# User's Guide

Revision 1.1

The information in this User's Manual has been carefully reviewed and is believed to be accurate. The vendor assumes no responsibility for any inaccuracies that may be contained in this document, makes no commitment to update or to keep current the information in this manual, or to notify any person or organization of the updates. **Please Note: For the most up-to-date version of this manual, please see our web site at www.supermicro.com.** 

Super Micro Computer, Inc. ("Supermicro") reserves the right to make changes to the product described in this manual at any time and without notice. This product, including software and documentation, is the property of Supermicro and/or its licensors, and is supplied only under a license. Any use or reproduction of this product is not allowed, except as expressly permitted by the terms of said license.

IN NO EVENT WILL SUPER MICRO COMPUTER, INC. BE LIABLE FOR DIRECT, INDIRECT, SPECIAL, INCIDENTAL, SPECULATIVE OR CONSEQUENTIAL DAMAGES ARISING FROM THE USE OR INABILITY TO USE THIS PRODUCT OR DOCUMENTATION, EVEN IF ADVISED OF THE POSSIBILITY OF SUCH DAMAGES. IN PARTICULAR, SUPER MICRO COMPUTER, INC. SHALL NOT HAVE LIABILITY FOR ANY HARDWARE, SOFTWARE, OR DATA STORED OR USED WITH THE PRODUCT, INCLUDING THE COSTS OF REPAIRING, REPLACING, INTEGRATING, INSTALLING OR RECOVERING SUCH HARDWARE, SOFTWARE, OR DATA.

Any disputes arising between manufacturer and customer shall be governed by the laws of Santa Clara County in the State of California, USA. The State of California, County of Santa Clara shall be the exclusive venue for the resolution of any such disputes. Supermicro's total liability for all claims will not exceed the price paid for the hardware product.

FCC Statement: Refer to Supermicro's web site for FCC Compliance Information.

<u>California Best Management Practices Regulations for Perchlorate Materials</u>: This Perchlorate warning applies only to products containing CR (Manganese Dioxide) Lithium coin cells. "Perchlorate Material-special handling may apply. See www.dtsc.ca.gov/hazardouswaste/perchlorate".

<u>WARNING</u>: Handling of lead solder materials used in this product may expose you to lead, a chemical known to the State of California to cause birth defects and other reproductive harm.

Appendix A and Appendix B included in this user's guide are used with permission from AMI. AMI is the legal owner of these documents. Supermicro has not verified the accuracy of the contents and assumes no responsibility with regard to any errors or omissions in these documents.

## Preface

## About this User's Guide

This user guide is written for system integrators, PC technicians and knowledgeable PC users who intend to configure the IPMI settings supported by the Nuvoton WPCM450 BMC Controller embedded in Supermicro's motherboards. It provides detailed information on how to configure the IPMI settings provided by the Nuvoton WPCM450 chip.

**Note**: Nuvoton Technology is a subsidiary of Winbond Corp.

## **User's Guide Organization**

**Chapter 1** provides an overview on the Nuvoton WPCM450 Controller chip. It also introduces the IPMI, its features and functionality.

**Chapter 2** provides detailed instructions on how to configure the IPMI settings supported by the embedded WPCM450 Controller.

Chapter 3 provides the answers to frequently asked questions.

## **Conventions Used in the User's Guide**

Special attention should be given to the following symbols for proper installation and to prevent damage done to the components or injury to yourself.

**Warning:** Important information given to prevent erroneous RAID configuration and to ensure proper system setup.

**Note:** Additional Information given to ensure correct RAID configuration setup.

# Chapter 1

# Introduction

## 1-1 An Overview of the WPCM 450 BMC Controller

The Nuvoton WPCM450 Controller, a Baseboard Management Controller (BMC), supports 2D/VGA-compatible Graphics Core with PCI interface, creating multi-media virtualization by using Keyboard/Video/Mouse Redirection (KVMR) modules. The WPCM450 Controller is ideal for server management platforms.

The WPCM450 interfaces with the host system via a PCI interface to communicate with the Graphics core. It supports USB 2.0 and 1.1 for remote keyboard/mouse/ virtual media emulation. It also provides LPC interface to control Super IO functions. The WPCM450 is connected to the network via an external Ethernet PHY module or shared NCSI connections.

The WPCM450 communicates with onboard components via six SMBus interfaces, PECI (Platform Environment Control Interface) buses, and General Purpose I/O ports.

