u <mode></code>	It means to enable bandwidth control for UDP. 0: disable 1: enable Default is disable.
<code>-p <ratio></code>	It means to enable bandwidth limit ratio for UDP.
<code>-t <mode></code>	It means to enable/disable Outbound TCP ACK Prioritize. 0: disable 1: enable
<code>-V</code>	Show all the settings.
<code>-I <bandwidth></code>	It means the minimum available non-VoIP Inbound Bandwidth when VoIP is detected (Kbps). <bandwidth>: Enter a value. Default value: half of WAN inbound bandwidth.
<code>-O <bandwidth></code>	It means the minimum available non-VoIP Outbound Bandwidth when VoIP is detected (Kbps). <bandwidth>: Enter a value. Default value: half of WAN outbound bandwidth.
<code>-v <0/1></code>	It means to adjust to minimum In/Out bandwidth setting (or half QoS bandwidth). 0: Auto bandwidth adjustment. 1: When VoIP detected, QoS In/Out bandwidth will be adjusted to minimum values.
<code>-D</code>	Set all to factory default (for all WANs).
<code>[...]</code>	It means that you can Enter several commands in one line.

Example

```
> qos setup -m 3 -i 9500 -o 8500 -r 3:20 -u 1 -p 50 -t 1
WAN1 QoS mode is both
  inbound bandwidth set to 9500
  outbound bandwidth set to 8500
WAN1 class 3 ratio set to 20
WAN1 udp bandwidth control set to enable
WAN1 udp bandwidth limit ratio set to 50
WAN1 Outbound TCP ACK Prioritizel set to enable
QoS WAN1 set complete; restart QoS
>
```

Telnet Command: qos class

This command allows user to set QoS class.

Syntax

```
qos class -c <no> [-a/e/d <no>>[-<command> <parameter> | ... ]
```

Syntax Description

Parameter	Description
<code>[<command> <parameter> ...]</code>	The available commands with parameters are listed below. [...] means that you can Enter several commands in one line.
<code>-h</code>	Type it to display the usage of this command.
<code>-c <no></code>	Specify the inde number for the class.

	Available value for <no> contains 1, 2 and 3. The default setting is class 1.
-n <name>	It means to type a name for the class.
-a	It means to add rule for specified class.
-e <no>	It means to edit specified rule. <no>: Enter the index number for the rule.
-d <no>	It means to delete specified rule. <no>: Enter the index number for the rule.
-m <mode>	It means to enable or disable the specified rule. 0: disable, 1: enable
-l <addr>	Set the local address. <i>Addr1</i> - It means Single address. Please specify the IP address directly, for example, "-l 172.16.3.9". <i>addr1:addr2</i> - It means Range address. Please specify the IP addresses, for example, "-l 172.16.3.9: 172.16.3.50." <i>addr1:subnet</i> - It means the subnet address with start IP address. Please Enter the subnet and the IP address, for example, "-l 172.16.3.9:255.255.0.0". <i>any</i> - It means Any address. Simple type "-" to specify any address for this command.
-r <addr>	Set the remote address. <i>addr1</i> - It means Single address. Please specify the IP address directly, for example, "-l 172.16.3.9". <i>addr1:addr2</i> - It means Range address. Please specify the IP addresses, for example, "-l 172.16.3.9: 172.16.3.50." <i>addr1:subnet</i> - It means the subnet address with start IP address. Please Enter the subnet and the IP address, for example, "-l 172.16.3.9:255.255.0.0". <i>any</i> - It means Any address. Simple type "-" to specify any address for this command.
-p <DSCP id>	Specify the ID.
-s <Service type>	Specify the predefined service type by typing the number. The available types are listed as below: 1:ANY 2:DNS 3:FTP 4:GRE 5:H.323 6:HTTP 7:HTTPS 8:IKE 9:IPSEC-AH 10:IPSEC-ESP 11:IRC 12:L2TP 13:NEWS 14:NFS 15:NNTP 16:PING 17:POP3 18:PPTP 19:REAL-AUDIO 20:RTSP 21:SFTP 22:SIP 23:SMTP 24:SNMP 25:SNMP-TRAPS 26:SQL-NET 27:SSH 28:SYSLOG 29:TELNET 30:TFTP
-u <Service type>	Specify the user defined service type by typing the number (1 to 40).
-S <d/s>	Show the content for specified DSCP ID/Service type.
-V <1/2/3>	Show the rule in the specified class.

Example

```
> qos class -c 2 -n draytek -a -m 1 -l 192.168.1.50:192.168.1.80
```

```
Following setting will set in the class2
class 2 name set to draytek
Add a rule in class2
Class2 the 1 rule enabled
```

```
Set local address type to Range, 192.168.1.50:192.168.1.80
```

Telnet Command: qos type

This command allows user to configure protocol type and port number for QoS.

Syntax

```
qos type [-a <service name> | -e <no> | -d <no>].
```

Syntax Description

Parameter	Description
-a <name>	It means to add rule.
-e <no>	It means to edit user defined service type. "no" means the index number. Available numbers are 1-40.
-d <no>	It means to delete user defined service type. "no" means the index number. Available numbers are 1-40.
-n <name>	It means the name of the service.
-t <type>	It means protocol type. 6: tcp(default) 17: udp 0: tcp/udp <1-254>: other
-p <port>	It means service port. The typing format must be [start:end] (ex., 510:330).
-l	List user defined types. "no" means the index number. Available numbers are 1-40.

Example

```
> qos type -a draytek -t 6 -p 510:1330

service name set to draytek
service type set to 6:TCP
Port type set to Range
Service Port set to 510 ~ 1330
>
```

Telnet Command: qos voip

This command allows user to enable or disable the QoS for VoIP and RTP.

Syntax

```
qos voip <on/off>
```

Syntax Description

Parameter	Description
on/off	On - Enable the QoS for VoIP. Off - Disable th QoS for VoIP.

Example

```
> qos voip off
QoS for VoIP: Disable; SIP Port: 5060
>
```

Telnet Command: quit

This command can exit the telnet command screen.

Telnet Command: show lan

This command displays current status of LAN IP address settings.

Example

```
> show lan
The LAN settings:
Status  IP             Mask             DHCP Start IP    Pool Gateway
-----
[V]LAN1 192.168.1.1    255.255.255.0   V   192.168.1.10    200 192.168.1.1
[V]LAN2 192.168.5.1    255.255.255.0   V   192.168.2.90    15  192.168.2.1
[X]LAN3 192.168.3.1    255.255.255.0   V   192.168.3.10    100 192.168.3.1
[X]LAN4 192.168.4.1    255.255.255.0   V   192.168.4.10    100 192.168.4.1
[X]Route 192.168.0.1    255.255.255.0   V   0.0.0.0         0   192.168.0.1
```

Telnet Command: show dmz

This command displays current status of DMZ host.

Example

```
%      WAN1 DMZ mapping status:
Index  Status  WAN1 aux IP    Private IP
-----
1      Disable 0.0.0.0

%      WAN2 DMZ mapping status:
Index  Status  WAN2 aux IP    Private IP
-----
1      Disable 0.0.0.0

%      WAN3 DMZ mapping status:
Index  Status  WAN3 aux IP    Private IP
-----
1      Disable 0.0.0.0
```

Telnet Command: show dns

This command displays current status of DNS setting

Example

```
> show dns
%%      Domain name server settings:
% LAN1 Primary DNS: [Not set]
% LAN1 Secondary DNS: [Not set]

% LAN2 Primary DNS: [Not set]
% LAN2 Secondary DNS: [Not set]

% LAN3 Primary DNS: [Not set]
% LAN3 Secondary DNS: [Not set]
```

```

% LAN4 Primary DNS: [Not set]
% LAN4 Secondary DNS: [Not set]

% LAN5 Primary DNS: [Not set]
% LAN5 Secondary DNS: [Not set]

% LAN6 Primary DNS: [Not set]
% LAN6 Secondary DNS: [Not set]

% LAN7 Primary DNS: [Not set]
% LAN7 Secondary DNS: [Not set]

% LAN8 Primary DNS: [Not set]
% LAN8 Secondary DNS: [Not set]

```

Telnet Command: show openport

This command displays current status of open port setting.

Example

```

> show openport
%%      Openport settings:
Index   Status  Comment          Local IP Address
*****
                        No data entry.

```

Telnet Command: show nat

This command displays current status of NAT.

Example

```

> show nat
Port Redirection Running Table:

Index  Protocol  Public Port  Private IP      Private Port
-----
1      0          0           0.0.0.0         0
2      0          0           0.0.0.0         0
3      0          0           0.0.0.0         0
4      0          0           0.0.0.0         0
5      0          0           0.0.0.0         0
6      0          0           0.0.0.0         0
7      0          0           0.0.0.0         0
8      0          0           0.0.0.0         0
9      0          0           0.0.0.0         0

```

10	0	0	0.0.0.0	0
11	0	0	0.0.0.0	0
12	0	0	0.0.0.0	0
13	0	0	0.0.0.0	0
14	0	0	0.0.0.0	0
15	0	0	0.0.0.0	0

--- MORE --- ['q': Quit, 'Enter': New Lines, 'Space Bar': Next Page]

Telnet Command: show portmap

This command displays the table of NAT Active Sessions.

Example

```
> show portmap
-----
Private_IP:Port Pseudo_IP:Port Peer_IP:Port [Timeout/Protocol/Flag]
-----
```

Telnet Command: show pmtime

This command displays the reuse time of NAT session.

Level0: It is the default setting.

Level1: It will be applied when the NAT sessions are smaller than 25% of the default setting.

Level2: It will be applied when the NAT sessions are smaller than the eighth of the default setting.

Example

```
> show pmtime
Level0 TCP=86400001 UDP=300001 ICMP=10001
Level1 TCP=600000 UDP=90000 ICMP=7000
Level2 TCP=60000 UDP=30000 ICMP=5000
```

Telnet Command: show session

This command displays current status of current session.

Example

```
> show session
% Maximum Session Number: 50000
% Maximum Session Usage: 0
% Current Session Usage: 0
% Current Session Used(include waiting for free): 15
```

```

% WAN1 Current Session Usage: 0
% WAN3 Current Session Usage: 0
>

```

Telnet Command: show status

This command displays current status of LAN and WAN connections.

Example

```

> show status
System Uptime:46:20:29
LAN Status
Primary DNS:8.8.8.8           Secondary DNS:8.8.4.4
IP Address:192.168.1.1       Tx Rate:265153   Rx Rate:234251

WAN 1 Status: Disconnected
Enable:Yes      Line:Ethernet  Name:tcom
Mode:PPPoE     Up Time:00:00:00  IP:---        GW IP:---
TX Packets:0   TX Rate(bps):0   RX Packets:0   RX Rate(bps):0

WAN 3 Status: Disconnected
Enable:Yes      Line:USB          Name:
Mode:---        Up Time:00:00:00  IP:---        GW IP:---
TX Packets:0   TX Rate(bps):0   RX Packets:0   RX Rate(bps):0

```

Telnet Command: show voip

This command displays current status of voip.

Example

```

> show status
Idx   LAN_IP PeerIP via   Delay(ms)   Jitter(ms)   Loss(%) Time
Duration(sec) Status
[11] 0.0.0.0 0.0.0.0 ---- 0    0    0    -----  -----
---
[10] 0.0.0.0 0.0.0.0 ---- 0    0    0    -----  -----
---
[9] 0.0.0.0 0.0.0.0 ---- 0    0    0    -----  -----
---
[8] 0.0.0.0 0.0.0.0 ---- 0    0    0    -----  -----
---
[7] 0.0.0.0 0.0.0.0 ---- 0    0    0    -----  -----
---
[6] 0.0.0.0 0.0.0.0 ---- 0    0    0    -----  -----
---
[5] 0.0.0.0 0.0.0.0 ---- 0    0    0    -----  -----
---
[4] 0.0.0.0 0.0.0.0 ---- 0    0    0    -----  -----
---
[3] 0.0.0.0 0.0.0.0 ---- 0    0    0    -----  -----
---

```

	Rx - Indicate received data.
<weekly>	Display the transmitted data or received data collected weekly.

Example

```

> show clienttraffic 01 wan1 tx weekly
> show clienttraffic ?
% clienttraffic [device index] [wan# or lan#] [tx/rx] [weekly]
The external devices index must be between 01 and 30.
Do the command "switch list" to check the device index and device type.
Enter the device index in double-digit. ex: 01, 02, ...

```

Telnet Command: show statistic

This command displays statistics for WAN interface.

Syntax

show statistic

show statistic reset <interface>

Syntax Description

Parameter	Description
reset	It means to reset the transmitted/received bytes to Zero.
<interface>	It means to specify WAN1 -WAN5 (including multi-PVC) interface for displaying related statistics.

Example

```

> show statistic
WAN1 total TX: 0 Bytes ,RX: 0 Bytes
WAN2 total TX: 0 Bytes ,RX: 0 Bytes
WAN3 total TX: 0 Bytes ,RX: 0 Bytes
WAN4 total TX: 0 Bytes ,RX: 0 Bytes
WAN5 total TX: 0 Bytes ,RX: 0 Bytes
WAN6 total TX: 0 Bytes ,RX: 0 Bytes
>

```

Telnet Command: smb setting

This command is used to configure file sharing settings for SMB server.

Syntax

```
smb setting <enable/disable>
smb setting show status
smb setting set workgroup <Workgroup name>
smb setting set host <host name>
smb setting set access <LAN / LANWAN>
smb setting set version <v1v2/v2>
```

Syntax Description

Parameter	Description
<enable/disable>	Enable or disable the SMB service.
show status	Displays current status of SMB service.
Set workgroup <Workgroup name>	It means to set a name of workgroup for SMB service.
set host <host name>	It means to set a name of the host for SMB service.
set access <LAN / LANWAN>	It means to set the access into SMB server by LAN or borth LAN and WAN.
set version <v1v2/v2>	It means to set SMB server version.

Example

```
> smb setting enable
SMB service is enabled.

> smb setting set access LAN
Allow SMB access from LAN only.
> smb setting set version v1v2
SMB version: v1 and v2.
>
```

Telnet Command: srv dhcp dhcp2

This command is used for configuring which method (LAN interface or MAC address) that the DHCP server on IP routed LAN shall use for assigning an IP address to the IP routed LAN clients.

Syntax

```
srv dhcp dhcp2 -l <enable>
srv dhcp dhcp2 -m <enable>
srv dhcp dhcp2 -e <id>
srv dhcp dhcp2 -d <id>
srv dhcp dhcp2 -v
```

Syntax Description

Parameter	Description
-----------	-------------

<i>-l <enable></i>	The DHCP server assigns the IP addresses to the clients via LAN port. <enable> : Enter 0 (disable) or 1 (enable).
<i>-m <enable></i>	The DHCP server assigns the IP addresses to the clients via MAC address configuration. <enable> : Enter 0 (disable) or 1 (enable).
<i>-e <id></i>	Turn on the flag of LAN 1 or LAN 2 if LAN port is enabled. <id>: Enter 1 or 2.
<i>-d <id></i>	Turn off the flag of LAN port 1 or LAN port 2. <id>: Enter 1 or 2.
<i>-v</i>	View current status.

Example

```
> srv dhcp dhcp2 -l 1 -e 1,2
> srv dhcp dhcp2 -v
2nd DHCP server flag status --
  Server works on specified MAC address: ON
  Server works on specified LAN port: ON
  Port 1 flag: ON
  Port 2 flag: ON
>
```

Telnet Command: *srv dhcp public*

This command allows users to configure DHCP server for second subnet.

Syntax

srv dhcp public start <IP address>

srv dhcp public cnt <IP counts>

srv dhcp public status

srv dhcp public add <MAC Addr XX-XX-XX-XX-XX-XX>

srv dhcp public del <MAC Addr XX-XX-XX-XX-XX-XX/all/ALL>

Syntax Description

Parameter	Description
<i>start <IP address></i>	It means the starting point of the IP address pool for the DHCP server. <IP address>: Specify an IP address as the starting point in the IP address pool.
<i>cnt <IP counts></i>	It means the IP count number. <IP counts>: Specify the number of IP addresses in the pool. The maximum is 10.
<i>status</i>	It means the execution result of this command.
<i>add <MAC Addr XX-XX-XX-XX-XX-XX></i>	It means creating a list of hosts to be assigned. <MAC Addr XX-XX-XX-XX-XX-XX>: Specify MAC Address of the host.
<i>del <MAC Addr XX-XX-XX-XX-XX-XX/all/ALL></i>	It means removing the selected MAC address. <MAC Addr XX-XX-XX-XX-XX-XX>: Specify MAC Address of the host. all/ALL: It means all of the MAC addresses.

Example

```
> srv dhcp public start 192.168.1.100
```

```

%% You must enable IP routing !!!

> srv dhcp public status

Index   MAC Address

```

Telnet Command: `srv dhcp dns1`

This command allows users to set Primary IP Address for DNS Server in LAN.

Syntax

```
srv dhcp dns1 <lan1/lan2/lan3/lan4> <DNS IP address>
```

Syntax Description

Parameter	Description
<lan1/lan2/lan3/lan4>	It means to sepcify the LAN interface for setting the DNS server.
<DNS IP address>	It means the IP address that you want to use as DNS1. Note: The IP Routed Subnet DNS must be the same as NAT Subnet DNS).

Example

```

> srv dhcp dns1 lan1 168.95.1.1
% srv dhcp dns1 <DNS IP address>
% Now: 168.95.1.1

```

Telnet Command: `srv dhcp dns2`

This command allows users to set Secondary IP Address for DNS Server in LAN.

Syntax

```
srv dhcp dns2 <lan1/lan2/lan3/lan4> <DNS IP address>
```

Syntax Description

Parameter	Description
<lan1/lan2/lan3/lan4>	It means to sepcify the LAN interface for setting the DNS server.
<DNS IP address>	It means the IP address that you want to use as DNS2. Note: The IP Routed Subnet DNS must be the same as NAT Subnet DNS).

Example

```

> srv dhcp dns2 lan2 10.1.1.1
% srv dhcp dns2 lan2 <DNS IP address>
% Now: 10.1.1.1
>

```

Telnet Command: `srv dhcp frcdnsman1`

This command can force the router to invoke DNS Server IP address.

Syntax

`srv dhcp frcdnsman1 <on/off>`

Syntax Description

Parameter	Description
<code>?</code>	It means to display the current status.
<code>on</code>	It means to use manual setting for DNS setting.
<code>Off</code>	It means to use auto settings acquired from ISP.

Example

```
> srv dhcp frcdnsman1 on
% Domain name server now is using manual settings!
> srv dhcp frcdnsman1 off
% Domain name server now is using auto settings!
```

Telnet Command: `srv dhcp gateway`

This command allows users to specify gateway address for DHCP server.

Syntax

`srv dhcp gateway [Gateway IP]`

Syntax Description

Parameter	Description
<code>Gateway IP</code>	It means to specify a gateway address used for DHCP server.

Example

```
> srv dhcp gateway 192.168.2.1
This setting will take effect after rebooting.
Please use "sys reboot" command to reboot the router.
>
```

Telnet Command: `srv dhcp ipcnt`

This command allows users to specify IP counts for DHCP server.

Syntax

```
srv dhcp ipcnt <IP counts>
```

Syntax Description

Parameter	Description
<IP counts>	It means the number that you have to specify for the DHCP server.

Example

```
> srv dhcp ipcnt ?
% srv dhcp ipcnt <IP counts>
% Now: 150
```

Telnet Command: `srv dhcp off`

This function allows users to turn off DHCP server. It needs rebooting router, please type "sys reboot" command to reboot router.

Telnet Command: `srv dhcp on`

This function allows users to turn on DHCP server. It needs rebooting router, please type "sys reboot" command to reboot router.

Telnet Command: `srv dhcp relay`

This command allows users to set DHCP relay setting.

Syntax

```
srv dhcp relay servip <server ip>
```

```
srv dhcp relay 2nd_servip <server ip>
```

```
srv dhcp relay subnet <index>
```

Syntax Description

Parameter	Description
<server ip>	It means the IP address that you want to used as DHCP server.
<index>	It means subnet 1 or 2. Please type 1 or 2. The router will invoke this function according to the subnet 1 or 2 specified here.

Example

```
> srv dhcp relay servip 192.168.1.46
> srv dhcp relay subnet 2
```

```

> srv dhcp relay servip ?
% srv dhcp relay servip <server ip>
% Now: 192.168.1.46

```

Telnet Command: `srv dhcp startip`

Syntax

`srv dhcp startip <IP address>`

Syntax Description

Parameter	Description
<code><IP address></code>	It means the IP address that you can specify for the DHCP server as the starting point.

Example

```

> srv dhcp startip 192.168.1.53
This setting will take effect after rebooting.
Please use "sys reboot" command to reboot the router.

```

Telnet Command: `srv dhcp status`

This command can display general information for the DHCP server, such as IP address, MAC address, leased time, host ID and so on.

Syntax

`srv dhcp status <LAN1/2/3/4/ip_routed_subnet>`

Syntax Description

Parameter	Description
<code><LAN1/2/3/4/ip_routed_subnet></code>	It means to display current status for the selected interface.

Example

```

> srv dhcp status lan1
LAN1      : DHCP Server On   IP Pool: 192.168.1.10 ~ 192.168.1.209
           Default Gateway: 192.168.1.1
-----
Index  IP Address    MAC Address          Leased Time    HOST ID
-----
1      192.168.1.11  00-1D-AA-0C-CD-08   3:43:46
>

```

Telnet Command: `srv dhcp leasetime`

This command can set the lease time for the DHCP server.

Syntax

`srv dhcp leasetime <Lease Time (sec)>`

Syntax Description

Parameter	Description
<code><Lease Time (sec)></code>	It means the lease time that DHCP server can use. The unit is second.

Example

```
> srv dhcp leasetime 1500
>
```

Telnet Command: `srv dhcp nodetype`

This command can set the node type for the DHCP server.

Syntax

`srv dhcp nodetype <count>`

Syntax Description

Parameter	Description
<code>count</code>	It means to specify a type for node. 1. B-node 2. P-node 4. M-node 8. H-node

Example

```
> srv dhcp nodetype 1
> srv dhcp nodetype ?
%% srv dhcp nodetype <count>
%% 1. B-node 2. P-node 4. M-node 8. H-node
% Now: 1
```

Telnet Command: `srv dhcp primWINS`

This command can set the primary IP address for the DHCP server.

Syntax

`srv dhcp primWINS <WINS IP address>`

`srv dhcp primWINS clear`

Syntax Description

Parameter	Description
<code><WINS IP address></code>	It means the IP address of primary WINS server.
<code>clear</code>	It means to remove the IP address settings of primary WINS server.

Example

```
> srv dhcp primWINS 192.168.1.88
> srv dhcp primWINS ?
%% srv dhcp primWINS <WINS IP address>
%% srv dhcp primWINS clear
% Now: 192.168.1.88
```

Telnet Command: `srv dhcp secWINS`

This command can set the secondary IP address for the DHCP server.

Syntax

`srv dhcp secWINS <WINS IP address>`

`srv dhcp secWINS clear`

Syntax Description

Parameter	Description
<code><WINS IP address></code>	It means the IP address of secondary WINS server.
<code>clear</code>	It means to remove the IP address settings of second WINS server.

Example

```
> srv dhcp secWINS 192.168.1.180
> srv dhcp secWINS ?
%% srv dhcp secWINS <WINS IP address>
%% srv dhcp secWINS clear
% Now: 192.168.1.180
```

Telnet Command: `srv dhcp expRecycleIP`

This command can set the time to check if the IP address can be assigned again by DHCP server or not.

Syntax

`srv dhcp expRecycleIP <sec time>`

Syntax Description

Parameter	Description
<code>sec time</code>	It means to set the time (5-300 seconds) for checking if the IP can be assigned again or not.

Example

```
Vigor> srv dhcp expRecycleIP 250
% DHCP expired_RecycleIP = 250
```

Telnet Command: `srv dhcp tftp`

This command can set the TFTP server as the DHCP server.

Syntax

`srv dhcp tftp <TFTP server name>`

Syntax Description

Parameter	Description
<code><TFTP server name></code>	It means to Enter the name of TFTP server.

Example

```
> srv dhcp tftp TF123
> srv dhcp tftp ?
%% srv dhcp tftp <TFTP server name>
% Now: TF123
```

Telnet Command: `srv dhcp tftpdel`

This command can remove the name defined for the TFTP server.

Syntax

`srv dhcp tftpdel`

Example

```
> srv dhcp tftp TF123
> srv dhcp tftp ?
%% srv dhcp tftp <TFTP server name>
```

```

% Now: TF123
> srv dhcp tftpdel
% The TFTP Server Name had been deleted !!!

```

Telnet Command: srv dhcp option

This command can set the custom option for the DHCP server.

Syntax

srv dhcp option *-h*

srv dhcp option *-l*

srv dhcp option *-d <idx>*

srv dhcp option *-e <1 or 0> -i <lan number> -s <Next Server IP Address>*

srv dhcp option *-e <1 or 0> -i <lan number> -c <option number> -v <option value>*

srv dhcp option *-e <1 or 0> -i <lan number> -c <option number> -x <option value>*

srv dhcp option *-e <1 or 0> -i <lan number> -c <option number> -a <option value>*

srv dhcp option *-u <idx unumber>*

Syntax Description

Parameter	Description
<i>-h</i>	It means to display usage of this command.
<i>-l</i>	It means to display all the user defined DHCP options.
<i>-d <idx></i>	It means to delete the option number by specifying its index number.
<i>-e <1 or 0></i>	It means to enable/disable custom option feature. 1:enable 0:disable
<i>-i <lan number></i>	<i><lan number></i> : It means to specify the LAN interface. 1: lan1 a: all LAN r: routed subnet
<i>-s <Next Server IP Address></i>	It means to set the next server IP address. Next Server IP Address: Enter an IP address.
<i>-c <option number></i>	It means to set option number. Available number ranges from 0 to 255. option number: Enter a number.
<i>-v <option value></i>	It means to set option number by typing string. option value: Enter a string.
<i>-x <option value></i>	It means to set option number with the format of Hexadecimal characters. option value: Enter a number (hex).
<i>-a <option value></i>	It means to set the option value by specifying the IP address. option value: Enter an IP address.
<i>-u <idx number></i>	It means to update the option value of the sepecified index. idx number: Enter the index number of the option value.
<i>-r</i>	Remove all the DHCP server options.

Example

```

> srv dhcp option -e 1 -i 1 -s 8.8.8.8
> srv dhcp option -l
% state  idx interface      opt type    data
% enable 1  ALL LAN                18 ASCII   /path

```

Telnet Command: `srv nat dmz`

This command allows users to set DMZ host. Before using this command, please set WAN IP Alias first.

Syntax

```
srv nat dmz n m [-<command> <parameter> | ... ]
```

Syntax Description

Parameter	Description
<i>[<command> <parameter> ...]</i>	The available commands with parameters are listed below. <i>[...]</i> means that you can Enter several commands in one line.
<i>n</i>	It means to map selected WAN IP to certain host. 1: wan1 2: wan2
<i>m</i>	It means the index number (1 to 8) of the DMZ host. Default setting is "1" (WAN 1). It is only available for Static IP mode. If you use other mode, you can set 1 ~ 8 in this field. If WAN IP alias has been configured, then the number of DMZ host can be added more.
<i>-e</i>	It means to enable/disable such feature. 1:enable 0:disable
<i>-i</i>	It means to specify the private IP address of the DMZ host.
<i>-r</i>	It means to remove DMZ host setting.
<i>-v</i>	It means to display current status.

Example

```

> srv nat dmz 1 1 -i 192.168.1.96
> srv nat dmz -v
%      WAN1 DMZ mapping status:
Index  Status  WAN1 aux IP    Private IP
-----
1      Disable  0.0.0.0        192.168.1.96

%      WAN2 DMZ mapping status:
Index  Status  WAN2 aux IP    Private IP
-----
1      Disable  0.0.0.0

%      WAN3 DMZ mapping status:
Index  Status  WAN3 aux IP    Private IP
-----
1      Disable  0.0.0.0

```

Telnet Command: `srv nat ipsecpass`

This command allows users to enable or disable IPSec ESP tunnel passthrough and IKE source port (500) preservation.

Syntax

`srv nat ipsecpass [options]`

Syntax Description

Parameter	Description
<i>[options]</i>	The available commands with parameters are listed below.
<i>on</i>	It means to enable IPSec ESP tunnel passthrough and IKE source port (500) preservation.
<i>off</i>	It means to disable IPSec ESP tunnel passthrough and IKE source port (500) preservation.
<i>status</i>	It means to display current status for checking.

Example

```
> srv nat ipsecpass status
%% Status: IPsec ESP pass-thru and IKE src_port:500 preservation is OFF.
```

Telnet Command: `srv nat openport`

This command allows users to set open port settings for NAT server.

