HP Counterbalanced Floor-Wall

Item no.: 8223

Stand system with manual height adjustment

The HP Counterbalanced Floor-Wall is a stand system for floor-to-wall assembly with manual height adjustment. The stand system is suitable for screens and whiteboards with a size of 46 - 70 ″ | 117 - 178 cm screen diagonal and an even weight distribution.

The included VESA mount can be equipped up to a maximum of VESA 800 x 600 mm.

The height of the system is infinitely variable, thanks to a mechanism that can be adjusted to the weight of the device. The screen holds - without locking - safely at the desired height. The stroke is 400 mm.

The load capacity can be adapted to the weight of the device and is between a minimum of 40 and a maximum of 60 kg.

The assembly is combined with a screw connection on the wall and on the floor.

The surfaces of the HP Counterbalanced Floor-Wall are finished with an impact- and scratch-resistant powder coating in black.

As an alternative, for larger and heavier screens, the HP Counterbalanced Floor-Wall HD is available.