## WPCM450 DDR2 Memory Interface

The WPCM450 supports a 16-bit DDR2 memory module with a speed of up to 220 MHz. The motherboard supports 128 MB of shared memory between the BMC and onboard graphics card. For best signal integrity, the WPCM450 provides point-to-point connection.

## WPCM450 PCI System Interface

The WPCM450 provides 32-bit, 33 MHz 3.3V PCI interface, which is compliant with the PCI Local Bus Specification Rev. 2.3. The PCI system interface connects to the onboard PCI Bridge used by the graphics controller.

## Other Features Supported by the WPCM BMC Controller

The WPCM450 supports the following features.

- IPMI 2.0
- Serial over LAN
- KVM over LAN

- LAN Alerting-SNMP Trap
- Event Log
- X-Bus parallel interface for I/O expansion
- Multiple ADC inputs, Analog and Digital Video outputs
- Two serial ports (optional)
- DDR2 SDRAM memory for frame-buffer, firmware support and data storage
- SPI Flash Host BIOS and firmware bootstrap program supported
- Reduced Media Independent Interface (RMII)
- OS (Operating System) Independency
- Provides remote Hardware Health Monitoring via IPMI. Key features include the following:
  - Temperature monitoring
  - Fan speed monitoring
  - Voltage monitoring
  - Power status monitoring, chassis intrusion monitoring
  - Remote power control to power-on, power-off or reboot a system
  - Remote access to text-based, graphic-based system information, including BIOS configurations and OS operation information (KVM)
  - Remote management of utility/software applications
- Provides Network Management Security via remote access/console redirection. Key features include:
  - User authentication enhancement
  - Encryption support enhancement, allowing for password configuration security to protect sensitive data transferring via Serial over LAN
- Supports the following Management tools: IPMIView, CLI (Command Line Interface)
- RMCP+ protocol supported

## 1-2 WPCM450 Block Diagram

The following diagram represents a typical system setup for the WPCM450 Controller.

# **1-3** A Brief Introduction to the IPMI

The Intelligent Platform Management Interface (IPMI) Specification defines a set of common interfaces to a computer system that provides remote access to multiple users from different locations for networking. It also allows a system administrator to monitor system health and to manage computer events remotely.

IPMI operates independently of the operating system. When used in conjunction with the IPMIView, which is an IPMI-compliant management application software loaded into a PC, the WPCM450 BMC Controller provides serial link connections between the South Bridge and other onboard system components, allowing for network interfacing via remote access. With the WPCM450 Controller and the IPMIView software built in, the Supermicro motherboard allows an administrator to access, monitor, diagnose and manage a computer system from a remote site. It also provides remote access to multiple users from different locations for system maintenance and network management.

## **1-4 Motherboards Supported**

This version of Embedded BMC/IPMI is supported by the motherboards listed in the table below. If your motherboard is not included in the table, please refer to the motherboard product page on our web site @www.supermicro.com and download the right BMC/IPMI user's guide for your motherboard.

Intel UP Motherboards supported	Intel DP Motherboards supported	AMD Motherboards supported
X7SB3-F	X7DCT-3F	H8DMT-F
X8ST3-F	X7DCT-3IBXF	H8DMT-IBXF
X8STi-F	X7DCT-LF	
X8STi-3F	X8DAH+-F	
	X8DT3-F	
	X8DT3-LN4F	
	X8DTH-6F	
	X8DTH-iF	
	X8DTi-F	
	X8DTi-LN4F	
	X8DTT-F	
	X8DTT-IBQF	
	X8DTT-IBXF	
	X8DTU-F	

## **1-5** An Important Note to the User

The graphics shown in this user's guide were based on the latest information available at the time of publishing of this guide. The IPMI screens shown on your computer may or may not look exactly like the screen shown in this user's guide.

## **Chapter 2**

# **Configuring the BMC IPMI Settings**

With the Nuvoton WPCM450 BMC Controller chip built in, the Supermicro motherboard allows the user to access, monitor, manage and interface with systems in remote locations. The necessary utilities for accessing and configuring the IPMI settings are included on the bootable CDs that came with your motherboard. This section provides detailed information on how to configure the IPMI settings.

## 2-1 Configuring the IP/MAC Addresses

**Note**: The DHCP (Dynamic Host Configuration Protocol) is on by default. To change the manufacturer default setting, please use the ipmicfg utility or the BIOS firmware.

## To Set the IP/MAC Addresses Using the IPMICFG Utility

- 1. Run the ipmicfg utility from the bootable CD that came with your shipment.
- Follow the instructions given in the Readme.txt file to configure Gateway IP/ Netmask IP addresses, to enable/disable DHCP and to configure other IPMI settings.