Syntax

`srv nat openport n m [-<command> <parameter> | ...]`

Syntax Description

Parameter	Description
<i>[<command> <parameter> ...]</i>	The available commands with parameters are listed below. <i>[...]</i> means that you can Enter several commands in one line.
<i>n</i>	It means the index number for the profiles. The range is from 1 to 40.
<i>m</i>	It means to specify the sub-item number for this profile. The range is from 1 to 10.
<i>-a <enable></i>	It means to enable or disable the open port rule profile. 0: disable 1:enable
<i>-c <comment></i>	It means to Enter the description (less than 23 characters) for the defined network service.
<i>-l <source ip idx></i>	It means to set source IP object. 1 to 192: for IP object 1 to 32: for IP group 0: Any

	For example: <code>srv nat openport 1 1 -l 1 -g 0</code>
<code>-g <source ip type></code>	It means to set IP type. 0: IP object 1: IP group For example: <code>srv nat openport 1 1 -l 1 -g 0</code>
<code>-i <local ip></code>	It means to set the IP address for local computer. Local ip: Type an IP address in this field.
<code>-w <widx><ipidx></code>	widx: Specify the public IP. 1: WAN1 Default, 2: WAN1 Alias 1, ...and so on. ipidx: Specify the index number of an alias IP (1 to 32).
<code>-p <protocol></code>	Specify the transport layer protocol. Available values are TCP, UDP and ALL.
<code>-s <start port></code>	It means to specify the starting port number of the service offered by the local host. The range is from 0 to 65535.
<code>-e <end port></code>	It means to specify the ending port number of the service offered by the local host. The range is from 0 to 65535.
<code>-v</code>	It means to display current settings.
<code>-r <remove></code>	It means to delete the specified open port setting. remove: Enter the index number of the profile.
<code>-f <flush></code>	It means to return to factory settings for all the open ports profiles.

Example

```

> srv nat openport 1 1 -a 1 -c games -i 192.168.1.100 -w 1 -p TCP -s 23 -e 83
    Set WAN Port ok!!
> srv nat openport -v
%% Status: Enable
%% Comment: games
%% WAN Interface: WAN1
%% Private IP address: 192.168.1.55
Index  Protocal      Start Port      End Port
*****
  1.    TCP          56              83
>

```

Telnet Command: `srv nat portmap`

This command allows users to set port redirection table for NAT server.

Syntax

```
srv nat portmap add <idx> <serv name> <proto> <pub port> <src ip type> <src ip idx> <pri ip> <pri port> <wan idx> <alias IP>
```

```
srv nat portmap del <idx>
```

```
srv nat portmap disable <idx>
```

```
srv nat portmap enable <idx><proto>
```

```
srv nat portmap flush
```

```
srv nat portmap table
```

```
srv nat portmap view
```

Syntax Description

Parameter	Description
<code>add <idx></code>	It means to add a new port redirection table with an index number. Available index number is from 1 to 40.
<code><serv name></code>	It means to type one name as service name.
<code><proto></code>	It means to specify TCP or UDP as the protocol.
<code><pub port></code>	It means to specify which port can be redirected to the specified Private IP and Port of the internal host.
<code><src ip type></code>	It means to specify the IP type (object or group). ip type: 0 means IP object; 1 means IP group.
<code><src ip idx></code>	It means to specify the index number of the object profile. ip idx: 1 to 192 for IP object profile; 1 to 32 for IP group profile. 0 means any object or group.
<code><pri ip></code>	It means to specify the private IP address of the internal host providing the service.
<code><pri port></code>	It means to specify the private port number of the service offered by the internal host.
<code><wan idx></code>	It means to specify WAN interface for the port redirection. Idx: wan1 to wan4, all
<code><alias IP></code>	It means to specify an alias IP by entering the index number (1 to 32). ip: 1 to 32.
<code>del <idx></code>	It means to remove the selected port redirection setting.
<code>disable <idx></code>	It means to inactivate the selected port redirection setting.
<code>enable <idx></code>	It means to activate the selected port redirection setting.
<code>flush</code>	It means to clear all the port mapping settings.
<code>table</code>	It means to display Port Redirection Configuration Table.
<code>view</code>	It means to display the setting for the selected profile.

Example

```
> srv nat portmap add 1 floor tcp 1500 1 1 192.168.1.1 3000 wan1 1
> srv nat portmap table
```

NAT Port Redirection Configuration Table:

Index	Service Name	Protocol	Public Port	Private IP	Private Port	ifno
1	floor	TCP	1500	192.168.1.11	3000	-1
2		0	0		0	-2
3		0	0		0	-2
4		0	0		0	-2
5		0	0		0	-2
6		0	0		0	-2

19		0	0		0	-2
20		0	0		0	-2
.....						

Telnet Command: `srv nat trigger`

This command allows users to configure port triggering settings for NAT.

Syntax

`srv nat trigger setdefault`

`srv nat trigger view`

`srv nat trigger n [-<command> <parameter> | ...]`

Syntax Description

Parameter	Description
<code>setdefault</code>	Set to factory default settings.
<code>view</code>	Display all of the port triggering settings.
<code>n</code> <code><command><parameter>[...]</code>	"n" means the rule number. The available commands with parameters are listed below. [...] means that you can type in several commands in one line.
<code>-c <XXX></code>	Type a comment for such rule if required.
<code>-e <0/1></code>	Enable (1) or disable (0) a rule (specified with rule number).
<code>-p <1/2/3></code>	Specify the protocol for such trigger rule. 1 - TCP 2 - UDP

	3 - All
-t	Specify the port number (0-65535) for trigger.
-P <1/2/3>	Specify the incoming protocol for such trigger rule. 1 - TCP 2 - UDP 3 - All
-i	Specify the port number (0-65535) for incoming protocol.
-d	Delete the selected trigger rule.
-v	Display the port trigger settings for specified rule.

Example

```

> srv nat trigger 1 -c after_dinner
DrayTek> srv nat trigger 1 -v

Port Trigger Rule Index:1

Status:Disable
Comment:after_dinner
Triggering Protocol:
Triggering Port:
Incoming Protocol:
Incoming Port:

DrayTek>

```

Telnet Command: srv nat status

This command allows users to view NAT Port Redirection Running Table.

Example

```

> srv nat status
NAT Port Redirection Running Table:
Index Protocol Public Port Private IP Private Port
1 6 1500 192.168.1.11 3000
2 0 0 0.0.0.0 0
3 0 0 0.0.0.0 0
4 0 0 0.0.0.0 0
5 0 0 0.0.0.0 0
6 0 0 0.0.0.0 0
7 0 0 0.0.0.0 0
8 0 0 0.0.0.0 0
9 0 0 0.0.0.0 0
10 0 0 0.0.0.0 0
11 0 0 0.0.0.0 0
12 0 0 0.0.0.0 0
13 0 0 0.0.0.0 0
14 0 0 0.0.0.0 0
15 0 0 0.0.0.0 0
16 0 0 0.0.0.0 0
17 0 0 0.0.0.0 0

```

```

18      0      0  0.0.0.0      0
19      0      0  0.0.0.0      0

20      0      0  0.0.0.0      0
...
Protocol: 0 = Disable, 6 = TCP, 17 = UDP
>

```

Telnet Command: `srv nat showall`

This command allows users to view a summary of NAT port redirection setting, open port and DMZ settings.

Example

```

> srv nat showall ?
Index  Proto  WAN IP:Port          Private IP:Port    Act
*****
R01    TCP    0.0.0.0:1500     192.168.1.1:3000  Y
O01    TCP    0.0.0.0:56~83   192.168.1.55:56~83  Y
D01    All    0.0.0.0         192.168.1.96     Y

R:Port Redirection, O:Open Ports, D:DMZ

```

Telnet Command: `srv nat pseudoctl`

This command allows users to check the pseudo port number to prevent from port conflict.

Syntax

`srv nat pseudoctl session <value>`

`srv nat pseudoctl function <0-3>`

Syntax Description

Parameter	Description
<code>session <value></code>	Set the threshold of the session. <value>: 0 to 2147483647.
<code>function <0-3></code>	0: It means "Auto". Check the created pseudo port number automatically when the session number is over the threshold. 1: It means "Not". Create a pseudo port number based on subnet setting. No verification. 2: It means "Must". Check the created pseudo port number if it is used by other client. 3: Create a pseudo port number. No verification.

Example

```

> srv nat pseudoctl function 2
pseudo port: get hash pseudo port + subnet.
pseudo port search: check pseudo port(Must).

```

```

> srv nat pseudoctl function 3
  pseudo port: get hash pseudo port.

> srv nat pseudoctl function 0
  pseudo port: get hash pseudo port + subnet.
  pseudo port search: check pseudo port(Auto).

```

Telnet Command: `srv nat RSTTimeout`

This command is used for forwarding RST out via TCP after a period of time.

Syntax

`srv nat RSTTimeout <value>`

Syntax Description

Parameter	Description
<code><value></code>	Set the timeout value. <value>: 0 to 10 (one unit is 10msec).

Example

```

> srv nat RSTTimeout 2
  Set timeout 2 unit

> %% srv RSTtimeout <value> (unit is 10msec). (0<=value<=10)
-----
now timeout set 2 unit
>

```

Telnet Command: switch -i

This command is used to obtain the TX (transmitted) or RX (received) data for each connected switch.

Syntax

```
switch -i <switch idx_no> <option>
```

Syntax Description

Parameter	Description
<switch idx_no>	It means the index number of the switch profile.
<i>option</i>	The available commands with parameters are listed below. <i>cmd</i> <i>acc</i> <i>traffic <on/off/status/tx/rx></i>
<i>cmd</i>	It means to send command to the client.
<i>acc</i>	It means to set the client authentication account and password.
<i>traffic <on/off/status/tx/rx></i>	It means to turn on/off or display the data transmission from the client.

Example

```
> switch -i 1 traffic on
External Device NO. 1 traffic statistic function is enable
```

Telnet Command: switch status

This command is used to check the status for the auto discovery of external devices.

Example

```
> switch -i 1 traffic on
External Device auto discovery status : Enable
No Respond to External Device : Enable
Display External Device syslog : Enable
```

Telnet Command: switch not_respond

This command is used to detect the external device automatically and display on this page.

Syntax

```
switch not_respond 0
```

```
switch not_respond 1
```

Syntax Description

Parameter	Description
-----------	-------------

0	Disable the option of "No Respond to External Device packets".
1	Enable the option of "No Respond to External Device packets".

Example

```
> switch not_respond 1
slave not respond!
>
```

Telnet Command: switch on

This command is used to turn on the auto discovery for external devices.

Example

```
> switch on
Enable Extrnal Device auto discovery!
```

Telnet Command: switch off

This command is used to turn off the auto discovery for external devices.

Example

```
> switch off
Disable External Device auto discovery!
```

Telnet Command: switch list

This command is used to display the connection status of the switch.

Example

```
> switch list?
No.      Mac          IP          status  Dur Time  CWMP  ACS_CTL  Mod
el_Name  firmware_version
-----
-----
[1] 00-1d-aa-0c-cd-08 192.168.1.11 On-Line  00:44:35  -1    -1
G2280
```

Telnet Command: switch clear

This command is used to reset the switch table and reboot the router.

Syntax

```
switch clear [idx]
```

Syntax Description

Parameter	Description
<i>idx</i>	It means the index number of each item shown on the table. The range is from 1 to 8.
<i>-f</i>	It means to clear all of the data.

Example

```
> switch clear 1
Switch Data clear successful

> switch clear -f
Switch Data clear successful
```

Telnet Command: switch query

This command is used to enable or disable the switch query.

Example

```
> switch query on
Extern Device status query is Enable

> switch query off
Extern Device status query is Disable
```

Telnet Command: switch syslog

This command is used to enable or disable the external device syslog.

Example

```
> switch syslog on
Extern Device status is Enable

> switch syslog off
Extern Device status is Disable
```

Telnet Command: sys admin

This command is used for RD engineer to access into test mode of Vigor router.

Telnet Command: sys adminuser

This command is used to create user account and specify LDAP server. The server will authenticate the local user who wants to access into the web user interface of Vigor router.

Syntax

`sys adminuser [option]`

`sys adminuser edit [index] username password`

Syntax Description

Parameter	Description
<i>option</i>	Available options includes: Local [0-1] LDAP [0-1] edit [INDEX] delete [INDEX] view [INDEX]
<i>Local [0-1]</i>	0 - Disable the local user. 1 - Enable the local user.
<i>LDAP [0-1]</i>	0 - Disable the LDAP. 1 - Enable the LDAP.
<i>edit [INDEX] username password</i>	Edit an existed user account or create a new local user account. [INDEX] - 1 ~8. There are eight profiles to be added / edited. Username - Type a new name for local user. Password - Type a password for local user.
<i>delete [INDEX]</i>	Delete a local user account.
<i>view [INDEX]</i>	Show the user account/password detail information.

Example

```

> sys adminuser Local 1
Local User has enabled!
> sys adminuser LDAP 1
LDAP has enabled!
> sys adminuser edit 1 carrie test123
Updated!
> sys adminuser view 1

Index:1
User Name:carrie
User Password:test123

```

Telnet Command: sys board

This command is used to disable/enable and configure the panel control.

Syntax

```

sys board button def <on/off>
sys board button wlan <on/off>
sys board led control <on/off>
sys board led sleepMode <on/off>
sys board led sleepMode time <minute>
sys board usb <p1/p2> <on/off>

```

Syntax Description

Parameter	Description
-----------	-------------

<i>button def <on/off></i>	The default reset button will be invalid if turn it off. On - The button is valid. Off - The button is invalid.
<i>Button wlan <on/off></i>	The wireless button will be invalid if turn it off. On - The button is valid. Off - The button is invalid.
<i>led control <on/off></i>	All LEDs on the front panel will be invalid if turn it off. On - The LEDs are valid. Off - The LEDs are invalid.
<i>led sleepMode <on/off></i>	All LEDs on the front panel will be set in sleep mode. On - The sleep mode is on. Off - The sleep mode is off. If the sleep mode is on, push the "wireless button" and the "factory reset button" to turn the LED on (even the buttons are disabled).
<i>led sleepMode time [minutes]</i>	After enableing the sleep mode for all LEDs, they will sleep after the minutes configured here. Minutes: Enter the number of the time.
<i>usb <p1/p2> <on/off></i>	The USB port <p1/p2> will be invalid if turn it off. On - The port is valid. Off - The port is invalid.

Example

```
> sys board usb p2 off
USB port2 power is off now.

> sys board usb p2 on
USB port2 power is on now.
```

Telnet Command: sys bonjour

This command is used to disable/enable and configure the Bonjour service.

Syntax

sys bonjour [-<command> <parameter> | ...]

Syntax Description

Parameter	Description
-e <enable>	It is used to disable/enable bonjour service (0: disable, 1: enable).
-h <enable>	It is used to disable/enable http (web) service (0: disable, 1: enable).
-t <enable>	It is used to disable/enable telnet service (0: disable, 1: enable).
-f <enable>	It is used to disable/enable FTP service (0: disable, 1: enable).
-s <enable>	It is used to disable/enable SSH service (0: disable, 1: enable).
-p <enable>	It is used to disable/enable printer service (0: disable, 1: enable).
-6 <enable>	It is used to disable/enable IPv6 (0: disable, 1: enable).

Example

```
> sys bonjour -s 1
>
```

Telnet Command: sys cfg

This command reset the router with factory default settings. When a user types this command, all the configuration will be reset to default setting.

Syntax

sys cfg default

sys cfg status

Syntax Description

Parameter	Description
default	It means to reset current settings with default values.
status	It means to display current profile version and status.

Example

```
> sys cfg status
Profile version: 4.0.0   Status: 1 (0x9df515cf)
>
```

Telnet Command: sys cmdlog

This command displays the history of the commands that you have typed.

Example

```
> sys cmdlog
[1] sys board ?
[2] sys board button ?
[3] sys led ?
[4] sys board led ?
[5] sys board led sleepMode ?
[6] sys board usb ?
[7] sys board usb p2 off
[8] sys board usb p2 on
[9] sys ?
[10] sys bonjour ?
[11] sys cfg ?
[12] sys cfg status
[13] sys cmdlog ?
[14] sys cmdlog
```

Telnet Command: sys ftpd

This command displays current status of FTP server.

Syntax

`sys ftpd on`

`sys ftpd off`

Syntax Description

Parameter	Description
<i>on</i>	It means to turn on the FTP server of the system.
<i>off</i>	It means to turn off the FTP server of the system.

Example

```
> sys ftpd on
% sys ftpd turn on !!!
```

Telnet Command: sys domainname

This command can set and remove the domain name of the system when DHCP mode is selected for WAN.

Syntax

`sys domainname <wan1> <Domain Name Suffix>`

`sys domainname <wan1> clear`

Syntax Description

Parameter	Description
<wan1>	It means to specify WAN interface for assigning a name for it.
<Domain Name Suffix>	It means the name for the domain of the system. The maximum number of characters that you can set is 39.
clear	It means to remove the domain name of the system.

Example

```

> sys domainname wan1 clever
> DrayTek> sys domainname ?
% sys domainname <wan1> <Domain Name Suffix (max. 39 characters)>
% sys domainname <wan1> clear
% Now: wan1 == clever
>

```

Telnet Command: sys iface

This command displays the current interface connection status (UP or Down) with IP address, MAC address and Netmask for the router.

Example

```

> sys iface
Interface 0 Ethernet:
Status: UP
IP Address: 192.168.1.1      Netmask: 0xFFFFFF00 (Private)
IP Address: 0.0.0.0        Netmask: 0xFFFFFFFF
MAC: 14-49-BC-0A-8A-B8
Interface 3 PPPoE:
Status: UP
IP Address: ---           Netmask: 0xFFFFFFFF
MAC: 14-49-BC-0A-8A-B9
Interface 4 Ethernet:
Status: UP
IP Address: 0.0.0.0        Netmask: 0x00000000
MAC: 14-49-BC-0A-8A-BA
Interface 5 Ethernet:
Status: UP
IP Address: 0.0.0.0        Netmask: 0x00000000
MAC: 14-49-BC-0A-8A-BB
Interface 7 Ethernet:
Status: DOWN
IP Address: 0.0.0.0        Netmask: 0x00000000
MAC: 14-49-BC-0A-8A-BD
Interface 8 Ethernet:
Status: DOWN
IP Address: 0.0.0.0        Netmask: 0x00000000
MAC: 14-49-BC-0A-8A-BE
--- MORE ---  ['q': Quit, 'Enter': New Lines, 'Space Bar': Next Page] ---
>

```

Telnet Command: sys name

This command can set and remove the name for the router when DHCP mode is selected for WAN.

Syntax

sys name <wan1> <ASCII string>

sys name <wan1> clear

Syntax Description

Parameter	Description
<wan1>	It means to specify WAN interface for assigning a name for it.
ASCII string>	It means the name for router. The maximum character that you can set is 39.

Example

```
> sys name wan1 drayrouter
> sys name ?
% sys name <wan1/wan2> <ASCII string (max. 20 characters)>
% sys name <wan1/wan2> clear
% Now: wan1 == drayrouter, wan2 ==
```

Note: Such name can be used to recognize router's identification in SysLog dialog.

Telnet Command: `sys passwd`

This command allows users to set password for the administrator.

```
sys passwd <old password> <new password>
```

Syntax Description

Parameter	Description
<i>old password</i>	Enter the old password.
<i>new password</i>	Enter a string as the new password for administrator. The maximum character that you can set is 83.

Example

```
> sys passwd admin admin123
Password change successful !!!
```

Telnet Command: `sys reboot`

This command allows users to restart the router immediately.

Example

```
> sys reboot
>
```

Telnet Command: `sys autoreboot`

This command allows users to restart the router automatically within a certain time.

Syntax

```
sys autoreboot <on/off/hour(s)>
```

Syntax Description

Parameter	Description
<i><on/off></i>	On - It means to enable the function of auto-reboot. Off - It means to disable the function of auto-reboot.
<i><hours></i>	It means to set the time schedule for router reboot. For example, if you type "2" in this field, the router will reboot with an interval of two hours.

Example

```
> sys autoreboot on
autoreboot is ON
> sys autoreboot 2
autoreboot is ON
autoreboot time is 2 hour(s)
```

Telnet Command: sys commit

This command allows users to save current settings to FLASH. Usually, current settings will be saved in SRAM. Yet, this command will save the file to FLASH.

Example

```
> sys commit
>
```

Telnet Command: sys tftpd

This command can turn on TFTP server for upgrading the firmware.

Example

```
> sys tftpd
% TFTP server enabled !!!
```

Telnet Command: sys cc

This command can display current country code and wireless region of this device.

Example

```
> sys cc
Country Code      : 0x 0 [International]
Wireless Region Code: 0x30
>
```

Telnet Command: sys version

This command can display current version for the system.

Example

```
> sys version
Router Model: Vigor2135ac   Version: 4.2.1.2_STD English
Profile version: 4.0.0     Status: 1 (0x9df515cf)
Router IP: 192.168.1.1     Netmask: 255.255.255.0
Firmware Build Date/Time: Nov 25 2020 14:24:25
Router Name: DrayTek
Revision: 94071 V421
Router serial no: None
>
```

Telnet Command: sys qrybuf

This command can display the system memory status and leakage list.

Example

```
> sys qrybuf
System Memory Status and Leakage List

Buf sk_buff ( 200B), used#: 1647, cached#: 30
Buf KMC4088 (4088B), used#: 0, cached#: 8
Buf KMC2552 (2552B), used#: 1641, cached#: 42
Buf KMC1016 (1016B), used#: 7, cached#: 1
Buf KMC504 ( 504B), used#: 8, cached#: 8
Buf KMC248 ( 248B), used#: 26, cached#: 22
Buf KMC120 ( 120B), used#: 67, cached#: 61
Buf KMC56 ( 56B), used#: 20, cached#: 44
Buf KMC24 ( 24B), used#: 58, cached#: 70
Dynamic memory: 13107200B; 4573168B used; 190480B/0B in level 1/2 cache.

FLOWTRACK Memory Status
# of free = 12000
# of maximum = 0
# of flowstate = 12000
# of lost by siganture = 0
# of lost by list = 0
```

Telnet Command: sys pollbuf

This command can turn on or turn off polling buffer for the router.

Syntax

```
sys pollbuf <on/off>
```

Syntax Description

Parameter	Description
<i>on</i>	It means to turn on pulling buffer.
<i>off</i>	It means to turn off pulling buffer.

Example

```
> sys pollbuf on
% Buffer polling is on!

> sys pollbuf off
% Buffer polling is off!
```

Telnet Command: sys britask

This command can improve triple play quality.

Syntax

sys britask <on/off>

Syntax Description

Parameter	Description
<i>on</i>	It means to turn on the bridge task for improving the triple play quality.
<i>off</i>	It means to turn off the bridge task.

Example

```
> sys britask on
% bridge task is ON, now
```

Telnet Command: sys tr069

This command can set CPE settings for applying in VigorACS.

Syntax

sys tr069 get <parm> <option>

sys tr069 set <parm> <value>

sys tr069 getnoti <parm>

sys tr069 setnoti <parm> <value>

sys tr069 log

sys tr069 debug <on/off>

sys tr069 save

sys tr069 inform <event code>

sys tr069 port <port num>

sys tr069 cert_auth<on/off>

sys tr069 only_standard_parm <on/off>

sys tr069 notify -S

sys tr069 notify -n <on/off>

sys tr069 notify -l <on/off>

sys tr069 notify -c <on/off>

sys tr069 notify -b <on/off>

sys tr069 notify -B "<WAN number> <Medium threthold> <High threthold> <TX Speed>Mb <RX Speed>Mb"

Syntax Description

Parameter	Description
<i>get <parm> <option></i>	It means to get parameters for tr-069. option=<nextlevel>: only gets nextlevel for GetParameterNames.
<i>set <parm> <value></i>	It means to set parameters for tr-069.
<i>getnoti <parm></i>	It means to get parameter notification value.

<i>setnoti <parm> <value></i>	It means to set parameter notification value.
<i>log</i>	It means to display the TR-069 log.
<i>debug <on/off></i>	on: turn on the function of sending debug message to syslog. off: turn off the function of sending debug message to syslog.
<i>save</i>	It means to save the parameters to the flash memory of the router.
<i>Inform <event code></i>	It means to inform parameters for tr069 with different event codes. [event code] includes: 0-"0 BOOTSTRAP", 1-"1 BOOT", 2-"2 PERIODIC", 3-"3 SCHEDULED", 4-"4 VALUE CHANGE", 5-"5 KICKED", 6-"6 CONNECTION REQUEST", 7-"7 TRANSFER COMPLETE", 8-"8 DIAGNOSTICS COMPLETE", 9-"M Reboot"
<i>port <port num></i>	It means to change tr069 listen port number.
<i>cert_auth <on/off></i>	on: turn on certificate-based authentication. off: turn off certificate-based authentication.
<i>only_standard_parm <on/off></i>	It means to turn on or off to exclude all the Vendor-Specific ("X_") parameters, and only send out standard parameters.
<i>notify -n <on/off></i>	It means to set CPE notification settings. It means to / not to record the CPE notify log on the Syslog. on: Record on the Syslog. off: Not record on the Syslog.
<i>notify -l <on/off></i>	It means to / not to record the web login log on the Syslog. on: Record on the Syslog. off: Not record on the Syslog.
<i>notify -c <on/off></i>	It means to / not to record the web changed log on the Syslog. on: Record on the Syslog. off: Not record on the Syslog.
<i>notify -b <on/off></i>	It means to / not to record the bandwidth utilization log on the Syslog. on: Record on the Syslog. off: Not record on the Syslog.
<i>notify -B "<WAN number> <Medium threthold> <High threthold> <TX Speed>Mb <RX Speed>Mb"</i>	It means to set bandwidth utilization setting. <WAN number>: Enter the index number of WAN interface(s). <Medium threthold>: Enter a value. <High threthold>: Enter a value. <TX Speed>Mb: Enter a value. <RX Speed>Mb: Enter a value.
<i>-S</i>	Show the CPE notification settings.

