

SKILLER SAC20

PBT KEYCAP SET FOR MECHANICAL KEYBOARDS

The SKILLER SAC20 is a set of keycaps developed in cooperation with the keycap specialist, Tai-Hao. With their translucent inscriptions, the keycaps are suitable for illuminated keyboards. Thanks to the use of the polymer material PBT, the keycaps of the SKILLER SAC20 are not subject to abrasion and maintain their original color. Moreover, thanks to the cross mount, and with extra keycaps included, the SKILLER SAC20 is compatible with almost all switches and keyboard sizes. The set also includes a keycap puller tool.

Simply Compatible

The SKILLER SAC20 is available in two versions. These are suitable for 3-block keyboards with either an ANSI layout or an ISO layout. However, thanks to the common cross mount and the ten extra keycaps that are included in the set, they can also be used for smaller keyboard sizes. As an extra bonus, the sets also come with two Sharkoon keycaps and one Tai-Hao keycap.

Robust and Wear-Resistant

The keycaps of the SKILLER SAC20 are made of high-quality PBT, using the double-injection process. This provides a particularly elegant and abrasion-resistant inscription for the keycaps. Compared to traditional ABS keycaps, they are also more resistant to developing a glossy look over time, and they always remain true to their original color.
