

Alphacool Eisblock Aurora Acetal GPX-A Radeon RX 6800/6900/XT Reference with Backplate

Alphacool article number: 11945

Aquatuning article number: 102075

The Alphacool Eisblock Aurora Acetal GPX-A for the Radeon RX 6800/XT in Reference Layout offers an outstanding cooling performance. The fullcover cooler cools not only the GPU but also all important components such as voltage converters and the graphics memory directly with water.

Eisblock Aurora Acetal GPX-A

- Fullcover water block
- Nickel plated copper cooler

Compatibility

Compatibility	- AMD Radeon RX 6800 - AMD Radeon RX 6800 XT - AMD Radeon RX 6900 XT

Alphacool International GmbH, Marienberger Strasse 1, 38122 Braunschweig Tel: (+49)0531 288 740 Supportmail: info@alphacool.com

Scope of delivery

3 x 8x8x1mm thermal pad	6 x M2x5 screws
1 x 8x66x1mm thermal pad	6 x M2x5 washers
2 x 15x51x1mm thermal pad	6 x M2x11 screws
2 x 15x15x1mm thermal pad	2 x Screw plugs
1 x 8x84x1mm thermal pad	1 x Thermal grease
1 x 8x74x3mm thermal pad	1 x Plug tool
2 x 15x51x3mm thermal pad	
1 x 30x30x3mm thermal pad	
2 x 15x15x3mm thermal pad	
1 x 8x84x3mm thermal pad	

Data cooler

L x W x H	130 x 262,5 x 24,5 mm
Material cooler	Nickle-plated copper
Material cooler top	Acetal
Threads	4 x G1/4"
Thickness cooling fins	0,6 mm

Data backplate

L x W x H	106 x 262,5 x 6 mm
Material	Aluminium
Color	Black

Packaging dimensions 1 unit

L x W x H	17,2 x 35,2 x 4,3 cm
Total weight	1150 g

Other data

Certification	CE, FC, RoHS
EAN	4250197119450
Customs number	84195080900

Article text

The Alphacool Aurora Acryl RADEON RX 6800/6900/XT Eisblock combines style with performance. With experience of over 16 years, Alphacool the ability to create GPU blocks that represent high quality and fantastic performance. This perfectly describes the Aurora Acryl GPX Eisblock

More Performance!

During the development of the Eisblock Aurora RADEON RX 6800/6900/XT graphic card GPU block, we wanted to further increase the performance. The first step was to move the cooler closer to the individual components by reducing the thermal pads to a thickness of 1 mm. Next, we reduced the thickness of the nickel-plated copper block. Instead of 7 mm, it is now only 5.5 mm thick. The water flow inside the cooler has also been optimized. All important components such as the voltage transformers and the memory are now significantly better and more effectively cooled by the water. All this ensures a significant increase in cooling performance.

Copper or Aluminium?

Of course, Alphacool only uses copper for its water coolers. With the Aurora RADEON RX 6800/6900/XT Eisblock, the copper is nickel-plated. Compared to its predecessor models, Alphacool has improved the nickel plating even further, which has considerably increased the acid resistance. This means that the nickel should resist flaking. Why does Alphacool rely on copper instead of aluminium? Simply, copper has almost twice the thermal conductivity of aluminium and is therefore clearly the better material for water cooling.

Is There Anything Else New?

The Eisblock Aurora RADEON RX 6800/6900/XT also relies on the new patented stop fittings, which sit flush with the surface of the terminal. The Alphacool logo now sits in the corner on the top. On the front of the terminal you can see the corresponding names of the compatible graphic card types. IN and OUT are now marked by small triangles. They are easily recognizable and fit perfectly into the entire aesthetics of the graphic card water cooler.

The Alphacool Aurora RADEON RX 6800/6900/XT Acryl is a complete redevelopment of the previous Alphacool graphics card water coolers. No technical compromises were made, but the entire technical know-how flowed into the development and implementation.