Example

```
> sys tr069 get InternetGatewayDevice.ManagementServer.
Total number of parameter is 49
Total content length of parameter is 3196
```

```

Telnet Command: sys alg

This command can enable or disable ALG (Application Layer Gateway) master switch.

Syntax

```
sys alg <1/0>
```

Syntax Description

Parameter	Description
1	It means to enable ALG master switch.
0	It means to disable ALG master switch.

Example

```

> sys alg -e 1
Enable ALG

> sys alg
Usage: sys alg <command> <parameter>
-e: enable ALG (0:disable, 1:enable)

Current ALG status
-ALG Master Switch: Enabled

```

Telnet Command: sys sip_alg

This command can turn on/off SIP ALG (Application Layer Gateway) for traversal.

Syntax

```
sys sip_alg [<command> <parameter>|...]
```

Syntax Description

Parameter	Description
<i>[<command> <parameter> ...]</i>	The available commands with parameters are listed below. <i>[...]</i> means that you can type in several commands in one line.
<i>-e <0/1></i>	0: Disable the function of SIP ALG. 1: Enable the function of SIP ALG.
<i>-p <parameter></i>	It means to set the listening port for SIP ALG. <i><parameter></i> : Ranges from 1 to 65535.
<i>-u</i>	It means to enable or disable the listen along UDP path setting. 0: Disable 1: Enable
<i>-t</i>	It means to enable or disable the listen along TCP path setting. 0: Disable 1: Enable

Example

```
> sys sip_alg -e 1
  Enable SIP ALG

> sys sip_alg -p 65535
  Current listening port: 65535

DrayTek> sys sip_alg ?
Usage: sys sip_alg <command> <parameter>
  -e: enable SIP ALG (0:disable, 1:enable)
  -p: set your listening port for SIP ALG
  -u: enable listen along UDP path (0:disable, 1:enable)
  -t: enable listen along TCP path (0:disable, 1:enable)

Current SIP ALG status
  -ALG Master Switch: Enabled
  -SIP ALG: Enabled
  -Listen along UDP path: Yes
  -Listen along TCP path: Yes
  -Listening Port: 65535
  -Max sipalg session num: 256
  -Remain sipalg session num: 256
```

Telnet Command: sys rtsp_alg

This command can turn on/off RTSP ALG (Application Layer Gateway) for traversal.

Syntax

```
sys rtsp_alg [<command> <parameter>|...]
```

Syntax Description

Parameter	Description
<i>[<command></i>	The available commands with parameters are listed below.

<code><parameter>/[...]</code>	<code>[...]</code> means that you can type in several commands in one line.
<code>-e <0/1></code>	0: Disable the function of RTSP ALG. 1: Enable the function of RTSP ALG.
<code>-p <parameter></code>	It means to set the listening port for RTSP ALG. <code><parameter></code> : Ranges from 1 to 65535.
<code>-u</code>	It means to enable or disable the listen along UDP path setting. 0: Disable 1: Enable
<code>-t</code>	It means to enable or disable the listen along TCP path setting. 0: Disable 1: Enable
<code>-v</code>	It displays RTP and RTCP portmap information of RTSP ALG.

Example

```

> sys rtsp_alg -e 1
  Enable RTSP ALG

> sys rtsp_alg -p 60000
  Current listening RTSP Port: 60000

> sys rtsp_alg -v
  Current Open PortMap Number of RTSP ALG: 0

> sys rtsp_alg ?
Usage: sys rtsp_alg <command> <parameter>
-e: enable RTSP ALG (0:disable, 1:enable)
-p: set your listening port for RTSP ALG
-u: enable listen along UDP path (0:disable, 1:enable)
-t: enable listen along TCP path (0:disable, 1:enable)
-v: show rtp and rtcp portmap information of RTSP ALG

Current RTSP ALG status
-ALG Master Switch: Enabled
-RTSP ALG: Enabled
-Listen along UDP path: Yes
-Listen along TCP path: Yes
-Listening Port: 60000
-Max RTSP session num: 256
-Remain RTSP session num: 256

```

Telnet Command: sys license

This command can process the system license.

Syntax

sys license *reset_regser*

sys license *licera*

sys license *licifno* <AUTO/WAN#>

sys license *licalias* <index>

sys license *lic_trigger*

sys license *licelog*

Syntax Description

Parameter	Description
<i>reset_regser</i>	It means the license register server setting. or register service in portal??
<i>licera</i>	It means to erase license setting.
<i>licifno</i> <AUTO/WAN#>	It means license and signature download interface setting.
<i>licalias</i> <index>	It means to specify an IP alias by entering the index number of the IP alias profile.
<i>lic_trigger</i>	It means to trigger the license.
<i>licelog</i>	It means to show the authentication log.

Example

```
> sys license licifno wan1  
Download interface is set as "WAN1" now.
```

Telnet Command: sys diag_log

This command is used for RD debug.

Syntax

`sys diag_log <status/ enable/ disable/ flush/ lineno <w> | level <x> | feature <on/off><y> | voip_feature <on/off> <vf_name> | log>`

Syntax Description

Parameter	Description
<i>status</i>	It means to show the status of diagnostic log.
<i>enable</i>	It means to enable the function of diag_log.
<i>disable</i>	It means to disenable the function of diag_log.
<i>flush</i>	It means the flush log buffer.
<i>lineno <w></i>	It means the total lines for displaying message. w - Available value ranges from 100 to 50000.
<i>level <x></i>	It determines the level of data displayed. x - Available value ranges from 0 to 12. The larger the number is, the detailed the data is displayed.
<i>feature <on/off> <y></i>	It is used to specify the function of the log. Supported features include SYS and DSL (Case-Insensitive). Default setting is "on" for "DSL".
<i>voip_feature <on/off> <vf_name></i>	It means VoIP feature. Type on to enable the feature or type off to disable the feature. vf_name: available settings include DRVTAPI, DRVMMC, DRVMPS, DRVFXO, DRVHAL, PSMPHONE, PSMSUPP, PSM, FXO, PSMISDN, DTMFPSE, CALLERID (Case-Insensitive).
<i>log</i>	It means the dump log buffer.

Example

```
> sys diag_log status
Status:
diag_log is Enabled.
lineno : 10000.
level : 3.
Enabled feature: SYS DSL
> sys diag_log log
0:00:02 [DSL] Current modem firmware: AnnexA_548006_544401
0:00:02 [DSL] Modem firmware feature: 5, ADSL_A, VDSL2
0:00:02 [DSL] xtseCfg=04 00 04 00 0c 01 00 07
0:00:02 [DSL] don't have last showtime mode!! set next mode to VDSL!!

```

Telnet Command: sys arp_AutoReq

This command is used to enable / disable the function that Vigor router sends ARP request to the connected device(s) periodically.

Syntax

sys arp_AutoReq -d <value>

Syntax Description

Parameter	Description
-d [value]	Disable the function of ARP auto request. 0 - Enable 1 - Disable

Example

```

> sys arp_AutoReq -d 1
Arp auto-request disable.

```

Telnet Command: sys daylightsave

This command is used to configure day light saving.

Syntax

sys daylightsave [-<command> <parameter> | ...]

Syntax Description

Parameter	Description
[<command><parameter> ...]	The available commands with parameters are listed below. [...] means that you can type in several commands in one line.
-v	Display the daylight saving settings.
-r	Set to factory default setting.
-e [1/0]	Enable (1) / disable (0) daylight saving.
-t [0/1/2]	Specify the saving type for daylight setting. 0 - Default 1 - Time range 2 - Yearly
-s <year> <month> <day> <hour>	Set the detailed settings of the starting day for time range type. year - must be the year after 2013. month - 1 - 12 day - 1 - 31 hour - 0 - 23 e.g., sys daylightsave -s 2014 3 10 12

<code>-d <year> <month> <day> <hour></code>	Set the detailed settings of the ending day for time range type. year - After 2013. month - 1 ~ 12 day - 1 ~ 31 hour - 0 ~ 23 e.g., sys daylightsave -d 2014 9 10 12
<code>-y <month> <th weekday> <day in week> <hour></code>	Set the detailed settings of the starting day for yearly type. month - 1 ~ 12 th weekday - 1 ~ 5, 9: last week day in week - 0:Sun, 1:Mon, 2:Tue, 3:Wed, 4:Thu, 5: Fri, 6:Sat hour - 0 ~ 23 e.g., sys daylightsave -y 9 1 0 14
<code>-z <month> <th weekday> <day in week> <hour></code>	Set the detailed settings of the ending day for yearly type. month - 1 ~ 12 th weekday - 1 ~ 5, 9: last week day in week - 0:Sun, 1:Mon, 2:Tue, 3:Wed, 4:Thu, 5: Fri, 6:Sat hour - 0 ~ 23 e.g., sys daylightsave -z 3 1 6 14

Example

```
> sys daylightsave -y 9 1 0 14
% Start: Yearly on Sep 1th Sun 14:00
>
```

Telnet Command: sys dnsCacheTbl

This command is used to configure TTL settings which will be displayed in DNS Cache table.

Syntax

sys dnsCacheTbl [*<command><parameter>/...*]

Syntax Description

Parameter	Description
<i>[<command> <parameter>/...]</i>	The available commands with parameters are listed below. <i>[...]</i> means that you can type in several commands in one line.
<i>-l</i>	It means to show DNS IPv4 entry in DNS cache table.
<i>-s</i>	It means to show DNS IPv6 entry in DNS cache table.
<i>-v</i>	It means to show TTL limit value in DNS cache table.
<i>-t <tll></i>	It means to set TTL limit value. <tll>: 0(no limit) or an number greater than 5.
<i>-c</i>	It means to clear the DNS cache table.

Example

```
> sys daylightsave -y 9 1 0 14
% Start: Yearly on Sep 1th Sun 14:00
DrayTek> sys dnsCacheTbl -t 50
% Set TTL limit: 50 seconds.
% When TTL larger than 50s , delete the DNS entry in the router's DNS cache
tabl
```

```
e.
> sys dnsCacheTbl -v
% TTL limit: 50 seconds
% When TTL larger than 50s , delete the DNS entry in the router's DNS cache
tabl
>
```

Telnet Command: sys syslog

This command is used to configure day light saving.

Syntax

`sys syslog -a <enable> [-<command> <parameter> | ...]`

Syntax Description

Parameter	Description
<code>[<command><parameter> ...]</code>	The available commands with parameters are listed below. [...] means that you can type in several commands in one line.
<code>-a <1/0></code>	Enable (1) or disable (0) Syslog Access Setup.
<code>-s <1/0></code>	Enable (1) or disable (0) Syslog Save to Syslog Server.
<code>-i <IP address></code>	Define the IP address of the Syslog server.
<code>-d <port number></code>	Define the port number (1 ~ 65535) as the destination port.
<code>-u <1/0></code>	Enable (1) or disable (0) Syslog Save to USB Disk.
<code>-m <1/0></code>	Enable (1) or disable (0) Mail Syslog.
<code>-f <1/0></code>	Enable (1) or disable (0) Firewall Log.
<code>-v <1/0></code>	Enable (1) or disable (0) VPN Log.
<code>-e <1/0></code>	Enable (1) or disable (0) User Access Log.
<code>-c <1/0></code>	Enable (1) or disable (0) Call Log.
<code>-w <1/0></code>	Enable (1) or disable (0) WAN Log.
<code>-r <1/0></code>	Enable (1) or disable (0) Router/DSL Information.
<code>-t <1/0></code>	Enable (1) or disable (0) AlertLog Setup.
<code>-o <port number></code>	Define the port number (1 ~ 65535) for AlertLog.

Example

```
> sys syslog -a 1 -s 1 -i 192.168.1.25 -d 514
>
```

Telnet Command: sys mailalert

This command is used to configure settings for syslog mail alert.

Syntax

`sys mailalert [-<command> <parameter>]`

Syntax Description

Parameter	Description
<code>[<command><parameter> ...]</code>	The available commands with parameters are listed below. [...] means that you can type in several commands in one line.

<code>-e <0/1></code>	Enable/disable Mail Alert. 0 - Disable. 1 - Enable.
<code>-w <0/1/2/...></code>	Set Interface (Physical) Any/WAN1/WAN2/WAN... and etc.
<code>-x <WAN IP Alias index></code>	Set WAN IP Alias. Index 1 is reserved and must set an interface first.
<code>-i <SMTP Server IP></code>	Set IP Address for SMTP server.
<code>-o <SMTP Server Port></code>	Set port number for SMTP server..
<code>-a <Mail Address></code>	Set E-mail address for alert mail reciver.
<code>-r <Mail Address></code>	Set E-mail Address for mail return.
<code>-s <0/1></code>	Enable/disable the function of Use SSL. 0 - Disable. 1 - Enable.
<code>-h <0/1></code>	Enable/disable SMTP Authentication. 0 - Disable. 1 - Enable.
<code>-u <Username></code>	Set username for SMTP Authentication.
<code>-p <Password></code>	Set password for SMTP Authentication.
<code>-l <type><0/1></code>	Enable / disable mail alert for different types. Number 0 ~ 6 represent different types. "0 <0/1>" : Enable/Disable Mail Alert of the DoS Attack. "1 <0/1>" : Enable/Disable Mail Alert of the APPE. "2 <0/1>" : nable/Disable Mail Alert of the VPN Log. "3 <0/1>" : Enable/Disable Mail Alert of the APPE Signature. "6 <0/1>" : Enable/Disable Mail Alert of the Reboot Debug Log. In which, 0 - Disable. 1 - Enable.
<code>-f</code>	Reset Mail Alert setting to factory default.
<code>-v</code>	Show current Mail Alert setting.
<code>-R <0/1></code>	Set Mail Alert Reboot debug log mode. 0: Limited Mode 1: Unlimited Mode.

Example

```

> sys mailalert -e 1
Set Enable Mail Alert.
> sys mailalert -v
----- Current setting for Mail Alert -----
Mail Alert: Enable
SMTP Server IP Address: 0.0.0.0
SMTP Server Port: 25
Alert Mail Reciver E-mail Address:
Mail Return E-mail Address:
Use SSL: Disable
SMTP Authentication: Disable
Username for SMTP Authentication:
Password for SMTP Authentication:
Mail Alert for DoS Attack: Enable.
Mail Alert for APPE: Enable.
Mail Alert for VPN Log: Enable.
Mail Alert for APPE Signature: Disable.
Mail Alert for Reboot Debug Log: Disable, Mode: Limited.
-----
>

```

Telnet Command: sys time

This command is used to configure system time and date.

Syntax

sys time server <domain>

sys time inquire

sys time show

sys time zone <index>

Syntax Description

Parameter	Description
<i>domain</i>	Enter the domain name of the time server. The maximum length is 39 characters.
<i>index</i>	Different number means different time zone. 1 - GMT-12:00 Eniwetok, Kwajalein 2 - GMT-11:00 Midway Island, Samoa 3 - GMT-10:00 Hawaii 4 - GMT-09:00 Alaska 5 - GMT-08:00 Pacific Time (US & Canada) 6 - GMT-08:00 Tijuana 7 - GMT-07:00 Mountain Time (US & Canada) 8 - GMT-07:00 Arizona 9 - GMT-06:00 Central Time (US & Canada) 10 - GMT-06:00 Saskatchewan 11 - GMT-06:00 Mexico City, Tegucigalpa 12 - GMT-05:00 Eastern Time (US & Canada) 13 - GMT-05:00 Indiana (East) 14 - GMT-05:00 Bogota, Lima, Quito 15 - GMT-04:00 Atlantic Time (Canada) 16 - GMT-04:00 Caracas, La Paz 17 - GMT-04:00 Santiago 18 - GMT-03:30 Newfoundland 19 - GMT-03:00 Brasilia 20 - GMT-03:00 Buenos Aires, Georgetown 21 - GMT-02:00 Mid-Atlantic 22 - GMT-01:00 Azores, Cape Verde Is. 23 - GMT Greenwich Mean Time : Dublin 24 - GMT Edinburgh, Lisbon, London 25 - GMT Casablanca, Monrovia 26 - GMT+01:00 Belgrade, Bratislava 27 - GMT+01:00 Budapest, Ljubljana, Prague 28 - GMT+01:00 Sarajevo, Skopje, Sofija 29 - GMT+01:00 Warsaw, Zagreb 30 - GMT+01:00 Brussels, Copenhagen 31 - GMT+01:00 Madrid, Paris, Vilnius 32 - GMT+01:00 Amsterdam, Berlin, Bern 33 - GMT+01:00 Rome, Stockholm, Vienna 34 - GMT+02:00 Bucharest 35 - GMT+02:00 Cairo 36 - GMT+02:00 Helsinki, Riga, Tallinn 37 - GMT+02:00 Athens, Istanbul, Minsk 38 - GMT+02:00 Jerusalem 39 - GMT+02:00 Harare, Pretoria 40 - GMT+03:00 Volgograd 41 - GMT+03:00 Baghdad, Kuwait, Riyadh 42 - GMT+03:00 Nairobi

43 - GMT+03:00 Moscow, St. Petersburg
44 - GMT+03:30 Tehran
45 - GMT+04:00 Abu Dhabi, Muscat
46 - GMT+04:00 Baku, Tbilisi
47 - GMT+04:30 Kabul
48 - GMT+05:00 Ekaterinburg
49 - GMT+05:00 Islamabad, Karachi, Tashkent

71 - GMT+11:00 New Caledonia
72 - GMT+12:00 Fiji, Kamchatka, Marshall Is.
73 - GMT+12:00 Auckland, Wellington

Example

```
> sys time zone 8
Set Time Zone OK

> sys time show
***** System Time *****
Current System Time: [2000 Jan 01 Sat 21:28:36]
Time Server: [pool.ntp.org]
Time Zone Index: [8]. GMT-07:00
Send NTP Request Through: Auto
*****
>
```

Telnet Command: sys dashboard

This command is used to display / hide items (such as System Information, Interface...) on dashboard.

Syntax

```
sys dashboard [-<command> <value> | ... ]
```

```
sys dashboard show
```

Syntax Description

Parameter	Description
-----------	-------------

<p>[<command> <value>/...]</p>	<p>The available commands with parameters are listed below. [...] means that you can type in several parameters in one line. <command> "0 ~ 9" and "a" represent different sections to be displayed on the dashboard.</p> <ul style="list-style-type: none"> 0 : Front Panel 1 : System Information 2 : IPv4 LAN Information 3 : IPv4 Internet Access 4 : IPv6 Internet Access 5 : Interface 6 : Security 7 : System Resource 8 : LTE Status 9 : Quick Access a : VoIP <p><value> 1 : Enable 0 : Disable</p>
<p>show</p>	<p>Display current status (enabled /disabled) for each item.</p>

Example

```

> sys dashboard -0 1
Front Panel enabled
> sys dashboard show
Front Panel enabled
System Information enabled
IPv4 LAN Information enabled
IPv4 Internet Access enabled
IPv6 Internet Access enabled
Interface enabled
Security enabled
System Resource enabled
LTE Status enabled
Quick Access enabled
VoIP enabled
>

```

Telnet Command: testmail

This command is used to display current settings for sending test mail.

Example

```

> testmail
Send out test mail
Mail Alert:[Enable]
Interface :Any
WAN_Alias index:[0]
SMTP_Server:[0.0.0.0]
SMTP_Port:[25]
Mail to:[]
Return-Path:[]
Connection Security:[Plaintext]

```

Telnet Command: upnp off

This command can close UPnP function.

Example

```
>upnp off
UPNP say bye-bye
```

Telnet Command: upnp on

This command can enable UPnP function.

Example

```
>upnp on
UPNP start.
```

Telnet Command: upnp nat

This command can display IGD NAT status.

Example

```
> upnp nat ?
***** IGD NAT Status *****
((0))
InternalClient >>0.0.0.0<<, RemoteHost >>0.0.0.0<<
InternalPort >>0<<, ExternalPort >>0<<
PortMapProtocol >>(null)<<
The tmpvirtual server index >>0<<
PortMapLeaseDuration >>0<<, PortMapEnabled >>0<<
<NULL>

((1))

PortMapLeaseDuration >>0<<, PortMapEnabled >>0<<
<NULL>

--- MORE ---  ['q': Quit, 'Enter': New Lines, 'Space Bar': Next Page] ---
```

Telnet Command: upnp service

This command can display the information of the UPnP service. UPnP service must be enabled first.

Example

```
> upnp on
UPNP start.

> upnp service
>>>> SERVICE TABLE1 <<<<<
  serviceType urn:schemas-microsoft-com:service:OSInfo:1
  serviceId   urn:microsoft-com:serviceId:OSInfo1
  SCPDURL     /upnp/OSInfo.xml
  controlURL  /OSInfo1
  eventURL    /OSInfoEvent1
  UDN         uuid:f6c9fedc-6c5d-41f4-992e-1449bc0a8ab8

>>>> SERVICE TABLE2 <<<<<
  serviceType

  eventURL
  UDN         uuid:2b84726d-d351-43ab-b96a-f601ff9818b3.
...

```

Telnet Command: upnp subscribe

This command can show all UPnP services subscribed.

Example

```
> upnp on
UPNP start.
> upnp subscribe
>>>> (1) serviceType urn:schemas-microsoft-com:service:OSInfo:1

>>>> (2) serviceType
urn:schemas-upnp-org:service:WANCommonInterfaceConfig:1

>>>> (3) serviceType
urn:schemas-upnp-org:service:WANPOTSLinkConfig:1

```

```

>>>> (4) serviceType urn:schemas-upnp-org:service:WANPPPConnection:1

>>>> (5) serviceType urn:schemas-upnp-org:service:WANIPConnection:1

>
.

```

Telnet Command: upnp tmpvs

This command can display current status of temp Virtual Server of your router.

Example

```

Vigor> upnp tmpvs
***** Temp virtual server status *****

((0))
real_addr >>192.168.1.10<<, pseudo_addr >>172.16.3.229<<
real_port >>0<<, pseudo_port >>0<<
hit_portmap_index >>0<<
The protocol >>TCP<<
time >>0<<

((1))
real_addr >>0.0.0.0<<, pseudo_addr >>0.0.0.0<<
real_port >>0<<, pseudo_port >>0<<
hit_portmap_index >>0<<
The protocol >>0<<
time >>0<<
--- MORE ---  ['q': Quit, 'Enter': New Lines, 'Space Bar': Next Page] ---

```

Telnet Command: upnp wan

This command is used to specify WAN interface to apply UPnP.

Syntax

upnp wan <n>

Syntax Description

Parameter	Description
<n>	It means to specify WAN interface (0 to 3) to apply UPnP. n=0, it means to auto-select WAN interface. n=1, WAN1 n=2, WAN2

Example

```

> upnp wan 1
use wan1 now.

```

Telnet Command: usb list

This command is use to display the information about the brand name and model name of the USB modems which are supported by Vigor router.

Example

```
> usb list ?
Brand          Module          Standard
-----
4G system      XSPlug P3       3.5G           Y

Telnet Command: usb user

This command is used to set profiles for FTP/SMB users.

Syntax Description

usb user add <Index> <Username> <Password> <Permission> <Home path>

usb user rm <Index>

usb user enable <Index>

usb user disable <Index>

usb user list

Syntax Description

Parameter	Description
add <Index> <Username> <Password> <Permission> <Home path>	<p>Add a new user profile.</p> <p><Index>: It means the index number of the user profile. There are 16 profiles allowed to be configured. So the range of such option is 1 ~ 16.</p> <p><Username>: Enter a text (maximum 131 characters) as the username for the user profile.</p> <p><Password>: Enter a text (maximum 131 characters) as the password for the user profile.</p> <p><Permission>: Specify the action (RWDLCR) permitted. If one of the actions is not allowed, simple type "-" instead.</p>

	R - Read File. W - Write File. D - Delete File. L - List directory. C - Create directory. R - Remove selected directory. <Home path>: Set the path (maximum 159 characters) for the USB user profile.
<i>rm</i> <Index>	Delete an existed user profile. <Index>: It means the index number of the user profile.
<i>enable</i> <Index>	Enable a user profile. <Index>: It means the index number of the user profile.
<i>disable</i> <Index>	Disable a user profile. <Index>: It means the index number of the user profile.
<i>list</i>	Display all of the user profile.

Example

```
> usb user add 1 root 1234 R-DLCR /usr
> No usb storage is available!!
```

Telnet Command: usb temp

This command is to configure USB temperature.

Syntax Description

usb temp set <-c/-f/-a/-b/-m/-u/-l/-r>

usb temp show

usb temp all_data

Syntax Description

Parameter	Description
<i>set -c</i>	Set the temperature unit (Celsius).
<i>set -f</i>	Set the temperature unit (Fahrenheit).
<i>set -a</i>	Set the temperature sensor by using a probe or the built-in sensor automatically. The probe will be detected and used first, and fall back to the built-in sensor if the probe is not detected.
<i>set -b</i>	Set to use the built-in sensor.
<i>set -m</i>	Enable or disable the Alarm Setting. 1: Enable 0: Disable
<i>set -u <value></i>	Set the upper temperature limit. <value>: Enter a value, e.g., 30.35.
<i>set -l <value></i>	Set the lower temperature limit. <value>: Enter a value, e.g., 10.35.
<i>set -r</i>	Shows the setting of temperature unit and sensor type.
<i>show</i>	Displays current temperature.

<i>all_data</i>	Displays all temperature data.
-----------------	--------------------------------

Example

```
> usb temp set -r
Show setting:temp set -r

Alarm Settings: 0 (0:Disable, 1: Enable.)
upper temperature limit: 30.0 C
lower temperature limit: 18.0 C
unit: 0 (0:Celsius, 1: Fahrenheit.)
sensor: 0 (0:Auto select, 1: built-in.)
```

Telnet Command: **vigbrg set**

This command is to configure specified WAN as bridge mode.

Syntax Description

```
vigbrg set -v <IP version> -w <WAN_idx> -l <LAN_idx> -e <0/1> -f <0/1>
```

Syntax Description

Parameter	Description
<i>-v <IP version></i>	Indicate the IP version for the IP address. 4 - IPv4. 6 - IPv6.
<i>-w <WAN_idx></i>	WAN_idx - Indicate the WAN interface. 1 - WAN1 2 - WAN2 3 - WAN3 4 - WAN4 5 - WAN5
<i>-l <LAN_idx></i>	LAN_idx - Indicate the LAN interface. 1 - LAN1 2 - LAN2 3 - LAN3 4 - LAN4 5 - LAN5 6 - LAN6 15 - LAN15
<i>e <0/1></i>	Enable (1) or disable (0) the Vigor Bridge for WAN or/and LAN.
<i>f <0/1></i>	Enable (1) or disable (0) the firewall functions.

Example

```
> vigbrg set -v 4 -w 3 -l 1 -e 1
[WAN3] IPv4 bridge is enable. Set subnet[LAN1]
```

Telnet Command: **vigbrg closeall**

This command can disable vigor bridge function.

Example

```
> vigbrg closeall
Close all bridge and bridge firewall

[WAN3] IPv4 firewall is disable.
```

Telnet Command: vigbrg status

This command can show whether the Vigor Bridge Function is enabled or disabled.

Example

```
> vigbrg status
Show gConfig setting of bridge mode
```

Telnet Command: vigbrg cfgip

This command allows users to transfer a bridge modem into ADSL router by accessing into and adjusting specified IP address. Users can access into Web UI of the router to manage the router through the IP address configured here.

Syntax

vigbrg cfgip <IP Address>

Syntax Description

Parameter	Description
<IP Address>	It means to type an IP address for users to manage the router.

Example

```
> vigbrg cfgip 192.168.1.15
> vigbrg cfgip ?
% Vigor Bridge Config IP,
% Now: 192.168.1.15
```

Telnet Command: vigbrg wanstatus

This command can display the existed WAN connection status for the modem (change from ADSL router into bridge modem), including index number, MAC address, Stamp Time, PVC, VLAN port for Vigor Bridge Function..

Example

```
> vigbrg wanstatus
Vigor Bridge: Stop
WAN mac table:
Index   MAC Address           Stamp Time           PVC   VLan Port
```

Telnet Command: vigbrg wlanstatus

This command can display the existed WLAN connection status for the modem (change from router into bridge modem), including index number, MAC address, Stamp Time, PVC, VLAN port for Vigor Bridge Function.

Example

```
> vigbrg wlanstatus
Vigor Bridge: Stop
WAN mac table:
Index   MAC Address           Stamp Time   PVC   VLan Port
```

Telnet Command: fullbrg

The command is used to enable Full Bridge Mode so that the router will work as a bridge modem which is able to forward incoming packets with VLAN tags.

Syntax

fullbrg status

fullbrg set -i <WAN index> -n <Subnet index> -b <Bridge mode>

Syntax Description

Parameter	Description
-i <WAN index>	At present, only WAN1 is available. <WAN index>: 1.
-n <Subnet index>	Subnet index: Ranges from 1 to 8. 1: Subnet 1, 2: Subnet 2, ...etc.
-b <Bridge mode>	It means to enable / disable Bridge mode. 0: OFF 1: ON

Example

```
> fullbrg status
Show gConfig setting of full bridge
WAN 1 full bridge to LAN 1, mode=OFF.
> fullbrg set -i 1 -n 2 -b 1
Configure OK! Please reboot device to make it effective.
>
```

Telnet Command: voip debug

This command can display debug message on the screen.

Syntax

voip debug [*flush*]

voip debug [*showmsg*]

Syntax Description

Parameter	Description
<i>flush</i>	It means to clear current log.
<i>showmsg</i>	It means to show current log.

