

Plug it in, connect - and enjoy!

The fast-approaching IFA fair taking place in Berlin in the beginning of September will see some new Hisense soundbars, delivering excellence, quality and user-friendly features.

In the last few years the soundbars have seen the rise of their popularity due to their quality performance, multi connectivity, easy-to-use and (almost) no cables. Hisense is proudly presenting their new three models, catering to needs of every type of user, from beginners in the Bluetooth technology to those advanced and most demanding.

Strictly speaking, the **HT Saturn** is not an ordinary soundbar with a single bar and a subwoofer. No, it has all the characteristics of a good home-theater with four separate speakers and a subwoofer, except it is completely wireless. Speakers are wirelessly connectable and all the latest technologies are integrated: from Dolby Atmos to DTS:X and Pure Surround tech. With its 720W Max Audio power it will give you the experience of being in the middle of the action of a favourite movie or in front of the stage of your top music artist - except you will be in the comfort of your home or office. Streaming is easy and intuitive and Remote with a Built-in Screen makes sure you are in the command. As its slogan puts it, with HT Saturn theatre Sound Hits Home.

AX5125H model is lifting your home entertainment to whole new level - to immersion. In the recent years its quality was sealed with TechRadar and Expertviews awards, proving its excellence. Its 5.1.2 Channel Sound with Wireless Subwoofer, Dolby Atmos, DTS:X, Hi-Concerto and EzPlay will deliver top quality home entertainment, be it music or movies. Powerful bass will add the profound experience and its 500W Max Audio Power will give you the opportunity to hear every nuance of your favorite music track or action movie. Adding to that, you will be able you to adjust the details thanks to its 7 EQ modes for different scenes. Connecting it easily to your TV, you can use the Bluetooth 5.3 technology or a single HDMI cable.

HS3100 is boosting your TV sound as it presents a TV Sound Booster, improving the more or less plain sound that the various TVs are often emitting. A bar and a subwoofer will enhance the audio experience of every content coming from your TV, from music videos, classic concerts to movies or sports events. With its 480W Max Audio Power it has more than enough power to deliver the expected, with the Dolby Digital Plus and DTS Virtual:X technologies to support it. With TV mode technology, when paired with Hisense TV you can enjoy the full potential of your TV's sound engine through the Soundbar speakers for immersive audio enhancements. Night mode ensures that you'll be able to hear even the quietest dialogue at low volume without spikes of loudness. Sources - TV, tablet, smart phone - can be connected to it via Bluetooth technology while TV can also be connected with a cable.

HS5100 model comes as an upgrade to HS3100, the two differing in the power (HS5100 emits 540W of power) and in the dual rear surround speakers. The latter also supports True 5.1 Multi Channel.

If you haven't yet, perhaps now is the time to ditch those old school HiFi centres with meters and meters of various cables, connections and stuff that you were so proud of in the eighties and nineties. Bluetooth and soundbar era is here - just plug it into the power socket, connect it, sit back and - enjoy! With top TV and sound technology and a Hisense TV+soundbar bundle you are simply getting your best TV mate.
