

Endorfy GEM Plus Onyx White (EY6A011)

The GEM Plus Onyx White will delight you with its looks and agility. From the outside, it's a small work of art – a light (67 g) white housing on PTFE feet, atmospheric ARGB backlighting... But hides heavy-caliber components inside.

Its heart is the state-of-the-art PixArt PAW3370 sensor with a maximum sensitivity of 19,000 DPI. It's able to register and precisely process the movement of the GEM Plus moving even at a speed of 10.16 m/s. You also have super-fast Kailh GM 8.0 switches at your disposal – with such a supersonic package, you'll only ever see your rivals in the rearview mirror.

Of house Onyx White

The GEM Plus Onyx White is part of our unique Onyx White series. Its name refers to the white onyx, a precious mineral famous among connoisseurs for its high strength and unique beauty. The GEM Plus Onyx White is the same – so divinely durable and elegant that you'll want to carry it with you around the city.

Ultra-sensitive PixArt PAW3370 sensor

There's no success (virtual or otherwise) without quick wits and even quicker reactions. For this reason, we made sure that GEM Plus Onyx White responded to your every command in the fraction of a second.

Immodestly we'll say that it copes with it quite well.

The PixArt PAW3370 is so sensitive that it's hard to put into words – it can register the movement of a mouse moving at a speed of 10.16 m/s. That's over 36.5 km/s, that's almost as fast as the best sprinters. After a few hours of clicking, you can say that you had a good workout.

But the high-tech sensor comes with other perks too — it's flexible and adapts to your playstyle. You can fine-tune its Lift-Off distance (1 or 2 mm), polling rate, and even debounce time for that extra edge against your opponents. Imagine the possibilities!

Fast and furious *frivolous*

When someone tells you that hard-looking mice can't be lightweight, show them the GEM Plus Onyx White. It weighs only 67 g and glides across the mousepad at the speed of otaku at the anime premiere of their favorite manga.

GEM Plus Onyx White has PTFE feet that give it minimal resistance. This solution perfectly pairs with various mousepads – including everything from standard to even "control" and "speed" types.

Kailh GM 8.0 microswitches

The GEM Plus Onyx White isn't a chihuahua that you have walk on eggshells around (although it's equally cute). You can smack it with your fingers without worrying about breaking the switches. It withstands even the most determined clickers – we tested it on several shooters.

The Kailh GM 8.0 are not only quick to act but also long-lasting — their lifespan estimated at 80 million clicks means you can click to your heart's delight. If you're

in the market for reliable microswitches that'll last years, then place your bets on the Kailh GM.

We have ARGB and won't hesitate to use it

If you're hunting for great-looking equipment that can instantly spice up your desk, then we've good news– your quest is complete. The GEM Plus Onyx White features an ARGB backlight and won't hesitate to add some moody ambiance to your war room.

With the GEM Plus Onyx White you can backlight the Endorfy logo, the scroll wheel, and even the strip around the back of the housing. Pick your own color or use one of the predefined effects – you can quickly change the whole configuration using the dedicated software.

Long and soft

An unwieldy cable tugging at your mouse in the middle of a scrim is every technology hero's worst nightmare. We've cried over spilt milk [cappuccino](#) countless times, but you don't have to anymore. GEM's long and soft cable is our new MVP.

Our "paracord" cable is more flexible than you'd expect. Its outer sheath of woven fiber has one job only — to protect the cable from damage. It's soft and light like your childhood teddy bear, so it won't interfere with your work. Additionally, it's 1.8 meters long — plenty for the GEM Plus Onyx White to slide freely across the mousepad.

Live [Click](#) as you like

With GEM Plus Onyx White you ~~live~~ [click](#) as you like. Thanks to the dedicated software, you have full control over the mouse and all its perks. Make your own rules — change its sensitivity and LOD, customize the ARGB backlight, and record macros.