Example

```
> voip debug showmsg
-->Send Message to 192.168.1.2:5060 <02:35:16>
INVITE sip:192.168.1.2 SIP/2.0

Telnet Command: voip dialplan

This command allows users to set phone book settings.

Syntax

voip dialplan block *n* [-<command><parameter>]

voip dialplan phonebook *n* [-<command><parameter>]

voip dialplan region [-<command><parameter>]

voip dialplan local [*1/0*]

Syntax Description

Parameter	Description
voip dialplan block	
<i>n</i>	It means the index number of the VoIP settings. n=1 ~ 20
-<command><parameter>	The available commands with parameters are listed below.

<i>-m 0/1</i>	It means to enable or disable the block mode. 0 - Disable 1 - Enable
<i>-p <path></i>	Determines the block path. 1:in_url, 2:in_number 3:out_url, 4:out_number 5:(in & out)_url, 6:(in & out)_number)
<i>-n <number></i>	Determines the block number (maximum 29 characters).
<i>-d <domain></i>	Block the specified domain.
<i>-i <inf></i>	Block the specified interface(s) or All interfaces.
<i>-s <Schedule></i>	Specify schedule profiles by indicating the index number of the schedule profile. Four schedule profiles can be used at one time.
<i>-w</i>	Delete the selected entry. N=null (clear all)
<i>-v</i>	List current settings.
voip dialplan phonebook	
<i>n</i>	It means the index number of the VoIP settings. n=1 ~ 60
<i>-<command><parameter></i>	The available commands with parameters are listed below.
<i>-d <number></i>	Specify the speed dial number.
<i>-c <url></i>	Contact SIP URL l(max. 59 characters)
<i>-n <name></i>	Contact name (max. 23 characters)
<i>-a <enable></i>	Enable/disable the specify entry.
<i>-m <mode></i>	Specify backup number mode. 0 - none 2 - PSTN
<i>-b <number></i>	Specify the backup number.
<i>-o <acc num></i>	Specify the dial out account. 0 - default 1 - acc1, 2 - acc2... ~ 12:=acc12
<i>-z <enable></i>	Enable/disable ZRTP/SRTP VoIP security. 1 - enable 0 - disable
<i>-l</i>	Delete the specify entry.
<i>-V</i>	List current VoIP settings.
voip dialplan region	
<i>-e</i>	Dnable or disable the regional function. 1 - enable 0 - disable
<i>-m <number></i>	Return the last miss call.
<i>-I <number></i>	Return the last incoming call.
<i>-o <number></i>	Return the last outgoing call.
<i>-F <number></i>	Hotkey to enable call forwarding (all) function.

<i>-f</i> <number>	Hotkey to enable call forwarding (busy) function.
<i>-C</i> <number>	Hotkey to enable call forwarding (no answer) function.
<i>-c</i> <number>	Hotkey to disable call forwarding function.
<i>-W</i> <number>	Hotkey to enable call waiting function.
<i>-w</i> <number>	Hotkey to disable call waiting function.
<i>-H</i> <number>	Hotkey to enable hide caller ID function.
<i>-h</i> <number>	Hotkey to disable hide caller ID function.
<i>-D</i> <number>	Hotkey to enable DND function.
<i>-d</i> <number>	Hotkey to disable DND function.
<i>-A</i> <number>	Hotkey to enable block anonymous calls function.
<i>-a</i> <number>	Hotkey to disable block anonymous calls function.
<i>-U</i> <number>	Hotkey to enable block unknow domain calls function.
<i>-u</i> <number>	Hotkey to disable block unknow domain calls function.
<i>-P</i> <number>	Hotkey to disable block IP calls function.
<i>-p</i> <number>	Hotkey to disable block IP calls function.
<i>-I</i> <number>	Hotkey to block last incoming call.
<i>-v</i>	List current status for Regional settings.
voip dialplan local	
<i>enable/disable</i>	Enable or disable the local calls. 1 - enable 0 - disable

Example

```

> voip dialplan phonebook 1 -d 1125
> voip dialplan region -l 8
> voip dialplan region -v
Your Setting for Regional
Regional Function is: Enable
Return the Last Miss Call: 20
Return the Last Incoming Call: *12
Return the Last Outgoing Call: 1
Hotkey to enable call forwarding (all) function: 0
Hotkey to enable call forwarding (busy) function: *90
Hotkey to enable call forwarding (no answer) function: *92
Hotkey to disable call forwarding function: 12
Hotkey to Enable Call Waiting Function: *56
Hotkey to Disable Call Waiting Function: *57
Hotkey to Enable Hide Caller ID Function: *67
Hotkey to Disable Hide Caller ID Function: *68
Hotkey to Enable DND Function: *78
Hotkey to Disable DND Function: *79
Hotkey to Enable Block Anonymous Calls Function: *77
Hotkey to Disable Block Anonymous Calls Function: *87
Hotkey to Enable Block Unknow Domain Calls Function: *40
Hotkey to Disable Block Unknow Domain Calls Function: *04
Hotkey to Enable Block IP Calls Function: *50
Hotkey to Disable Block IP Calls Function: *05

```

Telnet Command: voip dsp

Syntax

```

voip dsp countrytone [channel] [value]
voip dsp dialtonepwr [channel] [AbsoluteValue]
voip dsp EchoCanceller [type] [w_size] [nlp]
voip dsp cidtype [channel] [value]
voip dsp micgain [channel] [value/(1-10)]
voip dsp spkgain [channel] [value/(1-10)]
voip dsp jitterBuffer [port] [mode] [value]
voip dsp dtmfDetset [nLevel] [nTwist]
voip dsp dtmfTonepwr [Level]
voip dsp cwtonepwr [ch] [value]
voip dsp pstnringfxs [1/2] [on/off]
voip dsp relaydbounce [on/off]
voip dsp setRingPat [ring_pattern_index] [patten_num]
voip dsp setDtmfCidlevel -l [value]
voip dsp setDtmfCidlevel -h [value]
voip dsp setDtmfCidlevel -r 0
voip dsp cidplusdigit [1/0] [channel] [value]

```

Syntax Description

Parameter	Description
voip dsp countrytone	
<i>[channel] [value]</i>	This command allows users to set the region for the tone settings. Different regions usually need different tone settings. Channel - 1 or 2. Value - displayed as follows: [2] UK, [3] USA, [4] Denmark, [5] Italy, [6] Germany, [7] Netherlands, [8] Portugal, [9] Sweden, [10] Australia, [11] Slovenia, [12] Czech, [13] Slovakia, [14] Hungary, [15] Switzerland, [16] France, [17] Malta
voip dsp dialtonepwr	
<i>channel</i>	This setting is used to adjust the loudness of the dial tone. The smaller the number is, the louder the dial tone is. It is recommended for you to use the default setting. Channel - Available channel number: 1 - 2
<i>AbsoluteValue</i>	AbsoluteValue - In -1 dB increments, with 1 corresponding to 6 dBm. Range - 1 to 30
voip dsp EchoCanceller	
<i>type</i>	This command is used to set the type of echo reduction. 0 - Disable the LEC processing.

	<p>1 - Cancel using the fixed window. 2 - Cancel using the fixed and moving window. 3 - Cancel using fixed window + Echo Suppressor.</p>
<i>w_size</i>	The Line Echo Canceller (LEC) window size is 4, 6, 8 or 16 (ms).
<i>nlp</i>	<p>Nlp - Non-linear processing (NLP) for more smooth transitions. 1 - disable 0 - enable</p>
<i>voip dsp cidtype</i>	
<i>channel</i>	<p>Set the caller ID type for FXS 1 (Channel 1) or FXS 2 (Channel 2). 1 - FXS 1 2 - FXS 2</p>
<i>value</i>	<p>Each number (1 to 6) represents different type. 1 - FSK_ETSI 2 - FSK_ETSI(UK) 3 - FSK_BELLCORE(US/AU) 4 - DTMF 5 - DTMF(Dk) 6 - DTMF(SE,NL,FIN) For example : Vigor> voip dsp cidtype 2 6 channel=2, current cidType: 6 That means the caller ID type for FXS2 (Channel2) is DTMF (SE, NL, FIN).</p>
<i>voip dsp micgain</i>	
<i>channel</i>	<p>Adjust the volume of microphone by entering number from 1- 10 for FXS 1 or FXS 2. 1 - FXS 1 2 - FXS 2</p>
<i>value/(1-10)</i>	The larger the number is, the louder the volume will be.
<i>voip dsp spkgain</i>	
<i>channel</i>	<p>Adjust the volume of speaker by entering number from 1- 10 for FXS 1 or FXS 2. 1 - FXS 1 2 - FXS 2</p>
<i>value/(1-10)</i>	The larger the number is, the louder the volume will be.
<i>voip dsp jb</i>	
<i>port</i>	<p>Set the size of jitter buffer. Available settings are 0 (FXS1) and 1 (FXS2).</p>
<i>mode</i>	Available settings are Fixed and Adaptive (default setting).
<i>value</i>	<p>Available settings are 1 ~ 180 (unit: msec). e.g., Vigor> voip dsp jb 1 FIXED 100</p>
<i>voip dsp timer</i>	
<i>[Timer]</i>	<p>Set the waiting time for dialing out. It means to set the timer settings. The unit is mini-second. The range is from 1 to 255. Value "1" is corresponding to 500ms. That is to say, Value "6" is corresponding 3000ms (i.e., 3 seconds) Timer: 1 ~ 20. Vigor> voip dsp timer 20</p>

	Set the timer:20
Voip dsp debugMsg	
?	<p>Availbe settings include:</p> <p>clrev - clear phone hook status.</p> <p>getev - get phone hook status.</p> <p>clrfskcid - clear fsk data for caller-ID from PSTN line.</p> <p>getfskcid - get fsk data for caller-ID from PSTN line.</p> <p>clrdtmfcid - clear dtmf data for caller-ID from PSTN line.</p> <p>getdtmfcid - get dtmf data for caller-ID from PSTN line.</p> <p>voicebuf - get message for available voice buffer pool.</p> <p>clrint - clear status for interrupt.</p> <p>getint - get status for interrupt.</p> <p>Vigor> voip dsp debugMsg getint</p> <p>the interrupt status for ad0 = 21</p> <p>the interrupt status for ad1 = 0</p> <p>the interrupt status for vc = 0</p>
voip dsp dtmfDetset	
<i>nLevel</i>	Set minimal signal level in dB, for DTMF detection. Range - (-96 ~ -1)
<i>nTwist</i>	Maximum allowed signal twist in dB, for DTMF detection. Range - (0 ~ 12)
voip dsp dtmftonepwr	
<i>Level</i>	Set power level for DTMF frequency. Level - 0 ~ 100. Power level for dtmf frequency in 0.3 dB steps. 0 map to 0dB 1 map to -0.3dB 100 map to -30dB
voip dsp cwtonepwr	
<i>ch</i>	Set the call waiting tone power level. 1 - FXS 1 2 - FXS 2.
<i>value</i>	1 ~ 30, in -1 dB increments, with 1 corresponding to 8 dBm.
voip dsp pstnringfxs	
<i>1/2</i>	Enable or disable PSTN ring on FXS 1/FXS 2. 1 meansFXS1; 2 means FXS2.
<i>on/off</i>	On means enable; off means disable.
voip dsp relaydbounce	
<i>on/off</i>	on: Enable relay filter noise. But it maybe ignore the caller-id!!! off: Disable relay filter noise. But the noise will cause the relay to switch to PSTN!!!
voip dsp setRingPat	
<i>ring_pattern_index</i>	This command can change the ring pattern at Index(2)-Index(6). ring_pattern_index - Index (1) was locked for your country.
<i>patten_num</i>	<p>It's the ring pattern number (1~12) for a country.</p> <p>-----</p> <p><i>patten_num=1 Australia Ring Pattern:</i> <i>cadenceOneOn=400, cadenceOneOff=200</i> <i>cadenceTwoOn=400, cadenceTwoOff=2000</i></p> <p><i>patten_num=2 Denmark Ring Pattern:</i></p>

	<i>cadenceOneOn=1000, cadenceOneOff=4000</i>
<i>voip dsp setFaxECmode -s</i>	
<i>ch</i>	Set the FAX error correction mode. ch : range (0 ~ 1)
<i>mode</i>	mode : EC(error correction) ch(x) mode(0) : REDUNDANCY EC(error correction) ch(x) mode(1) : FEC
<i>voip dsp setDtmfCidlevel -l / voip dsp setDtmfCidlevel -h [value]</i> <i>voip dsp setDtmfCidlevel -r 0</i>	
<i>value</i>	"setDtmfCidLevel" is used to configure the signal strength for transferring to FXS DTMF caller ID. value - 0 ~ 64 voip dsp setDtmfCidLevel -l [value] voip dsp setDtmfCidLevel -h [value] voip dsp setDtmfCidLevel -r 0/1 r - reset low/high DTNF level to default setting. 0 means Disable; 1 means Enable. Note: This function is supported only by special mode.
<i>voip dsp setfxoCY</i>	
<i>value</i>	It is used to apply FXO country settings. 0: "use system country" 1: "Taiwan" 2: "Germany" 3: "Sweden" 4: "France" 5: "Switzerland" 6: "Holland" 7: "Finland" 8: "Denmark" 9: "UK" 10: "Australia" 12: "Italy" 14: "Red_China" 15: "Singapore" 17: "Spain" 18: "Portugal" 20: "Poland" 21: "Czech" 22: "Hungary" 23: "Slovenia" 25: "Slovakia" 37: "Brasil" 61: "US"
<i>voip dsp setfxoringl</i>	
<i>value</i>	It is used to configure detection ring voltage threshold to apply to FXO. Available setting include: 0 : use driver default value 1 : Minimum voltage threshold: 25V 2 : Minimum voltage threshold: 35V 3 : Minimum voltage threshold: 45V Note: This function is supported only by special mode.
<i>voip dsp setfxoCid</i>	

<i>value</i>	Set FXO detect caller ID type. It is available only for the model with FXO port.
voip dsp cidplusdigit	
<i>[1/0] [channel] [value]</i>	Set the substitution (0-9) for '+' digit in caller ID. 1 - enable the substitution. 0 - disable the substitution. channel - 0 (FXS 1) -1 (FXS 2) value - 0 - 9
voip dsp setRingThres	
<i>port</i>	Set the threshold for ring signal. Port setting is "0" only.
<i>value</i>	Available settings 0-250. Unit is ms. The time is an approximate value.
voip dsp setCidDetGain	
<i>tx/rx gain</i>	Set the gain value of caller ID detected. Tx gain - Available settings -24 ~ 12. Default is 0. Rx gain - Available settings -24 ~ 12. Default is -6.

Example

```

> voip dsp countrytone ?
VoIP has been disable. Please enable VoIP first.
> voip sip misc -D 0
System reboot now!
> voip dsp countrytone ?
> Vigor> voip dsp countrytone?
usage:
  voip dsp countrytone [channel][value]
  [channel]: 1-2
  [value]: ( [2] UK, [3] USA, [4] Denmark, [5] Italy, [6] Germany, [7] Netherland
s, [8] Portugal, [9] Sweden, [10] Australia, [11] Slovenia, [12] Czech, [13]
Slovakia, [14] Hungary, [15] Switzerland , [16] France , [17] Malta)
===== Channel=1 =====
  current country tone: user defined

----- ( Dial tone ) -----
  Feq1=425, Feq2=0, OneOn=0, Off=0, TwoOn=0, TwoOff=0
----- ( Ringing tone ) -----
  Feq1=425, Feq2=0, OneOn=1500, OneOff=3000, TwoOn=0, TwoOff=0
----- ( Busy tone ) -----
  Feq1=425, Feq2=0, OneOn=200, OneOff=200, TwoOn=0, TwoOff=0

===== Channel=2 =====
  current country tone: user defined
> voip dsp dialtonepwr 1 20
Current power level of dialtone:20 (-13 db), channel=1
> voip dsp setCidDetGain tx 1
  Current CID Detect Tx Gain [1], Rx Gain [-6]
> voip dsp setCidDetGain rx 3
  Current CID Detect Tx Gain [1], Rx Gain [3]

```

Telnet Command: voip rtp

Syntax

voip rtp codec [*sip acc index*][*type/size/vad/one*][*value*]

voip rtp dtmf [*index*] [*mode/payloadtype*][*value*]

voip rtp port [*start/end*] [*value*]

voip rtp symmetric [*value*]

voip rtp tos ?

Syntax Description

Parameter	Description
<i>voip rtp codec</i>	
<i>[sip acc index][type/size/vad/one][value]</i>	Set the voice coding. sip acc index -SIP account index number. Available number, 1 ~ 12. type - Available settings include 0. G.711MU 1. G.711A 2. G.729A/B 3. G.723 4. G.726_32 size - Five options, 0 means 10ms 1 means 20ms 2 means 30ms 3 means 40ms 5 means 60ms Vad - 0 means to Disable the function of Voice Active Detector (vad); 1 means to Enable the function of Voice Active Detector (vad). One - 0 means to Disable the function of single codec; 1 means to Enable the function of single codec.
<i>voip rtp dtmf</i>	
<i>[index] [mode / payloadtype][value]</i>	Set the DTMF mode and Payload type for DTMF. Index - SIP account index number. Available number, 1 ~ 12. Mode - Four options to be selected. 0. Inband 1. Outband 2. SIP INFO (cisco) 3. SIP INFO (nortel) Payloadtype - Available settings 96-127. Value - Type 0-3 or 96-127 based on the mode specified. For example, > voip rtp dtmf 1 mode 1
<i>voip rtp port</i>	
<i>start/end</i>	Specifies the start/end port for RTP stream.
<i>value</i>	The default value is 10050/15000.
<i>voip rtp symmetric</i>	
<i>value</i>	Make the data transmission going through on both ends of local router and remote router not misleading due to IP lost.

	1 - Enable 0 - Disable
<i>voip rtp tos</i>	
<i>value</i>	Set the type of service (TOS) setting for RTP packets. For example, > voip rtp tos 0x899 Set TOS: 0x899

Example

```
> voip rtp codec 1 type 3
> voip rtp dtmf 2 mode 3
> voip rtp port start 10070 end 14400
Set start port: 10070
> voip rtp port end 14400
Set end port: 14400
> voip rtp symmetric 1
Set symmetric rtp to Enable
```

Telnet Command: voip sip

This command allows users to set SIP account.

Syntax

voip sip acc n [-<command> <parameter> | ...]

voip sip calllog

voip sip ep n [-<command> <parameter> | ...]

voip sip misc[-<command> <parameter> | ...]

voip sip nat [-<command> <parameter> | ...]

Syntax Description

Parameter	Description
<i>voip sip acc</i>	- Allows users to set SIP account.
<i>n</i>	n = 1 to 12 It means the index number of the VoIP settings.
<i>-P [profile]</i>	It means the name of the account profile (maximum 11 characters).
<i>-r [reg mode]</i>	Set registration mode for SIP account. 0 - none 1 - auto 2 - wan1 only 3 - wan2 only 4 - lan/vpn 5 - PVC 6 - wan3 only 7 - wan4 only 8 - wan1 first 9 - wan2 first 10 - wan3 first 11 - wan4 first
<i>-o [port]</i>	Set the port number for sending/receiving SIP message for building

	a session. The default value is 5060.
<i>-d [domain]</i>	Set the domain name or IP address of the SIP Registrar server. The maximum is 63 characters.
<i>-y [proxy]</i>	Set domain name or IP address of SIP proxy server. The maximum is 63 characters.
<i>-b [enable]</i>	Enable / disable outbound proxy by SIP account. 0 - disable 1 - enable
<i>-s [enable]</i>	Enable / disable to locate SIP server (rfc 3263). 0 - disable 1 - enable
<i>-N [name]</i>	Set SIP account display name. Name - max. 23 characters.
<i>-n [number]</i>	Set SIP account number. Number - max. 63 characters.
<i>-a [id]</i>	Set SIP authentication ID. Id - max. 63 characters.
<i>-A [enable]</i>	Enable /disable to use SIP authentication ID. 0 - disable 1 - enable
<i>-p [passwd]</i>	Set SIP account password (max. 63 characters).
<i>-e [sec]</i>	Set expiry time (default 3600) for SIP account.
<i>-w [enable]</i>	Enable to make phone call without registering.
<i>-m [mode]</i>	Set NAT traversal mode. 0 - disable 1 - stun 2 - manual 3 - nortel
<i>-F [mode]</i>	Set call forwarding mode. 0 - disable 1 - always 2 - busy 3 - no answer 4 - busy or no answer
<i>-u [url]</i>	Set SIP URL for call forwarding (max. 63 characters).
<i>-t [sec]</i>	Set call forwarding timer. For example, voip sip acc 1 -t 30
<i>-g [port]</i>	Set the ring port for incoming call. For example, Port - r1 means FXS1; r2 means FXS2.
<i>-z [pattern]</i>	Set account ring pattern (1 ~ 6).
<i>-i [enable]</i>	Remove all bindings while they are un-registered. 0 means Disable; and 1 means Enable.
<i>-B <enable></i>	Enable / disable the function of Broadsoft Call Control. 0 - disable 1 - enable
<i>-S [idx]</i>	Enable and use alias IP to register. idx - 1 to 31. If 0 is used, such function will be disabled.
<i>-k [num1 num2...]</i>	Set backup wan list (first wan, second wan...).

	range: 1 to 4.
-v	View current status for account settings.
<i>Voip sip callog</i>	Display current status for SIP call log.
<i>voip sip ep</i>	
<i>n</i>	The index number of the VoIP settings. n - 1, 2.
-o [<i>acc</i>]	Available dial out account (1 ~ 12).
-L [<i>url</i>]	Set SIP URL (max. 63 characters) for hot line.
-I [<i>enable</i>]	Enable / disable the function of hot line. 0 - disable 1 - enable
-W [<i>enable</i>]	Enable / disable the function of warm line. 0 - disable 1 - enable
-w [<i>enable</i>]	Enable / disable the function of call waiting enable. 0 - disable 1 - enable
-E [<i>enable</i>]	Enable / disable the function of call waiting enable but only remind one time. 0 - disable 1 - enable
-x < <i>enable</i> >	Enable / disable the function of call transfer. 0 - disable 1 - enable
-d [<i>enable</i>]	Enable / disable the function of DND (Do Not Disturb) 0 - disable 1 - enable
-s [<i>id</i>]	Indicate DND schedule. Id - s1, s2, s3, s4 (max. 4 schedule)
-h [<i>enable</i>]	Enable / disable the function of calling line identification restriction (CLIR). 0 - disable 1 - enable
-u [<i>mode</i>]	Set CLIR mode. 0 - means "draft-ietf-sip-privacy" 1 - means "rfc 3323/3325"
-z [<i>enable</i>]	Enable / disable playing dial tone when registered on sip server. 0 - disable 1 - enable
-n [<i>enable</i>]	Enable / disable session timer. 0 - disable 1 - enable
-m [<i>sec</i>]	Set the value for session timer (unit: sec).
-R [<i>min,max</i>]	Set the flash hook time range 100-2000 (unit: ms).
-8 [<i>enable</i>]	Enable or disable T.38 fax relay feature. 0 - disable 1 - enable

-v	View current settings.
voip sip misc - Allows users to set miscellaneous settings for the device.	
-c [enable]	Enable compact header to shorten the packet (0: disable, 1: enable).
-s [enable]	Change "#" into digit number. 0 - disable 1 - enable
-e [enable]	Enable Europe style flash hook operation mode. 0 - disable 1 - enable
-h [enable]	Enable/disable call hold mode based on protocol RFC2543 (0: disable, 1:enable).
-i [enable]	Enable CODEC change without Re-INVITE. 0 - disable 1 - enable
-p [enable]	Enable PRACK message. 0 - Not support PRACK. 1 - Support PRACK.
-P [enable]	Enable IP Call. 0 - Disable IP call. 1 - Enable IP call.
-H [enable]	SIP INFO packet will be sent out when encountering hook flash event. 0 - disable 1 - enable
-t [val]	Set the mode of User-Agent (e.g., phone, software, and device) for SIP packet. 0 - Hide SIP header "User-Agent". 1 - Show SIP header "User-Agent". 2 - Use default "User-Agent" value. 3 - Use user-defined "User-Agent" value.
-u UAValue	For every SIP user agent identifies itself with a string, this command allows you to set the value (e.g, IP address, phone number, e-mail address) of User-Agent. The length of the string must be less than 64 characters.
-D [disable]	Disable VoIP Service. 1 - disable VoIP service. 0 - enable VoIP service. System will automatic reboot to activate voip service
-v	View current status for miscellaneous settings.
voip sip nat - Allows users to set NAT Traversal Setting.	
-s [server]	Set the IP address for STUN server.
-t [sec]	Set ping interval for SIP account. Sec - 6 - 600
-i [ip]	Indicate external IP address.
-v	View current settings for SIP NAT.

Example

```
> voip sip misc -t 1
```

```

includes User-Agent header

> voip sip misc -u 91704688carrie
user-defined User-Agent:91704688carrie
> voip sip acc 1 -P carrie_1 -r 1 -d 172.16.3.133
> voip sip acc 1 -t 30
> voip sip misc -h 1
> voip sip acc 1 -v
index          : 1
profile        : carrie_1

```

Telnet Command: voip secure

This command allows users to enable or disable secure phone feature, and SAS voice prompt.

Syntax

voip secure general [-<command> <parameter> | ...]

Syntax Description

Parameter	Description
<i>voip secure general -e</i>	Enable / disable secure phone feature. 0 - disable 1 - enable
<i>voip secure general -p</i>	Enable /disable SAS voice prompt. 0 - disable 1 - enable
<i>voip secure general -v</i>	view only secure phone general settings

Example

```

> voip secure general -v
secure phone feature is disabled
SAS voice prompt is enabled

```

```
> voip secure general -p 0
SAS voice prompt is disabled
```

Telnet Command: vlan

This command allows you to set VLAN group. You can set four VLAN groups. Please run *vlan restart* command after you change any settings.

Syntax

`vlan group id <set/set_ex><p1/p2/p3/p4/s1/s2/s3/s4>`

Syntax Description

Parameter	Description
<i>id</i>	It means the group 0 to 7 for VLAN.
<i>set</i>	It indicates each port can join more than one VLAN group.
<i>set_ex</i>	It indicates each port can join one VLAN group at one time.
<i>p1/p2/p3/p4</i>	It indicates LAN port 1 to LAN port 4. To group LAN1, LAN2, LAN3 and/or LAN4 under one VLAN group, please type the port number(s) you want.
<i>s1/s2/s3/s4</i>	It is only available for WALN models.

Example

```
> vlan group 3 set p1 s3 s4 5gs3 5gs4
VLAN  p1  p2  p3  p4  s1  s2  s3  s4  5gs1  5gs2  5gs3  5gs4
-----
   3   V                               V   V                               V   V
>
```

Telnet Command: vlan off

This command allows you to disable VLAN function.

Syntax

`vlan off`

Example

```
> vlan off
VLAN is Disable!
Force subnet LAN2/3/4/5/6/7/8 to be disabled!!
>
```

Telnet Command: vlan on

This command allows you to enable VLAN function.

Syntax

`vlan on`

Example

```
> vlan on
VLAN is Enable!
>
```

Telnet Command: vlan pri

This command is used to define the priority for each VLAN profile setting.

Syntax

vlan pri *n pri_no*

Syntax Description

Parameter	Description
<i>n</i>	It means VLAN ID number. n=VLAN ID number (from 0 to 7).
<i>pri_no</i>	It means the priority of VLAN profile. pri_no=0 ~7 (from none to highest priority).

Example

```
> vlan pri 1 2
VLAN1: Priority=2
>
```

Telnet Command: vlan restart

This command can make VLAN settings restarted with newest configuration.

Syntax

vlan restart

Example

```
> vlan restart ?
VLAN restarts!!!
>
```

Telnet Command: vlan status

This command display current status for VLAN.

Syntax

vlan status

Example

```
> vlan status
VLAN is Enable :
-----
```

VLAN	Enable	VID	Pri	p1	p2	p3	p4	s1	s2	s3	s4	5gs1	5gs2	5gs3	5gs4	subnet
0	OFF	0	0													1:LAN1
1	OFF	0	2													1:LAN1
2	OFF	0	0													1:LAN1
3	OFF	0	0	V				V	V			V	V			1:LAN1
4	OFF	0	0													1:LAN1
5	OFF	0	0													1:LAN1
6	OFF	0	0													1:LAN1
7	OFF	0	0													1:LAN1

Note: they are only untag for s1/s2/s3/s4/5gs1/5gs2/5gs3/5gs4, but they can join tag vlan with lan ports.
Permit untagged device in P1 to access router: ON.

```
>
```

Telnet Command: vlan subnet

This command is used to configure the LAN interface used by the VLAN group.

Syntax

```
vlan subnet group_id <1/2/3/4>
```

Syntax Description

Parameter	Description
<1/2/3/4>	It means interfaces, LAN1 ~ LAN4.

Example

```
> vlan subnet group_id 2
% Vlan Group-0 using LAN2      !

