

Product name: ENDORFY Solum Voice S
Product code: EY1B013

ENDORFY Solum Voice S is your new mic for streaming, chatting [and podcasting](#). It takes up very little space to make room for vlogging, dragon hunting or recording podcasts. It also works well with ENDORFY microphone arms, so if you like using body language while chatting, you'll get along in no time.

We've created ENDORFY Solum Voice S with a view of all those who care about good sound pickup and comfortable use. The former is provided by adequately designed and tuned components. The latter – by a mute touch button, GAIN knob and headphone jack output. And thanks to cardioid characteristics our ENDORFY Solum Voice S beautifully captures your voice at the front of the microphone.

Pssst... There's also backlight, because we like RGB.

Size does ~~not~~ matter

Apparently, size doesn't matter. But when it comes to your creative space, every centimeter is of great importance. That's why we've made sure the Solum Voice S charms with small format and compatibility with ENDORFY microphone arms. You're welcome.

It also takes up very little space to fit comfortably even on small desks [and in backpacks](#). On top of that, Solum Voice S has a good surface grip and is compatible with all ENDORFY microphone arms. Simply put – you can set up this bad boy just the way you like it.

We need to talk

When it comes to Solum Voice S, you always need to talk. Either you're recording a podcast, calling your boss or defeating some dragons with besties – you can count on our microphone. Simply put, perfect sound quality on any occasion is our [\(and Solum's\)](#) priority objective.

The Solum Voice S works in cardioid mode. In practice, this means that our microphone picks up sound mainly at the front as if you were in the same room with your interlocutor. In addition, the microphone has a jack output, so – after long hours at the home office – you can plug in headphones and use them as monitor or quickly dive into your favorite music.

Everything at hand [\(literally!\)](#)

If we had to sum up the Solum Voice S in one sentence, we'd say that it has everything you need, and you have it at hand [\(literally!\)](#). Seriously – you can control the sensitivity of the microphone and adjust the sound to get the best quality. Something tells us that your interlocutors will thank you for it (ours did this a long time ago).

Solum Voice S also has two foam filters – an internal one and one applied directly to the microphone (which is UNIQUE, considering its shape!) with a slot for mute touch button, with which you can silently [escape mute yourself](#) during a conversation.

Ready to go talk

It's no secret that we have a thing for backlight, and the colored rim around GAIN knob on the Solum Voice S only confirms this. We gave you several colors to choose from (and conveniently switch) – just click the knob and you're ready to go talk.

Just say it!

Connecting the Solum Voice S is a piece of cake. Our microphone doesn't need any additional software – just plug it into your PC and that's it. You can talk with besties, record podcasts, call your family from across the country... Or do it [all](#) at once, why limit yourself.

You decide.

Connect the microphone in seconds with convenient USB-C cable.

Solum Voice S is also compatible with popular operating systems. Enjoy excellent sound quality whether you're connecting to a PC, PS4 or PS5 console, or a smartphone equipped with USB-C and OTG support.

In practice, the OTG function enables to connect peripherals (such as audio equipment, keyboard, mouse or flash drive) to a mobile device [via USB](#). This function is supported by the vast majority of modern smartphones with a USB-C connector.

ENDORFY Solum Voice S – main features:

- RGB lighting
- Headphone jack
- Tap-to-mute button
- Gain control
- USB Plug & Play
- Cardioid pattern