This setting will take effect after rebooting.
Please use "sys reboot" command to reboot the router.
```

Telnet Command: vlan submode

This command changes the VLAN encapsulation mechanisms in the LAN driver.

Syntax

```
vlan submode <on/off/status>
```

Syntax Description

Parameter	Description
<i>on</i>	It means to enable the promiscuous mode.
<i>off</i>	It means to enable the normal mode.
<i>status</i>	It means to display if submode is normal mode or promiscuous mode.

Example

```

> vlan submode status
% vlan subnet mode : normal mode
> vlan submode on
% vlan subnet mode modified to promiscuous mode.

```

Telnet Command: vlan tagged

This command is used to enable or disable the incoming of untagged packets.

Syntax

```

vlan tagged <n> <on/off>
vlan tagged <unlimited> <on/off>
vlan tagged <p1_untag> <on/off>

```

Syntax Description

Parameter	Description
<n>	It means VLAN number. The range is from 0 to 15.
<on/off>	It means to enable/disable the tagged VLAN.
<unlimited> <on/off>	unlimited on: It allows the incoming of untagged packets even all VLAN are tagged. unlimited off: It does not allows the incoming of untagged packets.
<p1_untag> <on/off>	P1_untag on: It allows the incoming of untagged packets form LAN port 1. P1_untag off: It does not allow the incoming of untagged packets from LAN port 1.

Example

```

> vlan tagged unlimited on
Unlimited mode is ON
>

```

Telnet Command: vlan vid

This command is used to configure VID number for each VLAN channel.

Syntax

```

vlan vid <n> <vid_no>

```

Syntax Description

Parameter	Description
<n>	It means VLAN channel. The range is from 0 to 7.
<vid_no>	It means the value of VLAN ID. Type the value as the VLAN ID number. The range is form 0 to 4095.

Example

```
> vlan vid 1 4095
  VLAN1, vid=4095
>
```

Telnet Command: vlan sysvid

This command is used to modify and show the scope (reserved 78) of the VLAN IDs used internally by the system.

Syntax

vlan sysvid <show / n>

Syntax Description

Parameter	Description
<i>show</i>	It means to show the scope of VLAN ID used internally.
<i>n</i>	It means the value to be set as VLAN ID. The range is from 0 to 4018.

Example

```
> vlan sysvid 100
  You have set system VLAN ID to range: 100 ~ 177,
  We recommend that you reboot the system now.
>
```

Telnet Command: vpn l2lset

This command allows users to set advanced parameters for LAN to LAN function.

Syntax

vpn l2lset <list index> peerid <peerid>

vpn l2lset <list index> localid <localid>

vpn l2lset <list index> main <auto/proposal index>

vpn l2lset <list index> aggressive <desg1/desg2/aesg1/aesg2/aesg5/aesg14>

vpn l2lset <list index> pfs <on/off>

vpn l2lset <list index> phase1 <lifetime>

vpn l2lset <list index> phase2 <lifetime>

vpn l2lset <list index> x509localid <0/1>

vpn l2lset <list index> compress <0/1/2/3>

Syntax Description

Parameter	Description
<list index>	It means the index number of L2L (LAN to LAN) profile.
<i>peerid</i> <peerid>	It means the peer identity for aggressive mode.
<i>localid</i> <localid>	It means the local identity for aggressive mode.
<i>main</i> <auto/proposal index>	It means to choose proposal for main mode.

	<auto>: Choose default proposals. <proposal index>: choose specified proposal.
<i>aggressive</i> <desg1/desg2/aesg1/aesg2/ aesg5/aesg14>	It means the chosen DH group for aggressive mode.
<i>pfs</i> <on/off>	It means "perfect forward secrete". <on/off>: Turn on or off the PFS function.
<i>phase1</i> <lifetime> / <i>phase2</i> <lifetime>	It means phase 1 or 2 of IKE. <lifetime>: Set the lifetime value (in second) for phase 1 and phase 2.
<i>x509localid</i> <0/1>	It means to enable (1) or disable (0) the X509 local ID.
<i>compress</i> <0/1/2/3>	It means to set the compress setting. <0/1/2/3>: Enter a number. 0: Disable 1: No 2: LZ4 3: LZ0

Example

```
> vpn l2lset 1 peerid 10226
>
```

Telnet Command: vpn l2IDrop

This command allows users to terminate current LAN to LAN VPN connection.

Syntax

vpn l2IDrop *l2lname* <name>

vpn l2IDrop *l2lidx* <idx>

vpn l2IDrop *h2lname* <name>

vpn l2IDrop *h2lidx* <idx>

vpn l2IDrop <ifno>

vpn l2IDrop

Syntax Description

Parameter	Description
<i>l2lname</i> <name>	It means to drop VPN connection by specifying the name of the LAN to LAN profile.
<i>l2lidx</i> <idx>	It means to drop VPN connection by specifying the index number of LAN to LAN profile.
<i>h2lname</i> <name>	It means to drop VPN connection by specifying the name of the remote dial-in user profile.
<i>h2lidx</i> <idx>	It means to drop VPN connection by specifying the index number of the remote dial-in user profile.
<ifno>	It means to drop VPN connection by using VPN ifno.
<i>l2IDrop</i>	It means to drop all VPN connections.

Example

```
> vpn l2lDrop l2lidx 2
% Drop 0 VPN with idx : 2
>
```

Telnet Command: vpn l2lDialout

This command allows users to terminate current LAN to LAN VPN connection (dial-out).

Syntax

vpn l2lDialout <idx>

vpn l2lDialout list

Syntax Description

Parameter	Description
<i>l2lDialout <idx></i>	It means to build VPN connection by specifying the index number of dial-out LAN to LAN profile. <idx>: Enter an index number (1 to 32).
<i>list</i>	It means to display LAN to LAN profiles (enabled).

Example

```
> vpn l2lDialout 1
Profile Index: 1 not enable!!!
> vpn l2lDialout list
List LAN to LAN profiles of the status as Enable
Index Profile Active Status
% Drop 0 VPN with idx : 2
>
```

Telnet Command: vpn dinset

This command allows users to configure setting for remote dial-in VPN profile.

Syntax

vpn dinset <list index>

vpn dinset <list index> <on/off>

vpn dinset <list index> username <USERNAME>

vpn dinset <list index> password <PASSWORD>

vpn dinset <list index> motp <on/off>

vpn dinset <list index> pin_secret <pin> <secret>

vpn dinset <list index> timeout <0-9999>

vpn dinset <list index> dintype <Type> <on/off>

vpn dinset <list index> assignip <on/off>

vpn dinset <list index> srnode <on/off>

vpn dinset <list index> remoteip <Remote_Client_IP_Address>

vpn dinset <list index> peer <Peer_ID>
 vpn dinset <list index> naming <pass/block>
 vpn dinset <list index> multicastvpn <pass/block>
 vpn dinset <list index> prekey <on/off>
 vpn dinset <list index> assignkey <Pre_Shared_Key>
 vpn dinset <list index> digsig <on/off>
 vpn dinset <list index> ipsec <Method> <on/off>
 vpn dinset <list index> localid <Local_ID>

Syntax Description

Parameter	Description
<list index>	It means the index number of the profile.
<list index> <on/off>	It means to enable or disable the profile. <list index> - Enter the index number of the VPN profile. <on/off> - on: Enable; off: Disable.
<list index> motp <on/off>	It means to enable or disable the authentication with mOTP function. <list index> - Enter the index number of the VPN profile. <on/off> - on: Enable; off: Disable.
<list index> pin_secret<pin> <secret>	It means to set PIN code with secret. <list index> - Enter the index number of the VPN profile. <pin> - Type the code for authentication (e.g, 1234). <secret> - Use the 32 digit-secret number generated by mOTP in the mobile phone (e.g., e759bb6f0e94c7ab4fe6)
<list index> timeout <0-9999>	It means to set idle timeout. The default is 300 (seconds). <list index> - Enter the index number of the VPN profile. <0-9999> - Enter a value.
<list index> dintype <Type> <on/off>	It means to enable/disable the allowed dial-in type. <list index> - Enter the index number of the VPN profile. <Type> - 0 to 3. In which, 0 means PPTP; 1 means IPsec Tunnel; 2 means L2TP with IPsec Policy; 3 means SSL Tunnel. <on/off> - on: Enable; off: Disable.
vpn dinset <list index> subnet <0-4>	It means to set the LAN subnet for the selected VPN profile. <list index> - Enter the index number of the VPN profile. <0-4> - Enter a number to specify the LAN subnet. In which, 0:LAN1 1:LAN2 2:LAN3 3:LAN4 4:DMZ
vpn dinset <list index> assignip <on/off>	It means to enable or disable the function of assigning the static IP address. <list index> - Enter the index number of the VPN profile. <on/off> - on: Enable; off: Disable.
vpn dinset <list index>	It means to enable or disable the function of specifying the remote

<i>srnode <on/off></i>	node. <list index> - Enter the index number of the VPN profile. <on/off> - on: Enable; off: Disable.
<i>vpn dinset <list index> remoteip <Remote_Client_IP_Address ></i>	It means to enable or disable the function of assigning remote client IP. <list index> - Enter the index number of the VPN profile. <Remote_Client_IP_Address> - Set the IP address of the remote client.
<i>vpn dinset <list index> peer <Peer_ID></i>	It means to assign the peer ID. <list index> - Enter the index number of the VPN profile. <Peer_ID> - Enter the string of the peer ID.
<i>vpn dinset <list index> naming <pass/block></i>	It means to set the Netbios Naming Packet for the VPN profile. <list index> - Enter the index number of the VPN profile. <pass/block> - Let the packet pass or block the packet.
<i>vpn dinset <list index> multicastvpn <pass/block></i>	It means to set the multicast via VPN for IGMP, IP-CAM, DHCP relay, and etc. <list index> - Enter the index number of the VPN profile. <pass/block> - Let the packet pass or block the packet.
<i>vpn dinset <list index> prekey <on/off></i>	It means to enable/disable the Pre-Shared Key setting for IKE Authentication Method. <list index> - Enter the index number of the VPN profile. <on/off> - on: Enable; off: Disable.
<i>vpn dinset <list index> assignkey <Pre_Shared_Key></i>	It means to set the Pre-Shared Key for IKE Authentication Method. <list index> - Enter the index number of the VPN profile. <Pre_Shared_Key> - Enter a string as PSK.
<i>vpn dinset <list index> digsig <on/off></i>	It means to enable/disable the digital signature (X.509) for IKE Authentication Method. <list index> - Enter the index number of the VPN profile. <on/off> - on: Enable; off: Disable.
<i>vpn dinset <list index> ipsec <Method> <on/off></i>	It means to enable / disable and set the protocol for IPsec security method. <list index> - Enter the index number of the VPN profile. <Method> - Enter a number (0 to 3) to specify the protocol. 0 means Medium(AH) High(ESP), 1 means DES 2 means 3DES 3 means AES <on/off> - on: Enable; off: Disable.
<i>vpn dinset <list index> localid <Local_ID></i>	It means to set local ID (optional) for IPsec Security Method. <list index> - Enter the index number of the VPN profile. <local_ID> - Enter the string of local ID.

Example

```

> vpn dinset 1

Dial-in profile index 1

Profile Name: ???
Status: Deactive

Mobile OTP: Disabled

```

```

Password:

Idle Timeout: 300 sec

> vpn dinset 1 on
% set profile active

> vpn dinset 1 motp on
% Enable Mobile OTP mode!>
> vpn dinset 1 pin_secret 1234 e759bb6f0e94c7ab4fe6
> vpn dinset 1

Dial-in profile index 1

Profile Name: ???
Status: Active

Mobile OTP: Enabled

PIN: 1234

Secret: e759bb6f0e94c7ab4fe6

Idle Timeout: 300 sec

```

Telnet Command: vpn subnet

This command allows users to specify a subnet selection for the specified remote dial-in VPN profile.

Syntax

```
vpn subnet <index> <1/2/3/4>
```

Syntax Description

Parameter	Description
<index>	It means the index number of the VPN profile.
<1/2/3/4>	1 - it means LAN1 2 - it means LAN2. 3 - it means LAN3 4 - it means LAN4.

Example

```

> vpn subnet 1 2
>

```

Telnet Command: vpn setup

This command allows users to setup VPN for different types.

Syntax

Command of PPTP Dial-Out

```
vpn setup <index> <name> pptp_out <ip> <usr> <pwd> <nip> <nmask>
```

Command of IPsec Dial-Out

```
vpn setup <index> <name> ipsec_out <ip> <key> <nip> <nmask>
```

Command of L2Tp Dial-Out

```
vpn setup <index> <name> l2tp_out <ip> <usr> <pwd> <nip> <nmask>
```

Command of Dial-In

```
vpn setup <index> <name> dialin <ip> <usr> <pwd> <key> <nip> <nmask>
```

Syntax Description

Parameter	Description
For PPTP Dial-Out	
<index>	It means the index number of the profile.
<name>	It means the name of the profile.
<ip>	It means the IP address to dial to.
<usr> <pwd>	It means the user and the password required for the PPTP connection.
<nip> <nmask>	It means the remote network IP and the mask. e.g., vpn setup 1 name1 pptp_out 1.2.3.4 vigor 1234 192.168.1.0 255.255.255.0
For IPsec Dial-Out	
<index>	It means the index number of the profile.
<name>	It means the name of the profile.
<ip>	It means the IP address to dial to.
<key>	It means the value of IPsec Pre-Shared Key.
<nip> <nmask>	It means the remote network IP and the mask. e.g., vpn setup 1 name1 ipsec_out 1.2.3.4 1234 192.168.1.0 255.255.255.0
For L2TP Dial-Out	
<index>	It means the index number of the profile.
<name>	It means the name of the profile.
<ip>	It means the IP address to dial to.
<usr> <pwd>	It means the user and the password required for the L2TP connection.
<nip> <nmask>	It means the remote network IP and the mask. e.g., vpn setup 1 name1 l2tp_out 1.2.3.4 vigor 1234 192.168.1.0 255.255.255.0
For Dial-In	

<i><index></i>	It means the index number of the profile.
<i><name></i>	It means the name of the profile.
<i><ip></i>	It means the IP address allowed to dial in.
<i><usr></i> <i><pwd></i>	It means the user and the password required for the PPTP/L2TP connection.
<i><key></i>	It means the value of IPsec Pre-Shared Key.
<i><nip></i> <i><nmask></i>	It means the remote network IP and the mask. e.g., vpn setup 1 name1 dialin 1.2.3.4 vigor 1234 abc 192.168.1.0 255.255.255.0

Example

```
> vpn setup 1 name1 dialin 1.2.3.4 vigor 1234 abc 192.168.1.0 255.255.255.0
% Profile Change Log ...

% Profile Index : 1
% Profile Name : name1
% Username : vigor
% Password : 1234
% Pre-share Key : abc
% Call Direction : Dial-In
% Type of Server : ISDN PPTP IPsec L2TP
% Dial from : 1.2.3.4
% Remote Network IP : 192.168.1.0
% Remote Network Mask : 255.255.255.0
>
```

Telnet Command: vpn option

This command allows users to configure settings for LAN to LAN profile.

Syntax

vpn option *<index>* *<cmd1>*=*<param1>* [*<cmd2>*=*<para2>* | ...]

Syntax Description

Parameter	Description
<i><index></i>	It means the index number of the profile. Available index numbers: 1 ~ 32
For Common Settings	
<i><index></i>	It means the index number of the profile.
<i>pname</i>	It means the name of the profile.
<i>ena</i>	It means to enable or disable the profile. on - Enable off - Disable
<i>thr</i>	It means the way that VPN connection passes through. Available settings are w1f, w1o, w2f, and w2o.

	w1f - WAN1 First. w1o - WAN1 Only. w2f - WAN2 First. w2o - WAN2 Only.
<i>nnpkt</i>	It means the NetBios Naming Packet. on - Enable the function to pass the packet. off - Disable the function to block the packet.
<i>dir</i>	It means the call direction. Available settings are b, o and i. b - Both o - Dial-Out i - Dial-In.
<i>idle=[value]</i>	It means Always on and Idle Time out. Available values include: -1 - it means always on for dial-out. 0 - it means always on for dial-in. Other numbers (e.g., idle=200, idle=300, idle=500) mean the router will be idle after the interval (seconds) configured here.
<i>palive</i>	It means to enable PING to keep alive. -1 - disable the function. 1,2,3,4 - Enable the function and PING IP 1.2.3.4 to keep alive.
For Dial-Out Settings	
<i>ctype</i>	It means "Type of Server I am calling". "ctype=t" means PPTP. "ctype=s" means IPsec. "ctype= l" means L2TP(IPsec Policy None). "ctype= l1" means L2TP(IPsec Policy Nice to Have). "ctype= l2" means L2TP(IPsec Policy Must).
<i>dialto</i>	It means Server IP/Host Name for VPN. (such as draytek.com or 123.45.67.89).
<i>ltype</i>	It means Link Type. "ltype=0" means "Disable". "ltype=1" means "64kbps". "ltype=2" means "128kbps". "ltype=3" means "BOD".
<i>oname</i>	It means Dial-Out Username. "oname=admin" means to set Username = admin.
<i>opwd</i>	It means Dial-Out Password "opwd=1234" means to set Password = 1234.
<i>pauth</i>	It means PPP Authentication. "pauth=pc" means to set PPP Authentication = PAP&CHAP. "pauth=p" means to set PPP Authentication = PAP Only
<i>ovj</i>	It means VJ Compression. "ovj=on/off" means to enable/disable VJ Compression.
<i>okey</i>	It means IKE Pre-Shared Key. "okey=abcd" means to set IKE Pre-Shared Key = abcd.
<i>ometh</i>	It means IPsec Security Method. "ometh=ah/" means AH. "ometh=espd/espda/" means ESP DES without/with Authentication. "ometh=esp3/esp3a/" means ESP 3DES without/with

	Authentication. "ometh=espa/espaa" means ESP AES without/with Authentication.
<i>sch</i>	It means Index(1-15) in Schedule Setup. sch=1,3,5,7 Set schedule 1->3->5->7
<i>rallb</i>	It means Require Remote to Callback. "rallb=on/off" means to enable/disable Set Require Remote to Callback.
<i>ikeid</i>	It means IKE Local ID. "ikeid=vigor" means Set Local ID = vigor.
For Dial-In Settings	
<i>itype</i>	It means Allowed Dial-In Type. Available settings include: "itype=t" means PPTP. "itype=s" means IPsec. "itype=L1" means L2TP (None). "itype=L1" means L2TP(Nice to Have). "itype=l2" means L2TP(Must).
<i>peer</i>	It means specify Peer VPN Server IP for Remote VPN Gateway. Type "203.12.23.48" means to allow VPN dial-in with IP address of 203.12.23.48. Type "off" means any remote IP is allowed to dial in.
<i>peerid</i>	It means the peer ID for Remote VPN Gateway. Type "draytek" means the word is used as local ID.
<i>iname</i>	It means Dial-in Username. "iname=admin" means to set username as "admin".
<i>ipwd</i>	It means Dial-in Password. "ipwd=1234" means to set password as "1234".
<i>ivj</i>	It means VJ Compression. "ivj=on/off" means to enable /disable VJ Compression.
<i>ikekey</i>	It means IKE Pre-Shared Key. "ikekey=abcd" means to set IKE Pre-Shared Key = abcd.
<i>imeth</i>	It means IPsec Security Method "imeth=h" means "Allow AH". "imeth=d" means "Allow DES". "imeth=3" means "Allow 3DES". "imeth=a" means "Allow AES".
For TCP/IP Settings	
<i>mywip</i>	It means My WAN IP. "mywip=1.2.3.4" means to set My WAN IP as "1.2.3.4".
<i>rgip</i>	It means Remote Gateway IP. "rgip=1.2.3.4" means to set Remote Gateway IP as "1.2.3.4".
<i>rnip</i>	It means Remote Network IP. "rnip=1.2.3.0" means to set Remote Network IP as "1.2.3.0".
<i>rnmask</i>	It means Remote Network Mask. "rnmask=255.255.255.0" means to set Remote Network Mask as "255.255.255.0".
<i>rip</i>	It means RIP Direction. "rip=d" means to set RIP Direction as "Disable". "rip=t" means to set RIP Direction as "TX".

	<p>"rip=r" means to set RIP Direction as "RX".</p> <p>"rip=b" means to set RIP Direction as "Both".</p>
<i>mode</i>	<p>It means the option of "From first subnet to remote network, you have to do".</p> <p>"mode=r" means to set Route mode.</p> <p>"mode=n" means to set NAT mode.</p>
<i>droute</i>	<p>It means to Change default route to this VPN tunnel (Only single WAN supports this).</p> <p>droute=on/off means to enable/disable the function.</p>

Example

```

> vpn option 1 idle=250
% Change Log..

% Idle Timeout = 250
>

```

Telnet Command: vpn mroute

This command allows users to list, add or delete static routes for a certain LAN to LAN VPN profile.

Syntax

vpn mroute *<index>* list

vpn mroute *<index>* add *<network ip>/<mask>*

vpn mroute *<index>* del *<network ip>/<mask>*

Syntax Description

Parameter	Description
<i>list</i>	It means to display all of the route settings.
<i>add</i>	It means to add a new route.
<i>del</i>	It means to delete specified route.
<i><index></i>	It means the index number of the profile. Available index numbers: 1 ~ 32
<i><network ip>/<mask></i>	Enter the IP address with the network mask address.

Example

```

> vpn mroute 1 add 192.168.5.0/24
% 192.168.5.0/24
% Add new route 192.168.5.0/24 to profile 1

```

Telnet Command: vpn list

This command allows users to view LAN to LAN VPN profiles.

Syntax

vpn list <index> all

vpn list <index> com

vpn list <index> out

vpn list <index> in

vpn list <index> net

Syntax Description

Parameter	Description
<i>all</i>	It means to list configuration of the specified profile.
<i>com</i>	It means to list common settings of the specified profile.
<i>out</i>	It means to list dial-out settings of the specified profile.
<i>in</i>	It means to list dial-in settings of the specified profile.
<i>net</i>	It means to list Network Settings of the specified profile.
<index>	It means the index number of the profile. Available index numbers: 1 ~ 32

Example

```
> vpn list 32 all
% Common Settings

% Profile Name           : ???
% Profile Status        : Disable
% Dialout WAN IP Alias Index : None
% Netbios Naming Packet : Pass
% Call Direction        : Both
% Idle Timeout          : 300
% PING to keep alive    : off
% OVPN Compress         : Disable
% OVPN tls_auth option  : off

% Dial-out Settings

% Type of Server        : PPTP
% Link Type:           : 64k bps
% Username              : ???
% Password              :
% PPP Authentication    : PAP/CHAP
% VJ Compression       : on
% Pre-Shared Key       :
% IPsec Security Method : AES with Authentication
% Schedule              : 0,0,0,0
% Remote Callback      : off
% Provide ISDN Number  : off
```

```

% IKE phase 1 mode          : Main mode
% IKE Local ID              :

% Dial-In Settings

% Allow Dial-in Type       : ISDN IPsec L2TP (IPsec Policy None) --- MORE --- ['q':
Quit, 'Enter': New Lines, 'Space Bar': Next Page] ---
> vpn list 1 com
% Common Settings

% Profile Name              : ???
% Profile Status            : Disable
% Netbios Naming Packet    : Pass
% Call Direction           : Both
% Idle Timeout              : 300
% PING to keep alive       : off
>

```

Telnet Command: vpn remote

This command allows users to enable or disable *PPTP/IPSec/L2TP* VPN service.

Syntax

vpn remote <PPTP/IPsec/L2TP/SSLVPN> <on/off>

Syntax Description

Parameter	Description
<PPTP/IPsec/L2TP/SSLVPN>	There are four types to be selected.
<on/off>	on - enable VPN remote setting. off - disable VPN remote setting.

Example

```

> vpn remote PPTP on
Set PPTP VPN Service : On

Please restart the router!!

```

Telnet Command: vpn NetBios

This command allows users to enable or disable NetBios for Remote Access User Accounts or LAN-to-LAN Profile.

Syntax

vpn NetBios set <H2I/L2I> <index> <Block/Pass>

Syntax Description

Parameter	Description
<H2I/L2I>	H2I means Remote Access User Accounts.

	L2I means LAN-to-LAN Profile. Specify which one will be applied by NetBios.
<index>	The index number of the profile.
<Block/Pass>	Pass - Have an inquiry for data transmission between the hosts located on both sides of VPN Tunnel while connecting. Block - When there is conflict occurred between the hosts on both sides of VPN Tunnel in connecting, set it block data transmission of Netbios Naming Packet inside the tunnel.

Example

```
> vpn NetBios set H2l 1 Pass
% Remote Dial In Profile Index [1] :
% NetBios Block/Pass: [PASS]
```

Telnet Command: vpn mss

This command allows users to configure the maximum segment size (MSS) for different TCP types.

Syntax

vpn mss show

vpn mss default

vpn mss set <connection type> <TCP maximum segment size range>

Syntax Description

Parameter	Description
<i>show</i>	It means to display current setting status.
<i>default</i>	TCP maximum segment size for all the VPN connection will be set as 1360 bytes.
<i>set</i>	Use it to specify the connection type and value of MSS.
<connection type>	1~4 represent various type. 1 - PPTP 2 - L2TP 3 - IPSec 4 - L2TP over IPSec 5 - SSL Tunnel
<TCP maximum segment size range>	Each type has different segment size range. PPTP - 1 ~ 1412 L2TP - 1 ~ 1408 IPSec - 1 ~ 1381 L2TP over IPSec - 1 ~ 1361 SSL Tunnel - 1 ~ 1360

Example

```
> vpn mss set 1 1400
% VPN TCP maximum segment size (MSS) :
  PPTP = 1400
  L2TP = 1360
```

```

IPsec = 1360
L2TP over IPsec = 1360
SSL Tunnel = 1260
> vpn mss show
% VPN TCP maximum segment size (MSS) :
PPTP = 1400
L2TP = 1360
IPsec = 1360
L2TP over IPsec = 1360
SSL Tunnel = 1260
>

```

Telnet Command: vpn ike

This command is used to display IKE memory status and leakage list.

Syntax

vpn ike -q

vpn ike -s

Example

```

> vpn ike -q
IKE Memory Status and Leakage List

# of free L-Buffer=95, minimum=94, leak=1
# of free M-Buffer=529, minimum=529 leak=3
# of free S-Buffer=1199, minimum=1198, leak=1
# of free Msgid-Buffer=1024, minimum=1024

```

Telnet Command: vpn Multicast

This command allows users to pass or block the multi-cast packet via VPN.

Syntax

vpn Multicast set <H2L/L2L> <index> <Block/Pass>

Syntax Description

Parameter	Description
<H2L/L2L>	H2L means Host to LAN (Remote Access User Accounts). L2L means LAN-to-LAN Profile.
<index>	The index number of the profile.
<Block/Pass>	Set Block/Pass the Multicast Packets. The default is Block.

Example

```

> vpn Multicast set L2L 1 Pass
% Lan to Lan Profile Index [1] :
% Status Block/Pass: [PASS]

```

Telnet Command: vpn pass2nd

This command allows users to determine if the packets coming from the second subnet passing through current used VPN tunnel.

Syntax

```
vpn pass2nd <on/off>
```

Syntax Description

Parameter	Description
<on/off>	on - the packets can pass through NAT. off - the packets cannot pass through NAT.

Example

```

> vpn pass2nd on
% 2nd subnet is allowed to pass VPN tunnel!

```

Telnet Command: vpn pass2nat

This command allows users to determine if the packets passing through by NAT or not when the VPN tunnel disconnects.

Syntax

```
vpn pass2nat <on/off>
```

Syntax Description

Parameter	Description
<on/off>	on - the packets can pass through NAT. off - the packets cannot pass through NAT.

Example

```

> vpn pass2nat on
% Packets would go through by NAT when VPN disconnect!!

```

Telnet Command: vpn passAPM

This command is used for configuring the APM broadcast allowed to pass the VPN tunnel.

Syntax

vpn passAPM <on/off>

Syntax Description

Parameter	Description
<on/off>	on - the packets can pass through NAT. off - the packets cannot pass through NAT.

Example

```
> vpn passAPM on
% APM broadcast is allowed to pass VPN tunnel!
>
```

Telnet Command: vpn sameSubnet

This command allows users to build VPN between clients via virtual subnet.

Syntax

vpn sameSubnet -i <value>

vpn sameSubnet -E <0/1>

vpn sameSubnet -e <value>

vpn sameSubnet -l <Virtual Subnet>

vpn sameSubnet -o <add/del>

vpn sameSubnet -v

vpn sameSubnet -m <1/2>

Syntax Description

Parameter	Description
-i <value>	Specify the index number of VPN profile.
-E <0/1>	Enable or disable the IPsec with the same subnet. 1 - enable. 0 - disable.
-e <value>	Translate specified LAN to virtual subnet. 1 - LAN1 2 - LAN2 3 - LAN3 ...
-l <Virtual Subnet>	Set the virtual subnet (e.g., 172.16.3.250).
-o <add/del>	Set the operation.
-v	Display current status of virtual subnet.
-m <1/2>	Set the translated type. <1/2>: Enter a number. 1 means the Whole Subnet; 2 means Specific IP.

Example

```

> vpn sameS -i 1 -e 1 -E 1 -e 1 -I 10.10.10.0 -o add
  Enable IPsec with Same Subnet !!

  Add entry Success!!
> vpn sameS -v
IPsec with the same subnet:
VPN profile 1 enable,
  Whole Subnet:
    translated LAN1 to Virtual subnet: 10.10.10.0

```

Telnet Command: wan ppp_mru

This command allows users to adjust the size of PPP LCP MRU. It is used for specific network.

Syntax

wan ppp_mru <WAN interface number> <MRU size >

Syntax Description

Parameter	Description
<WAN interface number>	Type a number to represent the physical interface. For Vigor130, the number is 1 (which means WAN1).
<MRU size >	It means the number of PPP LCP MRU. The available range is from 1400 to 1600.

Example

```

>wan ppp_mru 1 ?
% Now: 1492

> wan ppp_mru 1 1490
>
> wan ppp_mru 1 ?
% Now: 1490

> wan ppp_mru 1 1492
> wan ppp_mru 1 ?
% Now: 1492

```

Telnet Command: wan mtu

This command allows users to adjust the size of MTU for WAN.

Syntax

wan mtu <value>

Syntax Description

Parameter	Description
<value>	It means the number of MTU for PPP. The available range is from 1000 to 1500.

	For Static IP/DHCP, the maximum number will be 1500.
	For PPPoE, the maximum number will be 1492.
	For PPTP/L2TP, the maximum number will be 1460.

Example

```
> wan mtu 1100
> wan mtu ?
Static IP/DHCP (Max MSS: 1500)
PPPoE(Max MSS: 1492)
PPTP/L2TP(Max MSS: 1460)
% wan ppp_mss <MSS size: 1000 ~ 1500>
% Now: 1100
```

Telnet Command: wan dns

This command allows users to configure primary and / or secondary DNS server.

Syntax

```
wan dns <wan_no> <dns_select> <ipv4_addr>
```

Syntax Description

Parameter	Description
<wan_no>	Select WAN interface. 1 - WAN1
<dns_select>	Specify primary and / or secondary DNS server. pri - It means primary DNS server. sec - It means secondary DNS server.
<ipv4_addr>	Enter the IP address of DNS server.

Example

```
> wan dns 1 pri 168.95.1.1
% Set WAN1 primary DNS done.
% Now: 168.95.1.1
```

Telnet Command: wan DF_check

This command allows you to enable or disable the function of DF (Don't fragment)

Syntax

```
wan DF_check <on/off>
```

Syntax Description

Parameter	Description
<on/off>	It means to enable or disable DF.

Example

```
> wan DF_check on
%DF bit check enable!
> wan DF_check off
%DF bit check disable (reset DF bit)!
```

Telnet Command: wan disable

This command allows you to disable WAN connection.

Example

```
> wan disable WAN
%WAN disabled.
```

Telnet Command: wan enable

This command allows you to disable wan connection.

Example

```
> wan enable WAN
%WAN1 enabled.
```

Telnet Command: wan forward

This command allows you to enable or disable the function of WAN forwarding. The packets are allowed to be transmitted between different WANs.

Syntax

`wan forward <on/off>`

Syntax Description

Parameter	Description
<code><on/off></code>	It means to enable or disable WAN forward.

Example

```
> wan forward ?
%WAN forwarding is Disable!

> wan forward on
%WAN forwarding is enable!
```

Telnet Command: wan status

This command allows you to display the status of WAN connection, including connection mode, TX/RX packets, DNS settings and IP address.

Example

```
> wan status
WAN1: Offline, stall=N
Mode: ---, Up Time=00:00:00
IP=---, GW IP=---
TX Packets=0, TX Rate(bps)=0, RX Packets=0, RX Rate(bps)=0
Primary DNS=0.0.0.0, Secondary DNS=0.0.0.0

PVC_WAN3: Offline, stall=N
Mode: ---, Up Time=00:00:00
IP=---, GW IP=---
TX Packets=0, TX Rate(bps)=0, RX Packets=0, RX Rate(bps)=0
Primary DNS=0.0.0.0, Secondary DNS=0.0.0.0

PVC_WAN4: Offline, stall=N
Mode: ---, Up Time=00:00:00
IP=---, GW IP=---
TX Packets=0, TX Rate(bps)=0, RX Packets=0, RX Rate(bps)=0

PVC_WAN5: Offline, stall=N
Mode: ---, Up Time=00:00:00
IP=---, GW IP=---
TX Packets=0, TX Rate(bps)=0, RX Packets=0, RX Rate(bps)=0

PVC_WAN6: Offline, stall=N

Mode: ---, Up Time=00:00:00
IP=---, GW IP=---
TX Packets=0, TX Rate(bps)=0, RX Packets=0, RX Rate(bps)=0 TX Packets=0, TX
Rate(Bps)=0, RX Packets=0, RX Rate(Bps)=0
--- MORE --- ['q': Quit, 'Enter': New Lines, 'Space Bar': Next Page] ---
```

Telnet Command: wan modem

This command, wan modem, allows you to configure 3G/4G USB Modem (PPP mode) of WAN3.

Syntax

```
wan modem <init/dial/pin> <string>
wan modem dial <string>
wan modem pin <1/0>
wan modem paponly <on/off>
wan modem backup_wait <value>
wan modem pipe <Int><Din><Dout> (for USB WAN3 only)
wan modem wakeup <on/off/value> (for USB WAN3 only)
wan modem status
```

Syntax Description

Parameter	Description
<i>init</i>	Set initial modem AT command (default value is

	"AT&FE0V1X1&D2&C1S0=0").
<i>dial</i> <string>	Set dial modem AT command. <string>: Enter a string. (default value is "ATDT*99#").
<i>pin</i> <0>	Set PIN code for SIM card. "0":disable
<i>paponly</i> <on/off>	It means PAP Only. Set the PPP authentication of the USB WAN. on: None. off: PAP or CHAP.
<i>backup_wait</i> <value>	Set waiting time after boot if USB WAN is in backup mode. This waiting time is reserved for the dial of main WANs so that the backup USB WAN will not go up first. Available setting is from 1 to 255. Unit is second.
<i>pipe</i>	It is for RD debug only. Please don't use it without our advice.
<i>wakeup</i> [on/off]	It is for RD debug only. Please don't use it without our advice.
<i>status</i>	Display current status of USB modem.

Example

```

> wan modem pin 0
> wan modem status
Modem Link Speed=0
Current Signal Strength=0
Last Fail Message:
Current Connect Stage:

```

Telnet Command: wan lte

This command allows you to configure LTE WAN (for L model only).

Syntax

wan lte auth <0/1>

wan lte band

wan lte del <index #/all>

wan lte pass <string>

wan lte quota [-<command><parameter>I...]

wan lte read <index #/all>

wan lte reboot [-<command><parameter>I...]

wan lte reply [-<command><parameter>I...]

wan lte send <number><message>

wan lte stus

wan lte tag <index #/all>

wan lte user <string>

wan lte wms send <cdma/gwpp> / recv <cdma/gwggw>

wan lte wms setting

Syntax Description

Parameter	Description
<i>auth</i> <0/1>	Set PPP authentication of LTE WAN. 0: None. 1: PAP or CHAP.
<i>band</i>	Display working band information for LTE network connection.
<i>del</i> <index #/all>	Delete an SMS from the LTE SIM card by specifying the index number. Use "all" to delete all.
<i>pass</i> <string>	Set the password of LTE WAN.
<i>quota</i> [-<command><parameter>I...]]	Set settings of SMS Quota Limit function. Available commands with parameter are listed below: [...] means that you can Enter several commands in one line. -a <0/1>: Set whether to send an e-mail alert when SMS quota exceeded. (0: no 1: yes) -c <cycle>: Set the order of today in refresh cycle. -d <day>: Set the refresh day. -e <0/1>: Enable or disable SMS Quota Limit function. (0: disable 1: enable) -h <hour>: Set the refresh hour. -m <0/1/2>: Set SMS quota refresh mode. (0: None 1: monthly 2: periodically) -n <number>: Set SMS quota. The available number is between 1 and 1000000. -s <0/1>: Set whether to stop sending SMS after SMS quota exceeded. (0: no 1: yes)
<i>read</i> <index #/all>	Display information of an SMS in the LTE SIM card by specifying the index number. Use "all" to display all.

<i>reboot</i>	<p>Set settings of Reboot on SMS Message function.</p> <p><command> <parameter> ...</p> <p>The available commands with parameters are listed below.</p> <p>[...] means that you can Enter several commands in one line.</p> <p>-a <0/1>: Enable or disable Access Control List. (0: disable 1: enable)</p> <p>-e <0/1>: Enable or disable Reboot on SMS Message function. (0: disable 1: enable)</p> <p>-p <password>: Set the Password / PIN. This setting is necessary if this function is enabled.</p> <p>-x <number>: Set the first phone number in Access Control List.</p> <p>-y <number>: Set the second phone number in Access Control List.</p> <p>-z <number>: Set the third phone number in Access Control List.</p>
<i>reply</i>	<p>Set settings of Reply with Router Status Message function.</p> <p><command> <parameter> ...</p> <p>The available commands with parameters are listed below.</p> <p>[...] means that you can Enter several commands in one line.</p> <p>-a <0/1>: Enable or disable Access Control List. (0: disable 1: enable)</p> <p>-c <0/1>: Set whether to reply with MAC address. (0: no 1: yes)</p> <p>-e <0/1>: Enable or disable Reboot on SMS Message function. (0: disable 1: enable)</p> <p>-f <0/1>: Set whether to reply with WAN1 IP address. (0: no 1: yes)</p> <p>-g <0/1>: Set whether to reply with WAN2 IP address. (0: no 1: yes)</p> <p>-h <0/1>: Set whether to reply with LTE WAN IP address. (0: no 1: yes)</p> <p>-i <0/1>: Set whether to reply with WAN4 IP address. (0: no 1: yes)</p> <p>-j <0/1>: Set whether to reply with WAN1 data usage. (0: no 1: yes)</p> <p>-k <0/1>: Set whether to reply with WAN2 data usage. (0: no 1: yes)</p> <p>-l <0/1>: Set whether to reply with LTE WAN data usage. (0: no 1: yes)</p> <p>-m <0/1>: Set whether to reply with WAN4 data usage. (0: no 1: yes)</p> <p>-n <0/1>: Set whether to reply with Router name. (0: no 1: yes)</p> <p>-p <password>: Set the Password / PIN. This setting is necessary if this function is enabled.</p> <p>-u <0/1>: Set whether to reply with Router system uptime. (0: no 1: yes)</p> <p>-v <0/1>: Set whether to reply with Router firmware version. (0: no 1: yes)</p> <p>-x <number>: Set the first phone number in Access Control List.</p> <p>-y <number>: Set the second phone number in Access Control List.</p> <p>-z <number>: Set the third phone number in Access Control List.</p>
<i>send <number><message></i>	Send an SMS message to the specified phone number through the LTE SIM card.
<i>stus</i>	Display status of LTE connection.
<i>tag <index #/all></i>	Set an SMS in the LTE SIM card as read state by specifying the index number. Use "all" to set all SMS as read state.
<i>user <string></i>	Set the UserName of LTE WAN.
<i>wms send <cdma/gwpp>/ wms recv <cdma/gwgw> wms setting</i>	This command is for RD debug only. We use it to test new USB modems. Please don't use it without our advice.

Example

```

> wan lte band

Access technology : LTE
Access band information : E-UTRA Op Band 3
Interfere with 2.4G WLAN : NO
Active channel: 1725
>wan lte stus
Status: Operational. (Online)
Access Tech: LTE
Band: E-UTRA Op Band 3
ISP: Chunghwa
MCC: 466, MNC: 92, LAC: 65534, Cell ID: 81023501
Max Channel TX Rate: 50000000 bps
Max Channel RX Rate: 100000000 bps
IMEI: 356318040749422
IMSI: 466924200859808
RSSI: -61 dBm
Unread SMS: 4
SMSC address: +886932400821
SMS service status : Ready
Number of SMS sent : 0

```

Telnet Command: wan detect

This command allows you to configure WAN connection detection. When Ping Detection is enabled (for Static IP or DHCP or PPPoE mode), Router pings specified IP addresses to detect the WAN connection.

Syntax

```

wan detect <wan1> <on/off/strict/always_on>
wan detect <wan1> <on/off> -t <time>
wan detect <wan1> <on/off> -i <interval>
wan detect <wan1> target <ip addr>
wan detect <wan1> target2 <ip addr>
wan detect <wan1> target_gw <1/0>
wan detect <wan1> ttl <value>
wan detect <wan1> interval <interval>
wan detect <wan1> retry <retry>
wan detect status

```

Syntax Description

Parameter	Description
<on/off/strict/always_on>	<p>On: Enable ping detection. The IP address of the target shall be set.</p> <p>Off: Enable ARP detection (default). Time and interval should be set.</p> <p>strict: Enable the strict ARP detection. Time and interval should be set.</p> <p>always_on: Disable link detect, always connected(only support static IP)</p>

<i>-t <time></i>	Set the time for ARP detect or strict ARP detection.
<i>-i <interval></i>	Set the interval for ARP detect or strict ARP detection.
<i>target <ip addr></i>	Set the ping target. <ip addr>: It means the IP address used for detection. Type an IP address (e.g., 192.168.1.10) in this field.
<i>target2<ip addr></i>	Set the secondary ping target. <ip addr>: It means the IP address used for detection. Type an IP address (e.g., 192.168.1.10) in this field.
<i>target_gw <1/0></i>	Set whether to use gateway as ping target. 1: yes 0: no Note that USB WAN (PPP mode) cannot support PING gateway
<i>ttl <1-255></i>	It means to set the ping TTL value (work as trace route) If you do not set any value for ttl here or just type 0 here, the system will use default setting (255) as the ttl value.
<i>interval <interval></i>	Set the interval between each ping operation. Available setting is between 1 and 3600. The unit is second. <interval>: Type a value.
<i>retry <retry></i>	Set how many ping operations are retried before the Router judges that the WAN connection is disconnected. Available setting is between 1 and 255. The unit is times. <retry>: Type a number.
<i>status</i>	It means to show the current status.

Example

```

> wan detect status
WAN1: arp detect, send time=30, Interval = 5
WAN2: arp detect, send time=30, Interval = 5
WAN3: arp detect, send time=30, Interval = 5
WAN4: arp detect, send time=30, Interval = 5
WAN5: arp detect, send time=30, Interval = 5
WAN6: arp detect, send time=30, Interval = 5
> wan detect wan1 target 192.168.1.78
Set OK
> wan detect wan1 on
Set OK

> wan detect status
WAN1: ping detect, Target=192.168.1.78, TTL=255, Target2=0.0.0.0,
TargetGW=off,
Interval=1, Retry=10
WAN2: arp detect, send time=30, Interval = 5
WAN3: arp detect, send time=30, Interval = 5
WAN4: arp detect, send time=30, Interval = 5
WAN5: arp detect, send time=30, Interval = 5
WAN6: arp detect, send time=30, Interval = 5
>

```

Telnet Command: wan mvlan

This command allows you to configure multi-VLAN for WAN and LAN. It supports pure bridge mode (modem mode) between Ethernet WAN and LAN port 2~4.

Syntax

`wan mvlan <pvc_no/status/save/enable/disable> <on/off/clear/tag tag_no> <service type/vlan priority> <px ... >`

`wan mvlan keptag <pvc_no> <on/off>`

Syntax Description

Parameter	Description
<i>pvc_no</i>	It means index number of PVC. There are 10 PVC, 0(Channel-1) to 9(Channel-9) allowed to be configured. However, bridge mode can be set on PVC number 2 to 9.
<i>status</i>	It means to display the whole Bridge status.
<i>save</i>	It means to save the configuration into flash of Vigor router.
<i>enable/disable</i>	It means to enable/disable the Multi-VLAN function.
<i>on/off</i>	It means to turn on/off bridge mode for the specific channel.
<i>clear</i>	It means to turn off/clear the port.
<i>tag tag_no</i>	It means to tag a number for the VLAN. -1: No need to add tag number. 1-4095: Available setting numbers used as tagged number.
<i>service type</i>	It means to specify the service type for VLAN. 0: Normal. 1: IGMP.
<i>vlan priority</i>	It means to specify the priority for the VALN setting. Range is from 0 to 7.
<i>px</i>	It means LAN port. Available setting number is from 2 to 4. Port number 1 is locked for NAT usage.
<i>keptag</i>	It means Multi-VLAN packets will keep their VLAN headers to LAN.

Example

PVC 7 will map to LAN port 2/3/4 in bridge mode; service type is Normal. No tag added.

```
> wan mvlan 7 on p2 p3 p4
PVC Bridge p1 p2 p3 p4 p5 p6 Service Type Tag Priority Keep Tag
-----
7 ON 0 0 1 1 0 0 Normal 0(OFF) 0 OFF
>
```

Telnet Command: wan multifno

This command allows you to specify a channel (in Multi-PVC/VLAN) to make bridge connection to a specified WAN interface.

Syntax

```
wan multifno <channel #> <WAN interface #>
```

```
wan multifno status
```

Syntax Description

Parameter	Description
<channel #>	There are several channels for bridge connection. Available settings are: 4=Channel 4 5=Channel 5 ... 10=Channel 10
<WAN interface #>	Type a number to indicate the WAN interface. 1=WAN1
status	It means to display current bridge status.

Example

```
> wan multifno 5 1
% Configured channel 5 uplink to WAN1
> wan multifno status
% Channel 4 uplink ifno: 3
% Channel 5 uplink ifno: 3
% Channel 6 uplink ifno: 3
% Channel 7 uplink ifno: 3
% Channel 8 uplink ifno: 3
% Channel 9 uplink ifno: 3
>
```

Telnet Command: wan vlan

This command allows you to configure the VLAN tag of WAN1 or WAN2.

Syntax

```
wan vlan wan <#> tag <value>
```

```
wan vlan wan <#> <enable/disable>
```

```
wan vlan stat
```

Syntax Description

Parameter	Description
wan <#>	Specify which WAN interface will be tagged.
tag <value>	Type a number for tagging on WAN interface.
<enable/disable>	Enable: Specified WAN interface will be tagged. Disable: Disable the function of tagging on WAN interface.

<i>stat</i>	Display current VLAN status.
-------------	------------------------------

Example

```

> wan vlan stat
% Interface      Pri  Tag   Enabled
% =====
% WAN1           0    0
% WAN2           0    0

```

Telnet Command: wan phyvlan

This command is used to set VLAN tag insertion for outer tag (service) for WAN interface. WAN interfaces must be configured first before setting VLAN encapsulation.

Syntax

- wan phyvlan wan <#> tag <value>
- wan phyvlan wan <#> pri <value>
- wan phyvlan wan <#> <enable/disable>
- wan phyvlan stat

Syntax Description

Parameter	Description
<#>	It means WAN interface. 1 - WAN1 2 - WAN2
tag <value>	It means to tag a value (1 to 4095) onto the selected WAN interface.
pri <value>	It means to set value (0 to 7) for priority for such VLAN tag.
<enable/disable>	It means to enable / disable the VLAN tag.
stat	Display the setting status.

Example

```

> wan phyvlan wan 1 tag 22
% Set physical port tag to 22 for WAN1
% Set physical port tag to 22 for WAN1
% You need to reboot router making config effective
> wan phyvlan stat ?
% Interface      Pri  Tag   Enabled
% =====
% WAN1           0    22
% WAN2           0    0
>

```

Telnet Command: wan budget

This command allows you determine the data *traffic volume* for each WAN interface respectively to prevent from overcharges for data transmission by the ISP.

Syntax

```

wan budget wan <#> rdate <day><hour>
wan budget wan <#> <enable/disable>
wan budget wan <#> thres <budget limit (MB)>
wan budget wan <#> gthres <budget limit (GB)>
wan budget wan <#> mode <monthly/periodic/none>
wan budget wan <#> psday <th day in periodic>
wan budget wan <#> custom_mode <0/1>
wan budget wan <#> custom_mode_reset_hour <hour>
wan budget wan <#> action <action bitmap>
wan budget status
  
```

Syntax Description

Parameter	Description
<i>wan <#> rdate <day><hour></i>	<p>wan <#>: Specify the WAN interface.</p> <p>rdate <day><hour>: Specify the WAN budget refresh time.</p> <p>day - Available settings are from 1 to 30.</p> <p>hour - Available settings are from 1 to 23.</p> <p>E.g., wan budget wan 1 rdate 5 10</p> <p>If monthly mode is selected: WAN budget will be refreshed on 5th day at 10:00 in each month.</p> <p>If periodic mode is selected: WAN budget will be refreshed every 5 days and 10 hours.</p>
<i><enable/disable></i>	<p>enable - Enable the function of wan budget.</p> <p>disable - Disable the function of wan budget.</p>
<i>thres <budget limit (MB)></i>	<p>Specify the maximum value for WAN budget limit. (Unit: MB)</p> <p>budget limit - Type a number.</p>
<i>gthres <budget limit (GB)></i>	<p>Specify the maximum value of wan budget limit. (Unit: GB)</p> <p>budget limit - Type a number.</p>
<i>mode <monthly/periodic/none></i>	<p>Specify the calculation mode (monthly, periodically, or none) for WAN budget.</p>
<i>psday <th day in periodic></i>	<p>It is used only when mode is set with "periodic". Specify the order of "today" in the cycle.</p> <p>E.g., wan budget wan 5 psday → It means "today" is the 5th day in the billing cycle.</p>
<i>custom_mode <0/1></i>	<p>Set the custom mode (cycle in hours or in days).</p> <p>0: cycle_in_hours</p> <p>1: cycle_in_days</p>
<i>custom_mode_reset_hour <hour></i>	<p>Set the reset hour value.</p> <p>hour: Enter 1 to 23.</p>
<i>action <action bitmap></i>	<p>Determine the action to be performed when it reaches the WAN budget limit.</p> <p><i>action bitmap</i> - Type a total number of actions to be executed. Different numbers represent different actions.</p> <p>1: shutdown wan</p>

	2: send mail alert 4: send sms alert For example, if you type "5" (5=1+4), the system will send SMS alert when WAN shutdown is detected.
<i>status</i>	Display current configuration status of WAN budget.

Example

```
> wan budget wan 1 action 5
% WAN 1 budget action set to 5
> wan budget wan 1 gthres 10
% WAN 1 budget limit set to 10 GB
> wan budget status
% WAN1 budget configuration:
% Status = Disabled
% Mode = No Refreshing
% Action = Shutdown WAN Send SMS
% Budget Limit = 10 GB
% WAN2 budget configuration:
% Status = Disabled
% Mode = No Refreshing
% Action = None
% Budget Limit = 0 MB
% WAN3 budget configuration:
% Status = Disabled
% Mode = No Refreshing
% Action = None
% Budget Limit = 0 MB
>
```

Telnet Command: wan detect_mtu

This command allows you to run a WAN MTU Discovery. The user can specify an IPv4 target to ping and find the suitable MTU size of the WAN interface.

Syntax

```
wan detect_mtu -i <Host/IP address> -s <mtu_size> -d <decrease size> -w <#> -c <count>
```

Syntax Description

Parameter	Description
<i>-i <Host/IP address></i>	Specify the IPv4 target to detect. It can be an IPv4 address or domain name. Host/IP address: Enter the IP address/domain name of the target.
<i>-s <mtu_size></i>	Set the MTU size base for Discovery. mtu_size: Available setting is 1000 ~ 1500.
<i>-d <decrease size></i>	Set the MTU size to decrease between detections. decrease size: Available setting is 1 ~ 100.
<i>-c <count></i>	Set the maximum times of ping failure during a Discovery. count: Available settings are 1 ~ 10. Default value is 3.

Example

```

> wan detect_mtu -w 2 -i 8.8.8.8 -s 1500 -d 30 -c 10

detecting mtu size:1500!!!

mtu size:1470!!!

```

Telnet Command: wan detect_mtu6

This command allows you to run a WAN MTU Discovery. The user can specify an IPv6 target to ping and find the suitable MTU size of the WAN interface.

Syntax

```
wan detect_mtu6 -i <Host/IP address> -s <mtu_size> -w <#>
```

Syntax Description

Parameter	Description
<i>-i <Host/IP address></i>	Specify the IPv6 target to detect. It must be an IPv6 IP address. IPv6 address: Enter the IPv6 address of the target.
<i>-s <mtu_size></i>	Specify the size of MTU. mtu_size: Available setting is 1280 ~ 1500.
<i>-w <#></i>	Specify the WAN interface. number: Enter the number of WAN interface. 1: WAN1.

Example

```

> wan detect_mtu6 -w 1 -i 2404:6800:4008:c06::5e -s 1500
>

```

Telnet Command: wan failover

This command is used to configure failover WAN.

Syntax

```
wan failover off <index>
```

```
wan failover on <1><2><3><4><5><6>
```

```
wan failover show <index>
```

Syntax Description

Parameter	Description
<i>failover off <index></i>	Set specified WAN interface to always on. index - Ranges from 1 to 3.
<i>failover on</i> <i><1><2><3><4><5><6></i>	There are six fields which represent different options. Field 1 - Specify WAN interface as failover WAN by typing 1 to 3. Field 2 - Enable / disable the action for the failover WAN. Such action is "Active When selected WAN [disconnect/reached traffic

	<p>threshold]”.</p> <p>0 - Disable</p> <p>1 - Enable</p> <p>Field 3 - Enable / disable the action for the failover WAN. Such action is “Active When [any/all] of selected WAN disconnect or reached traffic threshold”.</p> <p>0 - Disable</p> <p>1 - Enable</p> <p>Field 4 - Specify main WAN by typing 1 to 3. The main WAN will be set to always on.</p> <p>Field 5 - Specify traffic threshold [Download threshold(Kbps)].</p> <p>Field 6 - Specify traffic threshold [Upload threshold (Kbps)].</p> <p>For example, WAN 2 will be set as failover, and will be active when any of selected WANs has reached traffic threshold. WAN 3 is the selected WAN. Download threshold : 50 Kbps; Upload threshold : 20 Kbps. You can type as follows:</p> <p style="text-align: center;"><i>wan failover on 2 1 0 3 50 20</i></p>
<i>show <index></i>	<p>Display parameters settings for WAN interface.</p> <p>index - Ranges from 1 to 4.</p>

Example

```

> wan failover on 2 1 0 3 50 20
> wan failover show 2
wan2 Active Mode : Failover
Active when : Any of the selected WANs reached the Traffic Threshold
Traffic Download Threshold : 50 Kbps
Traffic Upload Threshold : 20 Kbps
>

```

Telnet Command: hsportal

This command is used to configure a profile (Hotspot Web Portal) with specified URL for accessing into or display a message when a wireless/LAN user connects to Internet through this router.

Syntax

```
hsportal setup -p <profile> [-l <lan>] [-s <ssid>] ...
```

```
hsportal setup -p <profile> -c
```

Syntax Description

Parameter	Description
-p <profile>	Indicate available profile to be configured. <profile>: Enter the index number (1 to 4) of the profile.

<i>-l</i>	Apply to LAN interfaces (1 to 8). For example: hspportal setup -p 1 -l 1, 2 (apply LAN1 and LAN2)
<i>-s</i>	Apply to WLAN interfaces (1 to 4). For example: hspportal setup -p 1 -s 1, 2 (apply SSID1 and SSID2)
<i>-a</i>	Apply to WLAN5G interfaces (1 to 4). For example: hspportal setup -p 1 -a 1, 2 (apply SSID1 and SSID2)
<i>-m</i>	Select login mode. 0: skip 1: click 2: social 3: pin 4: social or pin For example: hspportal setup -p 1 -m 0
<i>-f <0/1></i>	It means to enable or disable the function of Configure facebook login. 0: disable. 1: enable.
<i>-g <0/1></i>	It means to enable or disable the function of Configure google login. 0: disable. 1: enable.
<i>-h <0/1></i>	It means to enable or disable the function of HTTPS redirection. 0: disable. 1: enable.
<i>-v <0/1></i>	It means to enable or disable the function of portal detection. 0: disable. 1: enable.
<i>-i <string></i>	It means to set APP ID. <string>: Enter a string as APP ID. For example, to configure facebook APP id, you can type: > hspportal set -p 1 -f 1 -i this_is_app_id Profile 1 set facebook login enabled ... [OK] Profile 1 set API ID ... [OK]
<i>-k <string></i>	It means to set APP key. <string>: Enter a string as APP key. For example, to configure google APP key, you can type: > hspportal set -p 1 -g 1 -k keyforapp Profile 1 set google login enabled ... [OK] Profile 1 set API KEY ... [OK]
<i>-r <0/1/2></i>	It means to set landing page mode. 0: fixed URL. 1: user request. 2: bulletin. For example, > hspportal set -p 1 -r 0 Profile 1 set landing page mode 0 ... [OK]
<i>-e</i>	It means to enable the specified profile.
<i>-d</i>	It means to disable the specified profile.
<i>-c <1/2/3/4></i>	Reset the specified profile. <1/2/3/4>: Enter the index number of profile.

	For example, > hsportal set -p 1 -c Reset profile 1 ... [OK]
-o	Clear profiles for all clients.
-t <value>	Set the expire time for the specified profile. <value>: Enter a number of time period (unit: minutes). For example, k> hsportal setup -p 1 -t 300 Profile 1 set expire time 300 mins ... [OK]

Example

```
> hsportal setup -p 1 -c
Reset profile 1 ... [OK]
> hsportal setup -p 1 -r 0
Profile 1 set landing page mode 0 ... [OK]
> hsportal setup -p 2 -g 1 -k app_key_google
Profile 2 set google login enabled ... [OK]
Profile 2 set API KEY ... [OK]
>
```

Telnet Command: hsportal level

This command allows the user to configure bandwidth and sessions quota which is only applicable to the web portal clients.

Syntax

hsportal level -p <index> [-e <enable>] [-t <mins>] ...

Syntax Description

Parameter	Description
-p <index>	It means to specify (add) a quota policy profile. <index>: Enter the index number (1 to 20) of the quota policy profile.
-e <0/1>	It means to enable or disable the quota policy profile. 0: disable. 1: enable.
-t <value>	It means to set expired time for quota policy. <value>: Enter a number (unit:minutes).
-i <0/1> -o <value>	It means to enable or disable the function of idle timeout 0: disable. 1: enable. If enabled, -o <value>: Set the idle timeout (unit:minutes) if idle timeout is enabled. For example: hsportal level -p 1 -e 1 -i 1 -o 300
-d <value>	It means to set the maximum number of devices that can be connected to the network using the same account. <value>: Enter a number (0 to 100). "0" means unlimited. For example: hsportal level -p 1 -e 1 -d 0

<code>-b <0/1></code>	It means to enable or disable the function of bandwidth limit. 0: disable. 1: enable.
<code>-ru <0/1></code>	It means to specify the bandwidth limit download unit. 0: kbps 1: mbps
<code>-tu <0/1></code>	It means to specify the bandwidth limit upload unit. 0: kbps. 1: mbps.
<code>-s <0/1></code>	It means to enable or disable the session limit. 0:disable. 1:enable.
<code>-n <value></code>	It means to set a maximum session limit. <value>: Enter a value (0 to 6000). For example: hspportal level -p 1 -s 1 -n
<code>-U <kbps/mbps></code>	It means to specify the bandwidth upload limit. kbps mbps
<code>-D <kbps/mbps></code>	It means to specify the bandwidth download limit. kbps mbps
<code>-c <index></code>	It means to delete a quota policy profile. <index>: Enter the index number (1 to 20) of the quota policy profile.
<code>-r <0/1></code>	It means to enable or disable the function of reconnection time restriction. 0:disable. 1:enable.
<code>-f <value></code>	It means to set a period of time to block the same user reconnecting to the network. <value>: Enter a number (1 to 1439 minutes). For example: hspportal level -p 1 -e 1 -r 1 -f 300
<code>-g <value></code>	It means to set a reconnection time to block the same user from reconnecting before the set time. <value>: Enter the hour (01 to 23) and the minutes (0-59) (unit: minutes). For example: hspportal level -p 1 -e 1 -r 1 -f 23:15 (The same user can reconnect after 23:15 every day)

Example

```
> hspportal level -p 1 -e 1 -r 1 -f 30000
>
```

Telnet Command: `wl acl`

This command allows the user to configure wireless access control settings.

Syntax

`wl acl enable <ssid1 ssid2 ssid3 ssid4>`

`wl acl disable <ssid1 ssid2 ssid3 ssid4>`

```

wl acl add <MAC> <ssid1 ssid2 ssid3 ssid4> <isolate>
wl acl del <MAC>
wl acl mode <ssid1 ssid2 ssid3 ssid4> <white/black>
wl acl show
wl acl showmode
wl acl clean

```

Syntax Description

Parameter	Description
<i>enable</i> <ssid1 ssid2 ssid3 ssid4>	It means to enable the settings for SSID1, SSID2, SSID3 and SSID4.
<i>disable</i> <ssid1 ssid2 ssid3 ssid4>	It means to disable the settings for SSID1, SSID2, SSID3 and SSID4.
<i>add</i> <MAC> <ssid1 ssid2 ssid3 ssid4> <isolate>	It means to associate a MAC address to certain SSID interfaces' access control settings. The isolate setting will limit the wireless client's network capabilities to accessing the wireless LAN only. [MAC] format: xx-xx-xx-xx-xx-xx or xx:xx:xx:xx:xx:xx or xx.xx.xx.xx.xx.xx
<i>del</i> <MAC>	It means to delete a MAC address entry defined in the access control list.
<i>mode</i> <ssid1 ssid2 ssid3 ssid4> <white/black>	It means to set white/black list for each SSID.
<i>wl acl show</i>	It means to show access control status.
<i>wl acl showmode</i>	It means to show the mode for each SSID.
<i>wl acl clean</i>	It means to clean all access control setting.

Example

```

> wl acl showmode
SSID1: None
SSID2: None
SSID3: None
SSID4: None
> wl acl add 00-50-70-ff-12-70 ssid1 ssid2 isolate
Set Done !!
> wl acl show
-----Mac Address Filter Status-----
SSID1: Disable
SSID2: Disable
SSID3: Disable
SSID4: Disable

-----MAC Address List-----
Index  Attribute      MAC Address      Associated SSIDs      Comment
  1      s              14:49:bc:0a:8a:b8  SSID1 SSID2

s: Isolate the station from LAN
>

```

Telnet Command: **wl config**

This command allows users to configure general settings and security settings for wireless connection.

Syntax

```

wl config mode <value>
wl config mode show
wl config channel <number>
wl config channel show
wl config preamble <enable>
wl config txburst <enable>
wl config ssid <ssid_num enable ssid_name <hidden_ssid>>
wl config security <SSID_NUMBER><mode>
wl config ratectl <ssid_num enable upload download >
wl config isolate <ssid_num lan member>
wl config dtim <value>/ show
wl config beaconperiod <value> / show
wl config radio <1/0>/show
wl config frag <value>/ show
wl config rts <value> / show
wl config rate_alg <value> / show
wl config country <value> / show

```

Syntax Description

Parameter	Description
<i>mode</i> <value>	It means to select connection mode for wireless connection. Available settings are: "11bgn", "11gn", "11n", "11bg", "11g", or "11b".
<i>mode show</i>	It means to display what the current wireless mode is.
<i>channel</i> <number>	It means the channel of frequency of the wireless LAN. The available settings are 0,1,2,3,4,5,6,7,8,9,10,11,12 and 13. number=0, means Auto number=1, means Channel 1 number=13, means Channel 13.
<i>channel show</i>	It means to display what the current channel is.
<i>preamble</i> <enable>	It means to define the length of the sync field in an 802.11 packet. Most modern wireless network uses short preamble with 56 bit sync field instead of long preamble with 128 bit sync field. However, some original 11b wireless network devices only support long preamble. 0: disable to use long preamble. 1: enable to use long preamble.
<i>preamble show</i>	It means to display if the current preamble is enabled or not.
<i>txburst</i> <enable>	It means to enhance the performance in data transmission about 40%* more (by enabling Tx Burst). It is active only when both sides of Access Point and Station (in wireless client) invoke this function at the same time. 0: disable the function.

	1: enable the function.
<i>ssid</i> <ssid_num enable ssid_name <hidden_ssid>>	It means to set the name of the SSID, hide the SSID if required. <i>ssid_num</i> : Type 1, 2, 3 or 4 to specify SSID1, SSID2, SSID3 or SSID4. <i>ssid_name</i> : Give a name for the specified SSID. <i>hidden_ssid</i> : Type 0 to hide the SSID or 1 to display the SSID
<i>security</i> <SSID_NUMBER><mode><key ><index>	It means to configure security settings for the wireless connection. <i>SSID_NUMBER</i> : Type 1, 2, 3 or 4 to specify SSID1, SSID2, SSID3 or SSID4. <i>mode</i> : Available settings are: disable: No security. wpa1x: WPA/802.1x Only wpa21x: WPA2/802.1x Only wpamix1x: Mixed (WPA+WPA2/802.1x only) wep1x: WEP/802.1x Only wpapsk: WPA/PSK wpa2psk: WPA2/PSK wpamixpsk: Mixed (WPA+WPA2)/PSK wep: WEP <i>key, index</i> : Moreover, you have to add keys for <i>wpapsk</i> , <i>wpa2psk</i> , <i>wpamixpsk</i> and <i>wep</i> , and specify index number of schedule profiles to be followed by the wireless connection. WEP keys must be in 5/13 ASCII text string or 10/26 Hexadecimal digit format; WPA keys must be in 8-63 ASCII text string or 64 Hexadecimal digit format.
<i>ratectl</i> <ssid_num enable upload download>	It means to set the rate control for the specified SSID. <i>ssid_num</i> : Choose 1, 2, 3 or 4 to specify SSID1, SSID2, SSID3 or SSID4. <i>enable</i> : It means to enable the function of the rate control for the specified SSID. 0: disable and 1:enable. <i>upload</i> : It means to configure the rate control (from 1kbps to 300 kbps) for data upload. The unit is kbps. <i>download</i> : It means to configure the rate control (from 1kbps to 300 kbps) for data download. The unit is kbps.
<i>isolate</i> <ssid_num lan member>	It means to isolate the wireless connection for LAN and/or Member. <i>ssid_num</i> : Choose 1, 2, 3 or 4 to specify SSID1, SSID2, SSID3 or SSID4. <i>lan</i> - It can make the wireless clients (stations) with remote-dial and LAN to LAN users not accessing for each other. Enter 1 to enable or 0 to disable. <i>member</i> - It can make the wireless clients (stations) with the same SSID not accessing for each other. Enter 1 to enable or 0 to disable.
<i>dtim</i> <value> / show	Set the DTIM value. value: 1 to 255 show: Display the DTIM setting.
<i>beaconperiod</i> <value> / show	Set the beaconperiod value. value: 20 to 1023 (milli-second) show: Display the beaconperiod setting.
<i>radio</i> <1/0>/show	Enable or disable the wireless radio. 1/0: Type 1 to enable; 0 to disable. show: Display the radio setting.
<i>frag</i> <value>/ show	Set the fragment value. value: 256 to 2346 show: Display the fragment setting.
<i>rts</i> <value> / show	Set the RTS value. value: 1 to 2347

	show: Display the RTS setting.
<i>rate_alg <value>/ show</i>	Set the algorithm for ALG rate. value: 0 for old algorithm; 1 for new algorithm. show: Display the ALG rate setting.
<i>country <value>/ show</i>	Set the country code for a country. value: two capital letters, e.g., TW, UK show: Display the country cod setting.

Example

```

> wl config mode 11bgn
Current mode is 11bgn
% <Note> Please restart wireless after you set the channel
> wl config channel 13
Current channel is 13
% <Note> Please restart wireless after you set the channel.
> wl config preamble 1
Long preamble is enabled
% <Note> Please restart wireless after you set the parameters.
> wl config ssid 1 enable dray
SSID Enable Hide_SSID Name
1 1 0 dray
% <Note> Please restart wireless after you set the parameters.
> wl config security 1 wpa1x
%% Configured Wlan Security Setting:
% SSID1
%% Mode: wpa1x
%% Wireless card must be reset for configurations to take effect
%% (Telnet Command: wl restart)

```

Telnet Command: wl set

This command allows users to configure basic wireless settings.

Syntax

wl set <SSID> <CHAN<En>>

wl set txburst <enable>

Syntax Description

Parameter	Description
<i><SSID></i>	It means to Enter the SSID for the router. The maximum character that you can use is 32.
<i><CHAN<En>></i>	It means to specify required channel for the router. <i>CHAN</i> : The range for the number is between 1 ~ 13. <i>En</i> : type <i>on</i> to enable the function; type <i>off</i> to disable the function.
<i>txburst <enable></i>	It means to enhance the performance in data transmission about 40%* more (by enabling Tx Burst). It is active only when both sides of Access Point and Station (in wireless client) invoke this function at the same time. 0: disable the function. 1: enable the function.

Example

```
> wl set MKT 2 on
% New Wlan Setting is:
% SSID=MKT
% Chan=2
% Wl is Enable
>
```

Telnet Command: wl act

This command allows users to activate wireless settings.

Syntax

`wl act <En>`

Syntax Description

Parameter	Description
<En>	It means to enable or disable the function of VPN isolation. 0: diable 1: enable

Example

```
> wl act on
% Set Wlan to Enable.
```

Telnet Command: wl stamgt

This command is used to configure connection time and reconnection time for each SSID that wireless client used for accessing into Internet.

Syntax

`wl stamgt <enable/disable> <ssid_num>`

`wl stamgt show <ssid_num>`

`wl stamgt set <ssid_num> <c> <r>`

`wl stamgt reset <ssid_num>`

Syntax Description

Parameter	Description
<enable/disable>	It means to enable/disable the station management control.
<ssid_num>	It means channel selection. Available channel for 2.4G: 0/1/2/3 Available channel for 5G: 4/5/6/7.
show	It means to display status or configuration of the selected channel.
c	It means connection time. The unit is minute.
r	It means reconnection time. The unit is minute.

Example

```
> wl stamgt enable 1
% Station Management Status: enabled
> wl stamgt set 1 60 60
> wl stamgt show 1
NO. SSID          BSSID          Connect time  Reconnect time
1.  Draytek      00:11:22:aa:bb:cc 0d:0:58:26   0d:0:0
```

Telnet Command: wl iso_vpn

This command allows users to activate the function of VPN isolation.

Syntax

```
wl iso_vpn <ssid> <En>
```

Syntax Description

Parameter	Description
<i>ssid</i>	It means the number of SSID. 1: SSID1 2: SSID2 3: SSID3 4: SSID4
<i>En</i>	It means to enable or disable the function of VPN isolation. 0: disable 1: enable

Example

```
> wl iso_vpn 1 on
% ssid: 1 isolate vpn on :1
```

Telnet Command: wl wmm

This command allows users to set WMM for wireless connection. It defines the priority levels for four access categories derived from 802.1d (prioritization tabs).

Syntax

```
wl wmm ap QueIdx Aifsn Cwmin Cwmax Txop ACM
wl wmm bss QueIdx Aifsn Cwmin Cwmax Txop ACM
wl wmm ack Que0_Ack Que1_Ack Que2_Ack Que3_Ack
wl wmm enable SSID0 SSID1 SSID2 SSID3
wl wmm apsd value
wl wmm show
```

Syntax Description

Parameter	Description
-----------	-------------

<i>ap</i>	It means to set WMM for access point.
<i>bss</i>	It means to set WMM for wireless clients.
<i>ack</i>	It means to map to the Ack policy settings of AP WMM.
<i>enable</i>	It means to enable the WMM for each SSID. 0: disable 1: enable
<i>Apsd [value]</i>	It means to enable / disable the ASPD(automatic power-save delivery) function. 0: disable 1: enable
<i>show</i>	It displays current status of WMM.
<i>QueIdx</i>	It means the number of the queue which the WMM settings will be applied to. There are four queues, best effort, background, voice, and video.
<i>Aifsn</i>	It controls how long the client waits for each data transmission.
<i>Cwmin/ Cwmax</i>	CWMin means contention Window-Min and CWMax means contention Window-Max. Specify the value ranging from 1 to 15.
<i>Txop</i>	It means transmission opportunity. Specify the value ranging from 0 to 65535.
<i>ACM</i>	It can restrict stations from using specific category class if it is enabled. 0: disable 1: enable

Example

```

> wl wmm ap 0 3 4 6 0 0
  QueIdx=0: APAifsn=3,APCwmin=4,APCwmax=6, APTxop=0,APACM=0
> wl wmm enable 1 0 1 0
  WMM_SSID0 =1, WMM_SSID1 =0,WMM_SSID2 =1,WMM_SSID3 =0
> wl wmm show
  Enable WMM: SSID0 =1, SSID1 =0,SSID2 =1,SSID3 =0
  APSD=0
  QueIdx=0: APAifsn=3,APCwmin=4,APCwmax=6, APTxop=0,APACM=0
  QueIdx=1: APAifsn=7,APCwmin=4,APCwmax=10, APTxop=0,APACM=0
  QueIdx=2: APAifsn=1,APCwmin=3,APCwmax=4, APTxop=94,APACM=0
  QueIdx=3: APAifsn=1,APCwmin=2,APCwmax=3, APTxop=47,APACM=0
  QueIdx=0: BSSAifsn=3,BSSCwmin=4,BSSCwmax=10, BSSTxop=0,BSSACM=0
  QueIdx=1: BSSAifsn=7,BSSCwmin=4,BSSCwmax=10, BSSTxop=0,BSSACM=0
  QueIdx=2: BSSAifsn=2,BSSCwmin=3,BSSCwmax=4, BSSTxop=94,BSSACM=0
  QueIdx=3: BSSAifsn=2,BSSCwmin=2,BSSCwmax=3, BSSTxop=47,BSSACM=0
  AckPolicy[0]=0: AckPolicy[1]=0,AckPolicy[2]=0,AckPolicy[3]=0

```

Telnet Command: *wl ht*

This command allows you to configure wireless settings.

Syntax

wl ht bw value

wl ht gi value

wl ht badecline value

wl ht autoba value

wl ht rdg value

wl ht msdu value

wl ht txpower value

wl ht antenna value

wl ht greenfield value

Syntax Description

Parameter	Description
<i>wl ht bw value</i>	The value you can type is 0 (for BW_20), 1 (for BW_20_40) and 2 (BW_40).
<i>wl ht gi value</i>	The value you can type is 0 (for GI_800) and 1 (for GI_400)
<i>wl ht badecline value</i>	The value you can type is 0 (for disabling) and 1 (for enabling).
<i>wl ht autoba value</i>	The value you can type is 0 (for disabling) and 1 (for enabling).
<i>wl ht rdg value</i>	The value you can type is 0 (for disabling) and 1 (for enabling).
<i>wl ht msdu value</i>	The value you can type is 0 (for disabling) and 1 (for enabling).
<i>wl ht txpower value</i>	The value you can type ranges from 1 - 6 (level).
<i>wl ht antenna value</i>	The value you can type ranges from 0-3. 0: 2T3R 1: 2T2R 2: 1T2R 3: 1T1R
<i>wl ht greenfield value</i>	The value you can type is 0 (for mixed mode) and 1 (for green field).

Example

```
> wl ht bw value 1
  BW=0
  <Note> Please restart wireless after you set new parameters.
> wl restart
  Wireless restart.....
```

Telnet Command: wl restart

This command allows you to restart wireless setting.

Example

```
> wl restart
Wireless restart.....
```

Telnet Command: wl wds

This command allows you to configure WDS settings.

Syntax

`wl wds mode <value>`

`wl wds security <value>`

`wl wds ap <value>`

`wl wds hello <value>`

`wl wds status`

`wl wds show`

`wl wds mac <value>`

`wl wds flush`

Syntax Description

Parameter	Description
<i>mode <value></i>	It means to specify connection mode for WDS. [value]: Available settings are : d: Disable b: Bridge r: Repeater
<i>security <value></i>	It means to configure security mode with encrypted keys for WDS. <i>mode</i> : Available settings are: disable: No security. wep: WEP wpapsk [key]: WPA/PSK wpa2psk [key]: WPA2/PSK <i>key</i> : Moreover, you have to add keys for <i>wpapsk</i> , <i>wpa2psk</i> , and <i>wep</i> , and specify index number of schedule profiles to be followed by the wireless connection. WEP keys must be in 5/13 ASCII text string or 10/26 Hexadecimal digit format; WPA keys must be in 8-63 ASCII text string or 64 Hexadecimal digit format. e.g., <code>wl dual wds security disable</code> <code>wl dual wds security wep 12345</code> <code>wl dual wds security wpa2psk 12345678</code>
<i>ap <value></i>	It means to enable or disable the AP function. Value: 1 - enable the function. 0 - disable the function.

<i>hello <value></i>	It means to send hello message to remote end (peer). Value: 1 - enable the function. 0 - disable the function.
<i>status</i>	It means to display WDS link status for 2.4GHz connection.
<i>show</i>	It means to display current WDS settings.
<i>mac add <index addr></i>	add [<i>index addr</i>] - Add the peer MAC entry in Repeater/Bridge WDS MAC table.
<i>mac clear/disable/enable <index/all></i>	clear/disable/enable <index/all> - Clear, disable, enable the specified or all MAC entries in Repeater/Bridge WDS MAC table. e.g, <i>wl dual wds mac enable 1</i>
<i>flush</i>	It means to reset all WDS setting.

Example

```
> wl wds status
Please enable WDS hello function first.

> wl wds hello 1
% <Note> Please restart router after you set the parameters.

> wl wds status
```

Telnet Command: wl btncctl

This command allows you to enable or disable wireless button control.

Syntax

wl btncctl <value>

Syntax Description

Parameter	Description
<i><value></i>	0: disable 1: enable

Example

```
> wl btncctl 1
Enable wireless botton control
Current wireless botton control is on
>
```

Telnet Command: wl iwpriv / wl efuse

This command is reserved for RD debug. Do not use them.

Telnet Command: wl stalist

This command is used to display the wireless station which accessing Internet via Vigor router.

Syntax

wl stalist

wl stalist num

wl stalist neighbor

wl stalist validtime <time>

wl stalist maxnum <num>

Syntax Description

Parameter	Description
<i>num</i>	Display the wireless station list.
<i>neighbor</i>	Display the number of the wireless stations.
<i>validtime <time></i>	Set the valid time (0 to 300000) of neighbor station list.
<i>maxnum <num></i>	Set the maximum number (10 to 512) of neighbor station list.

Example

```
> wl stalist show
2.4G Wireless Station List :
Index  Status  IP Address      MAC Address      Associated with

Status Codes :
C: Connected, No encryption.
E: Connected, WEP.
P: Connected, WPA.
A: Connected, WPA2.
B: Blocked by Access Control.
N: Connecting.
F: Fail to pass WPA/PSK authentication.
```

Telnet Command: wl bndstrg

This command allows users to configure settings for Band Steering (2.4GHz).

Syntax

wl bndstrg show

wl bndstrg enable <1/0>

wl bndstrg chk_time <value>

Syntax Description

Parameter	Description
<i>show</i>	Display current status for Band Steering function.
<i>enable <1/0></i>	It means to enable wireless 2.4GHz AP client mode. 1 - enable 0 - disable

<i>chk_time</i> <value>	If the wireless station does not have the capability of 5GHz network connection, the system shall wait and check for several seconds (15 seconds, in default) to make the 2.4GHz network connection. Specify the time limit for Vigor router to detect the wireless client. <value>- 1 to 60 seconds.
-------------------------	--

Example

```
> wl bndstrg show
band steering: disable
chk_time: 15 sec
> wl bndstrg chk_time 50 30
argv[0]:chk_time, argv[1]:50, argv[2]:30

%% Wireless card must be reset for configurations to take effect
%% (Telnet Command: wl restart)
```

Telnet Command: wl artfns

This command allows users to configure airtime fairness function for wireless (2.4GHz) connection.

Syntax

```
wl artfns enable <value>
wl artfns trg_num <value>
wl artfns show
```

Syntax Description

Parameter	Description
<i>enable</i> <value>	It means to enable wireless airtime fairness function. 1 - enable 0 - disable
<i>trg_num</i> <value>	Set a threshold when the active station number achieves this number, the airtime fairness function will be applied. Available values will be 2 to 64.
<i>show</i>	Display current status (enable or disable) and triggering client number for airtime fairness function.

Example

```
> wl artfns enable 1
> wl artfns trg_num 3
> wl artfns show
airtime fairness: enable
trg_num: 3
>
```

Telnet Command: wl drays

This command allows the user to configure settings for Roaming for wireless clients.

Syntax

```
wl drayrs set <mode><rs_low><rs_low_security><delta>
wl drayrs restart
wl drayrs show
```

Syntax Description

Parameter	Description
<i>set</i> <mode> <rs_low> <rs_low_security> <delta>	Select a mode for roaming. 0 - disable 1 - Strictly Minimum RSSI 2 - Minimum RSSI rs_low - Set a value of Strictly Minimum RSSI (62-86). rs_low_security - Set a value of Minimum RSSI (62-86). delta - Set a value of Adjacent AP RSSI (1-20).
<i>restart</i>	Restart to activate roaming function.
<i>show</i>	Dispaly current configuration of roaming function.

Example

```
> wl drayrs show
% Mode : Disable
% rs_low      : -73
% rs_low_secure : -66
% delta      : 5
>
```

Telnet Command: wl_dual acl

This command allows the user to configure wireless (5GHz) access control settings.

Syntax

```
wl_dual acl enable <ssid1 ssid2 ssid3 ssid4>
wl_dual acl disable <ssid1 ssid2 ssid3 ssid4>
wl_dual acl add <MAC><ssid1 ssid2 ssid3 ssid4><isolate>
wl_dual acl del <MAC>
wl_dual acl mode <ssid1 ssid2 ssid3 ssid4> <white/black>
wl_dual acl show
wl_dual acl showmode
wl_dual acl clear
```

Syntax Description

Parameter	Description
<i>enable</i> <ssid1 ssid2 ssid3 ssid4>	It means to enable the settings for SSID1, SSID2, SSID3 and SSID4.
<i>disable</i> <ssid1 ssid2 ssid3 ssid4>	It means to disable the settings for SSID1, SSID2, SSID3 and SSID4.
<i>add</i> <MAC><ssid1 ssid2 ssid3 ssid4><isolate>	It means to associate a MAC address to certain SSID interfaces' access control settings. The isolate setting will limit the wireless

	<p>client's network capabilities to accessing the wireless LAN only.</p> <p>[MAC] format: xx-xx-xx-xx-xx-xx</p> <p>or xx:xx:xx:xx:xx:xx</p> <p>or xx.xx.xx.xx.xx.xx</p> <p><i>isolate</i>: It means to isolate the wireless connection of the wireless client (identified with the MAC address) from LAN.</p>
<i>del</i> <MAC>	<p>It means to delete a MAC address entry defined in the access control list.</p> <p>[MAC] format: xx-xx-xx-xx-xx-xx</p> <p>or xx:xx:xx:xx:xx:xx</p> <p>or xx.xx.xx.xx.xx.xx</p>
<i>mode</i> <ssid1 ssid2 ssid3 ssid4> <white/black>	It means to set white/black list for each SSID.
<i>show</i>	It means to display current status of access control.
<i>showmode</i>	It means to show the mode for each SSID.
<i>clear</i>	It means to clear all of the access control settings.

Example

```

> wl_dual acl showmode
  SSID1: None
  SSID2: None
  SSID3: None
  SSID4: None
> wl_dual acl add 14-49-BC-0A-8A-B8 ssid1 ssid2 isolate
  Set Done !!
> wl_dual acl show
  -----Enable Mac Address Filter-----
  SSID1: Disable SSID2: Disable SSID3: Disable SSID4: Disable
  -----MAC Address Filter-----
  Index   Attribute      MAC Address      Associated SSIDs
    1      s             14:49:bc:0a:8a:b8  SSID1 SSID2

s: Isolate the station from LAN

```

Telnet Command: wl_dual apscan

This command is used to scan Access Point installed near the location of Vigor router.

Syntax

wl_dual apscan start

wl_dual apscan show

Syntax Description

Parameter	Description
<i>start</i>	It means to execute the AP scanning.
<i>show</i>	It means to display the content of the AP list.

Example

```
> wl_dual apscan start
> wl_dual apscan show
  AP scan is ongoing.
> wl_dual apscan ?
% wl_dual apscan [start/show]
% start: do AP scan
% show: show AP list

> wl_dual apscan show
5G Access Point List :
BSSID          Channel  SSID
```

Telnet Command: wl_dual config

This command allows users to configure general settings and security settings for wireless connection (5GHz).

```
wl_dual config enable <value>
wl_dual config enable show
wl_dual config mode <value>
wl_dual config mode show
wl_dual config channel <number>
wl_dual config channel show
wl_dual config preamble <enable>
wl_dual config preamble show
wl_dual config ssid <ssid_num enable ssid_name>
wl_dual config ssid hide <ssid_num enable>
wl_dual config ssid show
wl_dual config ratectl <ssid_num enable upload download>
wl_dual config ratectl show
wl_dual config isolate lan <ssid_num enable>
wl_dual config isolate member <ssid_num enable>
wl_dual config isolate vpn <ssid_num enable>
wl_dual config isolate show
wl_dual config frag <value>
wl_dual config frag show
wl_dual config rts <value>
wl_dual config rts show
wl_dual config country <value>
wl_dual config txpower <value>
wl_dual config nss <value>
```

Syntax Description

Parameter	Description
<i>enable</i> <value>	It means to enable/disable the 5GHz wireless function. 1: enable 0: disable
<i>show</i>	It means to display if 5G wireless function is enabled or not.
<i>mode</i> <value>	It means to select connection mode for wireless connection. Available settings are: "11a", "11n_5g", "11n" and "11an".
<i>mode show</i>	It means to display what the current wireless mode is.
<i>channel</i> <number>	It means the channel of frequency of the wireless LAN. The available settings are: 36, 40, 44, 48, 52, 56, 60, 64, 100, 104, 108, 112, 116, 120, 124, 128, 132, 136 and 140. number=0, means Auto number=36, means Channel 36

	Number=52, means Channel 52.
<i>channel show</i>	It means to display what the current channel is.
<i>preamble <enable></i>	It means to define the length of the sync field in an 802.11 packet. Most modern wireless network uses short preamble with 56 bit sync field instead of long preamble with 128 bit sync field. However, some original 11b wireless network devices only support long preamble. 0: disable to use long preamble. 1: enable to use long preamble.
<i>preamble show</i>	It means to display if preamble is enabled or not.
<i>ssid <ssid_num enable ssid_name></i>	It means to set the name of the SSID, hide the SSID if required. <i>ssid_num</i> : Type 1, 2, 3 or 4 to specify SSID1, SSID2, SSID3 or SSID4. <i>ssid_name</i> : Give a name for the specified SSID.
<i>ssid hide <ssid_num enable></i>	It means to hide the name of the SSID if required. <i>ssid_num</i> : Type 1, 2, 3 or 4 to specify SSID1, SSID2, SSID3 or SSID4. <i>enable</i> : Type 0 to hide the SSID or 1 to display the SSID.
<i>ssid show</i>	It means to display a table of SSID configuration.
<i>ratectl <ssid_num enable upload download></i>	It means to set the rate control for the specified SSID. <i>ssid_num</i> : Choose 1, 2, 3 or 4 to specify SSID1, SSID2, SSID3 or SSID4. <i>enable</i> : It means to enable the function of the rate control for the specified SSID. 0: disable and 1:enable. <i>upload</i> : It means to configure the rate control for data upload. The unit is kbps. <i>download</i> : It means to configure the rate control for data download. The unit is kbps. (example: <i>wl dual config ratectl 1 1 25 25</i>)
<i>ratectl show</i>	It means to display the data transmission rate (upload and download) for SSID1, SSID2, SSID3 and SSID4.
<i>isolate lan <ssid_num enable></i>	It means to isolate the wireless connection from LAN. It can make the wireless clients (stations) with remote-dial and LAN to LAN users not accessing for each other. <i>ssid_num</i> : Choose 1, 2, 3 or 4 to specify SSID1, SSID2, SSID3 or SSID4. <i>enable</i> : It means to enable such function. 0: disable and 1:enable
<i>isolate member <ssid_num enable></i>	It means to isolate the wireless connection from Member. It can make the wireless clients (stations) with the same SSID not accessing for each other. <i>ssid_num</i> : Choose 1, 2, 3 or 4 to specify SSID1, SSID2, SSID3 or SSID4. <i>enable</i> : It means to enable such function. 0: disable and 1:enable.
<i>isolate vpn <ssid_num enable></i>	It means to isolate the wireless connection from VPN. <i>ssid_num</i> : Choose 1, 2, 3 or 4 to specify SSID1, SSID2, SSID3 or SSID4. <i>enable</i> : It means to enable such function. 0: disable and 1:enable.
<i>isolate show</i>	It means to display the status of wireless isolation.
<i>frag <value></i>	It means to set the fragment threshold. value: Enter a number (256 to 2346).
<i>frag show</i>	It means to display current value of fragment threshold.
<i>rts <value></i>	It means to set the RTS threshold. value: Enter a number (1 to 2347).
<i>rts show</i>	It means to display current value of RTS threshold.

<i>country</i> <value>	It means to set the country code. Each country will be represented with two digits. value: Enter two capital letters (e.g., TW, UK, CN..)
<i>txpower</i> <value>	It means to set TX power. Value: Enter a number (1 to 6).
<i>nss</i> <value>	It means to set NSS. Value: Enter a number (0 to 4).

Example

```

> wl_dual config mode 11a
Current mode is 11a
% <Note> Please restart 5G wireless after you set the channel
> wl_dual config channel 60
Current channel is 60
% <Note> Please restart 5G wireless after you set the channel.
> wl_dual config preamble 1
Long preamble is enabled
% <Note> Please restart 5G wireless after you set the parameters.
> wl_dual config ssid 1 enable dray
SSID Enable Hide_SSID Name
1 1 0 dray
% <Note> Please restart 5G wireless after you set the parameters.
> wl_dual config ssid show
SSID Enable Hide_SSID Name
1 1 0 dray
2 0 0 DrayTek_5G_Guest
3 0 0
4 0 0
>

```

Telnet Command: **wl_dual restart**

This command allows you to restart wireless setting (5GHz).

Example

```

> wl_dual restart
5G wireless restart.....

```

Telnet Command: **wl_dual security**

This command allows users to configure security settings for the wireless connection (5GHz).

Syntax

wl_dual security <SSID_NUMBER> <mode> <key> <index>

wl_dual security show

Syntax Description

Parameter	Description
<i>Security</i> <SSID_NUMBER> <mode> <key> <index>	<i>SSID_NUMBER</i> : Type 1, 2, 3 or 4 to specify SSID1, SSID2, SSID3 or SSID4. <i>mode</i> : Available settings are:

	<p>disable: No security.</p> <p>wpa1x: WPA/802.1x Only</p> <p>wpa21x: WPA2/802.1x Only</p> <p>wpamix1x: Mixed (WPA+WPA2/802.1x only)</p> <p>wep1x: WEP/802.1x Only</p> <p>wpa2psk: WPA/PSK</p> <p>wpa2psk: WPA2/PSK</p> <p>wpamixpsk: Mixed (WPA+WPA2)/PSK</p> <p>wep: WEP</p> <p><i>key, index:</i> Moreover, you have to add keys for <i>wpa2psk</i>, <i>wpa2psk</i>, <i>wpamixpsk</i> and <i>wep</i>, and specify index number of schedule profiles to be followed by the wireless connection.</p> <p>WEP keys must be in 5/13 ASCII text string or 10/26 Hexadecimal digit format; WPA keys must be in 8-63 ASCII text string or 64 Hexadecimal digit format.</p>
<i>show</i>	It means to display current mode selection for each SSID.

Example

```

> wl_dual security 1 wpa2psk 123456789e
% <Note> Please restart 5G wireless after you set the parameters.

> wl_dual security show
%% 5G Wireless LAN Security Settings:
% SSID1
%% Mode: WPA2/PSK
% SSID2
%% Mode: Disable
% SSID3
%% Mode: Disable
% SSID4
%% Mode: Disable

```

Telnet Command: wl_dual stalist

This command is used to display the wireless station which accessing Internet via Vigor router.

Syntax

wl_dual stalist

wl_dual stalist num

wl_dual stalist neighbor

wl_dual stalist validtime <time>

wl_dual stalist maxnum <num>

Syntax Description

Parameter	Description
<i>num</i>	Display the wireless station list.
<i>neighbor</i>	Display the number of the wireless stations.
<i>validtime</i> <time>	Set the valid time (0 to 300000) of neighbor station list.

<i>maxnum <num></i>	Set the maximum number (10 to 512) of neighbor station list.
---------------------------	--

Example

```
> wl_dual stalist
5G Wireless Station List :

Index  Status  IP Address      MAC Address      Associated with

Status Codes :
C: Connected, No encryption.
E: Connected, WEP.
P: Connected, WPA.
A: Connected, WPA2.
B: Blocked by Access Control.
N: Connecting.
F: Fail to pass WPA/PSK authentication.
>
```

Telnet Command: wl_dual wds

This command allows users to configure WDS for wireless connection (5GHz).

Syntax

```
wl_dual wds mode <value>
wl_dual wds security <value>
wl_dual wds ap <value>
wl_dual wds hello <value>
wl_dual wds status
wl_dual wds show
wl_dual wds mac add <index addr>
wl_dual wds mac clear/disable/enable <index/all>
wl_dual wds flush
```

Syntax Description

Parameter	Description
<i>mode <value></i>	It means to specify connection mode for WDS. [value]: Available settings are : d: Disable b: Bridge r: Repeater
<i>security <value></i>	It means to configure security mode with encrypted keys for WDS. <i>mode</i> : Available settings are: disable: No security. wep: WEP wpapsk [key]: WPA/PSK wpa2psk [key]: WPA2/PSK <i>key</i> : Moreover, you have to add keys for <i>wpapsk</i> , <i>wpa2psk</i> , and <i>wep</i> , and specify index number of schedule profiles to be followed by the wireless connection. WEP keys must be in 5/13 ASCII text string or 10/26 Hexadecimal

	digit format; WPA keys must be in 8-63 ASCII text string or 64 Hexadecimal digit format. e.g., <i>wl_dual wds security disable</i> <i>wl_dual wds security wep 12345</i> <i>wl_dual wds security wpa2psk 12345678</i>
ap <value>	It means to enable or disable the AP function. Value: 1 - enable the function. 0 - disable the function.
hello <value>	It means to send hello message to remote end (peer). Value: 1 - enable the function. 0 - disable the function.
status	It means to display WDS link status for 5GHz connection.
show	It means to display current WDS settings.
mac add <index addr>	add <index addr> - Add the peer MAC entry in Repeater/Bridge WDS MAC table.
mac clear/disable/enable <index/all>	clear/disable/enable <index/all>- Clear, disable, enable the specified or all MAC entries in Repeater/Bridge WDS MAC table. e.g, <i>wl_dual wds mac enable 1</i>
flush	It means to reset all WDS setting.

Example

```
> wl_dual wds status
Please enable WDS hello function first.

> wl_dual wds hello 1
% <Note> Please restart router after you set the parameters.
> wl_dual wds security wep
% Please configure WEP key set in Security Settings.
% <Note> Please restart router after you set the parameters.
> wl_dual wds show
Mode : Disable
Security : WEP
> wl_dual wds wep 12345
% <Note> Please restart router after you set the parameters.
```

Telnet Command: wl_dual wps

This command allows users to configure WPS for wireless connection (5GHz).

Syntax

wl_dual wps enable <value>

wl dual wps pbc

wl_dual wps pin <code>

wl_dual wps show

Syntax Description

Parameter	Description
<i>enable</i> <value>	It means to enable WPS. 1 - enable

	0 - disable
<i>pbw</i>	It means to start WPS by pressing the WLAN ON/OFF WPS button on Vigor router.
<i>pin <code></i>	It means to start WPS by using client PIN code. code: Client PIN code (digit number).
<i>show</i>	It means to display current WPS settings.

Example

```
> wl_dual wps enable 1
WPS is enabled.
> wl_dual wps pin 88563337
WPS has triggered by PIN code.
The AP will wait for WPS request from your client for 2 minutes...
```

Telnet Command: wl_dual artfns

This command allows users to configure airtime fairness function for wireless (5GHz) connection.

Syntax

`wl_dual artfns enable <value>`

`wl_dual artfns trg_num <value>`

`wl_dual artfns show`

`wl_dual artfns status`

Syntax Description

Parameter	Description
<i>enable <value></i>	It means to enable wireless airtime fairness function. 1 - enable 0 - disable
<i>trg_num <value></i>	Set a threshold when the active station number achieves this number, the airtime fairness function will be applied. Available values will be 2 to 64.
<i>show</i>	Display current status (enable or disable) and triggering client number for airtime fairness function.
<i>status</i>	Display whether the function of airtime fairness is enabled or disabled.

Example

```
> wl_dual artfns show
airtime fairness for 5G: disable
trg_num: 2
> wl_dual artfns status
airtime fairness for 5G is disabled !!!

> wl_dual artfns enable 0
> wl_dual artfns trg_num 2
> wl_dual artfns show
airtime fairness for 5G: disable
```

```
trg_num: 2
> wl_dual artfns status
airtime fairness for 5G is disabled !!!
```

Telnet Command: wl_dual drayrs

This command allows the user to configure settings for Roaming for wireless clients.

Syntax

`wl_dual drayrs set <mode><rs_low><s_low_security><delta>`

`wl_dual drayrs restart`

`wl_dual drayrs show`

Syntax Description

Parameter	Description
<code>Set <mode> <rs_low> <s_low_security> <delta></code>	Select a mode for roaming. 0 - disable 1 - Strictly Minimum RSSI 2 - Minimum RSSI rs_low - Set a value of Strictly Minimum RSSI (62-86). rs_low_security - Set a value of Minimum RSSI (62-86). delta - Set a value of Adjacent AP RSSI (1-20).
<code>restart</code>	Restart to activate roaming function.
<code>show</code>	Dispaly current configuration of roaming function.

Example

```
> wl_dual drayrs show
% Mode : Disable
% rs_low      : -73
% rs_low_secure : -66
% delta      : 5
> wl_dual drayrs set 1 68 66 2
> wl_dual drayrs show
% Mode : Strictly Minimum RSSI
% rs_low      : -68
% rs_low_secure : -66
% delta      : 2
```

Telnet Command: wol

This command allows Administrator to set the white list of WAN IP addresses/Subnets, that the magic packet from these IP addresses/Subnets will be eligible to pass through NAT and wake up the LAN client. You also need to set NAT rule for LAN client.

Syntax

`wol up <MAC Address>`

`wol fromWan <on/off/any>`

`wol fromWan_Setting <idx><ip address><mask>`

Syntax Description

Parameter	Description
-----------	-------------

<MAC Address>	It means the MAC address of the host.
<on/off/any>	<p>It means to enable or disable the function of WOL from WAN.</p> <p>on: enable off: disable</p> <p>any: It means any source IP address can pass through NAT and wake up the LAN client.</p> <p>This command will allow the user to choose whether WoL packets can be passed from the Internet to the LAN network from a specific WAN interface.</p>
<idx><ip address><mask>	<p>It means the index number (from 1 to 4).</p> <p>These commands will allow the user to configure the LAN clients that the user may wake up from the Internet through the use of the WoL packet.</p> <p><i>ip address</i> - It means the WAN IP address. <i>mask</i> - It means the mask of the IP address.</p>

Example

```

> wol fromWan on
% wol fromWan: on
> wol fromWan_Setting 1 192.168.1.45 255.255.255.0
% wol fromWan_Setting 1 192.168.1.45 255.255.255.0
>

```

Telnet Command: user

The command is used to create new user account profiles.

Syntax

user set <-a/-b/-c/-d/-e/-l/-o/-q/-r/-s/-u>

user edit <PROFILE_IDX>

<-a/-d/-e/-f/-i/-o/-m/-n/-p/-q/-r/-s/-t/-u/-v/-w/-x/-A/-H/-T/-P/-I/-L/-D>

user account <USER_NAME><-t/-d/-q/-r/-w>

user setdefault

Syntax Description

Parameter	Description
<i>set</i>	It means to configure general setup for the user management.
<i>edit</i>	It means to modify the selected user profile.
<i>account</i>	It means to set time and data quota for specified user account.
User Set	
<i>-a</i> <Profile idx> <User name><IP_Address>	It means to pass an IP Address. Profile idx- type the index number of the selected profile. User name- type the user name that you want it to pass. IP_Address- type the IP address that you want it to pass.
<i>-b</i> <user name> <i>-b ip</i> <ip address>	Block specifies user or IP address. <i>user name</i> - type the user name that you want to block. <i>ip address</i> -- type the IP address that you want to block.
<i>-c</i> <user name> <i>-c all</i>	Clear the user record. <i>user name</i> - type the user name that you want to get clear corresponding record. <i>all</i> - all of the records will be removed.
<i>-d</i>	Enable the User management in Rule-Based mode.
<i>-e</i>	Enable the User management in User-Based mode.
<i>-l all</i> <i>-l user</i> <i>-l ip</i>	Show online user. <i>all</i> - all of the users will be displayed on the screen. <i>user name</i> - type the user name that you want to view on the screen. <i>ip</i> - type the IP address that you want to view on the screen.
<i>-o</i>	It means to show user account information. e.g., <i>-o</i>
<i>-q</i>	It means to trigger the alert tool to do authentication.
<i>-r</i> <user name all>	Remove the user record. <i>user name</i> - type the name of the user profile. <i>all</i> - all of the user profile settings will be removed.
<i>-s</i> <0/1>	It means to set login service. 0:HTTPS 1:HTTP e.g., <i>-s 1</i>
<i>-u user</i> <user name> <i>-u ip</i> <ip address>	Unblock specifies user or IP address. <i>user name</i> - type the user name that you want to unblock. <i>ip address</i> -- type the IP address that you want to unblock.

<i>User edit</i>	
<i>PROFILE_IDX</i>	Type the index number of the profile that you want to edit.
<i>-a <0/1></i>	Enable(1) or disable(0) the internal RADIUS.
<i>-d</i>	Disable User profile function.
<i>-e</i>	Enable User profile function.
<i>-f <0/1></i>	Enable(1) or disable(0) the local 802.1x user.
<i>-i <0-255></i>	It means to set idle time (from 0 to 255, 0 means unlimited). e.g., <i>-i 60</i>
<i>-o <0-65535></i>	It means to set auto-logout (from 0 to 65535, 0 means unlimited).
<i>-m <0-2000></i>	It means to set the maximum (from 0 to 2000) login user number. e.g., <i>-m 200</i>
<i>-n <param></i>	It means to set a user name for a profile. Param: Enter a string, e.g., <i>-n forttest</i> .
<i>-p <param></i>	It means to configure user password. Param: Enter a string, e.g., <i>-p 60forttest</i> .
<i>-q <param></i>	It means to set time quota (0-65535) of the user profile. Param: Enter a value, e.g., <i>-q 200</i> .
<i>-r <param></i>	It means to set data quota. Param: Enter a value, e.g., <i>-r 1000</i> .
<i>-s <sch_idx1,sch_idx2,sch_idx3 , and sch_idx4></i>	It means to set schedule index. Available settings are" sch_idx1,sch_idx2,sch_idx3, and sch_idx4.
<i>-t <0/1></i>	It means to enable /disable time quota limitation for user profile 0:Disable 1:Enable
<i>-u <0/1></i>	It means to enable /disable data quota limitation for user profile 0:Disable 1:Enable
<i>-v</i>	It means to view user profile(s).
<i>-w <MB/GB></i>	It means to specify the data quota unit (MB/GB). e.g., <i>-w MB</i>
<i>-x <0-3></i>	It means to set external server authentication 0: None 1: LDAP 2: Radius 3: TACAS e.g., <i>-x 2</i>
<i>-l <0-3></i>	It means to set log type. 0:None 1:Login 2:Event 3:All
<i>-P <0/1></i>	It means to enable /disable pop browser tracking window for user profile 0:Disable 1:Enable
<i>-T <0/1></i>	It means to enable /disable authentication by telnet.

	0:Disable 1:Enable
<i>-H <0/1></i>	It means to enable /disable authentication by web page. 0:Disable 1:Enable
<i>-A <0/1></i>	It means to enable /disable authentication by alert tool. 0:Disable 1:Enable
<i>-L <index></i>	It means to set active directory / LDAP profiles. Index: Specify the index number (profile_idx1 to profile_idx8) of the profile.
<i>-D</i>	It means to list all active directory / LDAP profiles.
<i>-O <0/1></i>	It means to reset the quota automatically. 0:Disable 1:Enable
<i>-Q <param></i>	It means to set the default time quota. param: Enter a number (1 to 65535).
<i>-R <param></i>	It means to set the default data quota. param: Enter a number (1 to 65535).
<i>-M <param></i>	It means to set the default quota type. 0: when login permission schedule expired. 1: at the start time of schedule.
<i>I <param></i>	It means to specify the default quota schedule index to perform the job at the start time.
<i>-S</i>	It means to display the reset default quota type and the schedule index.
<i>User account</i>	
<i>USER_NAME</i>	It means to type a name of the user account.
<i>-d<0/1></i>	It means to enable /disable data quota limitation for user account. 0:Disable 1:Enable
<i>-q</i>	It means to set account time quota. e.g., <i>-q 200</i>
<i>-r</i>	It means to set account data quota. e.g., <i>-r 1000</i>
<i>-t <0/1></i>	It means to enable /disable time quota limitation for user account. 0:Disable 1:Enable
<i>-w</i>	It means to set data quota unit (MB/GB).

Example

```
> user account admin -d 1
Enable the [admin] data quota limited
```

Telnet Command: appqos

The command is used to configure QoS for APP.

Syntax

appqos view

appqos enable <0/1>

appqos traceable <-v / -e AP_INDEX CLASS / -d AP_INDEX>

appqos untraceable <[-v / -e AP_INDEX CLASS / -d AP_INDEX>

Syntax Description

Parameter	Description
<i>view</i>	It means to display current status of APP QoS.
<i>enable <0/1></i>	It means to enable or disable the function of APP QoS.
<i>traceable/ untraceable</i>	The APPs are divided into traceable and untraceable based on their properties.
<i>-v</i>	It means to view the content of all traceable APs. Use "appqos traceable -v" to display all of the traceable APS with speficed index number. Use "appqos untraceable -v" to display all of the untraceable APS with speficed index number.
<i>-e</i>	It menas to enable QoS for application(s) and assign QoS class.
<i>AP_INDEX</i>	Each index number represents one application. Index number: 50, 51, 52, 53, 54, 58, 60, 62, 63, 64, 65, 66, 68 are used for 13 traceabel APPs. Index number: 0-49, 55-59, 61, 67, 69, and 70-123 are used for 125 untraceable AP.
<i>CLASS</i>	Specifies the QoS class of the application, from 1 to 4 1:Class 1, 2:Class 2, 3:Class 3, 4:Other Class
<i>-d</i>	It means to disable QoS for application(s).

Example

```
> appqos enable 1

APP QoS set to Enable.
> appqos traceable -e 68 2

TELNET: ENABLED, QoS Class 2.
```

Telnet Command: nand bad /nand usage

“NAND usage” is used to display NAND Flash usage; “nand bad” is used to display NAND Flash bad blocks.

Syntax

nand bad

nand usage

Example

```
>nand usage
Show NAND Flash Usage:
Partition    Total          Used           Available      Usecfg         419
4304         16768          4177536       0bin_web      33554432      181
20754        15433678       54cfg-bak     4194304       16768         417
7536         0bin_web-bak  33554432      18120754     15433678      54
> nand bad
Show NAND Flash Bad Blocks:
Block  Address          Partition
1020   0x07f80000      unused
1021   0x07fa0000      unused
1022   0x07fc0000      unused
1023   0x07fe0000      unused
```

Telnet Command: apm enable/disable/show /clear/discover/query

The apm command(s) is use to display, remove, discover or query the information of VigorAP registered to Vigor2135.

Syntax

apm enable

apm disable

apm show

apm clear

apm discover

apm query

Syntax Description

Parameter	Description
<i>enable</i>	It means to enable APM function.
<i>disable</i>	It means to disable APM function.
<i>clear</i>	It is used to remove all of the APM profile.
<i>discover</i>	It is used to search VigorAP on LAN.
<i>query</i>	It is used to query any VigorAP which has been registered to APM (Central AP Management) in Vigor2135. Information related to the registered AP will be send back to Vigor2135 for updating the web page of Central AP Management.

Example

```
> apm clear ?
Clear all clients ... done
```

Telnet Command: apm profile

This command allows to configure wireless profiles to be used in Central AP Management.

Syntax

apm profile clone <from index> <to index> <new name>

apm profile del <index>

apm profile reset

apm profile summary

apm profile show <profile index>

apm profile apply <profile index> <client index1 index2 .. index5>

Syntax Description

Parameter	Description
<i>clone</i>	It is used to copy the same parameters settings from one profile to another APM profile.
<i>del</i>	It is used to delete a specified APM profile. The default (index #1) should not be deleted.
<i>reset</i>	It is used to reset to factory settings for WLAN profile.
<i>summary</i>	It is used to list all of the APM profiles with required information.
<i>show</i>	It is used to display specified APM profile.
<i>apply</i>	It is used to apply the selected APM profile onto specified VigorAP.
<from index>	Type an index number in this field. It is the original APM profile to be cloned to other APM profile.
<to index>	Type an index number in this file. It is the target profile which will clone the parameters settings from an existed APM profile.
<new name>	Type a name for a new APM profile.
<profile index>	Enter the index number of existed profile.
<i>client index1/2/3/4/5</i>	It is useful for applying the selected APM profile to the specified VigorAP.

Example

```
> apm profile clone 1 2 forcarrie
(Done)

> apm profile summary
# Name          SSID          Security    ACL    RateCtrl(U/D)
- - - - -
0 Default      DrayTek-LAN-A  WPA+WPA2/PSK x    - / -
                DrayTek-LAN-B  WPA+WPA2/PSK x    - / -
1 -            -             -            -      -
```

```

2 forcarrie      DrayTek      Disable      x      - / -
>

```

Telnet Command: apm cache

This command is used to display or remove the information of registered VigorAP, including MAC address, name, and authentication. Up to 30 entries of registered information can be stored and displayed.

Syntax

apm cache <show>

apm cache clear

Syntax Description

Parameter	Description
<i>show</i>	It means to display the information related to VigorAP registered Vigor2135.
<i>clear</i>	It means to remove the information related to VigorAP registered Vigor2135.

Example

```

> apm cache show
MAC          Name          Auth
-----
>

```

Telnet Command: apm lbcfg

This command allows to set parameters related to AP management control.

Syntax

apm lbcfg <set> <value>

apm lbcfg <show>

Syntax Description

Parameter	Description
<set>	It means to set the load balance configuration file for APM.
<i>show</i>	It shows the configuration value.
<value>	You need to type 10 numbers in this field. Each number represents different setting value. [1] - The first number means the load balance function. Type 1 - enable load balance, 0 - disable load balance. [2] - The second number means the station limit function. Type 1 -enable station limit, 0 - disable station limit. [3] - The third number means the traffic limit function. Type 1 - enable traffic limit, 0 - disable traffic limit.

	<p>[4] - The fourth number means the limit number of station. Available range is 3-64.</p> <p>[5] - The fifth number means the upload limit function. Type 1 - enable upload limit, 0 - disable upload limit.</p> <p>[6] - The sixth number means the download limit function. Type 1 - enable download limit, 0 - disable download limit.</p> <p>[7] - The seventh number means disassociation by idle time. Type 1 - enable disassociation, 0 - disable disassociation.</p> <p>[8] - The eighth number means to enable or disable disassociation by signal strength. Type 1 - enable disassociation, 0 - disable disassociation.</p> <p>[9] - The ninth number means to determine the unit of traffic limit (for upload) 1 - Mbps 0 - kbps</p> <p>[10] - The tenth number means to determine the unit of traffic limit (for download) 1 - Mbps 0 - kbps</p> <p>[11] - The 11th number means to set the RSSI threshold (from -200 to -50 dbm).</p>
--	---

Example

```

> apm lbcfg show
apm LoadBalance Config :
1. Enable LoadBalance : 0
2. Enable station limit : 0
3. Enable traffic limit : 0
4. limit Number : 64
5. Upload limit : 0
6. Download limit : 0
7. Enable disassociation by idle time : 0
8. Enable disassociation by Signal strength : 0
9. Traffic limit unit (upload) : 0
10. Traffic limit unit (download) : 0
flag : 0
> apm lbcfg set 1 1 0 15 0 0 0 0 1 1
> apm lbcfg show
apm LoadBalance Config :
1. Enable LoadBalance : 1
2. Enable station limit : 1
3. Enable traffic limit : 0
4. limit Number : 15
5. Upload limit : 0
6. Download limit : 0
7. Enable disassociation by idle time : 0
8. Enable disassociation by Signal strength : 0
9. Traffic limit unit (upload) : 1

```

```
10.Traffic limit unit (download) : 1
flag : 49
```

Telnet Command: apm apsyslog

This command is used to display the AP syslog data coming from VigorAP.

Syntax

apm apsyslog <AP_Index>

Syntax Description

Parameter	Description
<AP_Index>	Specify the index number which represents VigorAP.

Example

```
> apm apsyslog 1
8d 02:46:09 syslog: [APM] Send Rogue AP Detection data.
8d 02:53:04 syslog: [APM] Run AP Detection / Discovery.
8d 02:56:09 syslog: [APM] Send Rogue AP Detection data.
8d 03:00:42 kernel: 60:fa:cd:55:f5:ea had disassociated.
8d 03:03:12 syslog: [APM] Run AP Detection / Discovery.
8d 03:06:09 syslog: [APM] Send Rogue AP Detection data.
8d 03:13:21 syslog: [APM] Run AP Detection / Discovery.
8d 03:16:10 syslog: [APM] Send Rogue AP Detection data.
8d 03:16:41 kernel: 60:fa:cd:55:f5:ea had associated successfully
8d 03:16:55 kernel: 60:fa:cd:55:f5:ea had disassociated.
```

Telnet Command: apm syslog

This command is used to display related syslog data from central AP management.

Syntax

apm syslog

Example

```
> apm syslog
"2015-11-04 12:24:21", "[APM] [VigorAP900_01daa902080] Get Rogue AP Detection
Data from AP"
2015-11-04 12:24:56", "[APM] [VigorAP900_01daa902080] Get Rogue AP Detection
Data from AP Success"
2015-11-04 12:34:21", "[APM] [VigorAP900_01daa902080] Get Rogue AP Detection
Data from AP"
2015-11-04 12:34:57", "[APM] [VigorAP900_01daa902080] Get Rogue AP Detection
Data from AP Success"
```

Telnet Command: apm stanum

This command is used to display the total number of the wireless clients, no matter what mode of wireless connection (2.4G WLAN or 5G WLAN) used by wireless clients to access into Internet through VigorAP.

Syntax

apm stanum <AP_Index>

Syntax Description

Parameter	Description
<AP_Index>	Specify the index number which represents VigorAP.

Example

```
> apm stanum

% Show the APM AP Station Number data.
% apm stanum AP_Index.
%   ex : apm stanum 1
%           Idx  Nearby(2.4/5G)  Conn(2.4/5G)
%           1    2    5             0    0
%           2    2    5             1    0
%           3    2    5             1    0
```

Telnet Command: fw_backupmode

This command is used to backup the firmware to the router. The firmware will be retrieved for rebooting Vigor router after it crashes over three times.

Syntax

backupmode [*<command><parameter>|...*]

Syntax Description

Parameter	Description
[<i><command><parameter> ...]</i>	The available commands with parameters are listed below. [...] means that you can Enter several commands in one line.
-t n	Set the backup time. n : 1 ~ 168 hours
-m n	Set the firmware backup mode. n= 0 or 1. 1: Backup after timeout. 0: Backup after upgrade.
-b	Backup the firmware manually and immediately.
-r n	Set the firmware recovery mode. n= 0 or 1. 1: the firmware will be recovered when the system crash. 0: No recovery.

Example

```
> fw_backupmode -b
Do Firmware backup now!!!.
```

Telnet Command: service

This command is used to display information about Myvigor service. In addition, it allows to transfer MyVigor service from the original account to other account.

Syntax

service -s

service -r

service -l <account><password>

service -i <new_owner><new_owner_email>

service -t <yes>/<no>

service -c

Syntax Description

Parameter	Description
-s	Display the service status.
-r	Refresh the service status
-l <account><password>	Login to MyVigor server. Enter the account and password registered to MyVigor server account - Enter the name of the account. Password - Enter the password of the account.
-i <new_owner> <new_owner_email>	Enter the name and the e-mail address of the new owner for service transfer. New_owner - Enter the account name of the new owner. New_owner_email - Enter the e-mail address of the new owner.
-t <yes>/<no>	Transfer this Vigor device to a new owner.
-c	Clear current owner's account information.

Example

```
> service
> service -l carrieni ttt0016ttt5
Login Account:carrieni, Pw:ttt0016ttt5
Login Success! Please check Service Status again!
> service -s
Show service status.
Now state is [SS_STATE_REG_ACC_VALID]
Service Status:
Model Name   : Vigor2135 Series
Serial Number: 2019053108580701
MAC Address  : 00:1D:AA:73:4A:78
Owner Account: carrieni
E-mail       : ca*****i@draytek.com

Device service support status:
```