IPMICFG Version 1.10 (Build 080711) Copyright 2008 Super Micro Computer, Inc. Usage: IPMICFG Parameters (Example: IPMICFG -m 192.168.1.123)

-m	Shows IP and MAC
-m IP	Sets IP (format: ###.###.####)
-a MAC	Sets MAC (format: ##:##:##:##:##:##)
-k	Shows Subnet Mask
-k Mask	Sets Subnet Mask (format: ###.###.###.###)
-dhcp	Gets the DHCP status
-dhcp on	Enables the DHCP
-dhcp off	Disables the DHCP
-g	Shows Gateway IP
-g IP	Sets Gateway IP (format: ###.###.###.###)
-r	BMC color reset
-garp on	Enables the Gratuitous ARP
-garp off	Disables the Gratuitous ARP

-fd	Resets to the factory defaults
-ver	Gets the firmware revision
-vlan	Gets VLAN status
-vlan on (VLANtag)	Enables the VLAN and sets the VLAN tag (If VLAN tag is not given, it uses previously saved value.)
-vlan off	Disables the VLAN
-raw	Sends a RAW IPMI request and print the re- sponse. Format: NetFn LUN Cmd [Data1Data]

## To set the IP/MAC Addresses Using the AMI BIOS Settings

- 1. Go to the AMIBIOS utility by pressing <Del> at bootup.
- 2. Select IPMI from the Advanced Menu.
- 3. Select LAN Configuration from the IPMI submenu.
- Click <IP Address Source>. Select Static and press <Enter>. The onboard BIOS utility will automatically set the IP Address, MAC Address, Gateway, and Subnet Mask.
- Once the IP, MAC Addresses, Gateway and Subnet Mask are set, click <Update LAN Settings>. Select Yes and press <Enter> to update the IPMI LAN settings.
- 6. Go to the Exit menu. Select Save Changes & Exit and press <Enter> to save changes and exit the BIOS.

## Accessing the BMC

- 1. Connect a LAN cable to the onboard LAN1 port or the dedicated IPMI LAN port.
- 2. Choose a computer connected to the same network and open the IPMIView utility.
- 3. Go to File>New>System. Enter System Name, IP Address of LAN1 or the dedicated LAN, Description in the appropriate fields and press <Enter>.
- 4. Select the system from the IPMI Domain. Enter the Login ID and Password in the appropriate fields to login to the IPMIView utility.

## **Using the Internet Browser**

- 1. Connect a LAN cable to the onboard LAN1 port or the dedicated IPMI LAN port.
- 2. Choose a computer that is connected to the same network and open the browser.
- 3. Enter the IP address of each server that you want to connect to in the address bar in your browser.
- 4. Once your machine is connected to the remote server, the Log-In screen as shown on the next page will display.

## Notes:

1. If you wish to use the IPMI-dedicated LAN port for your network connections, be sure to connect an RJ45 cable to your dedicated LAN port before you activate the BMC (at first power-on or cold reset). Otherwise, the BMC will look for a shared LAN port to connect to if the IPMI-dedicated LAN cable is not detected upon BMC activation.

2. However, if you should decide to use the IPMI-dedicated LAN port for a network connection, please perform a BMC cold reset or power cycle reset for the dedicated LAN to be detected.

## 2-2 Using IE\* to Access the BMC/IPMI Settings from Your Computer

## 2.2.1 To Log In

JOI ERMICK			
	Please Login		
	Sesson timed out. Please log in agen.		
	Password ++++		
	Logn		
		🕒 Dräsrnat	100% -

Once you are connected to the remote server, the following screen will display.

- 1. Enter your Username.
- 2. Enter your Password and click <Login>.
- 3. The Home Page will display on the next page.

**Note 1**: To use the IPMIView Utility to access BMC/IPMI settings, refer to the IPMIView User's Guide for instructions.

**Note 2**: The manufacturer default username and password are ADMIN. Once you have logged into the BMC using the manufacturer default password, be sure to change your password for system security.

## 2.2.2 IPMI Main Page

Once you are logged into the IPMI utility, the IPMI Main page will display.

_	SUPERMI	CR•°	Host Identification Server: SMC003048C8A50 User: ADMIN	6 ( 172.31.1.185 ) (Administrator)		
1	System Information   Ser	ver Health   Configuration   Remote Co	ontrol   Maintenance   Misc	ellaneous   Language		
	<ul> <li>Million 444-4</li> </ul>	This section contains general information	about the system.			2

The IPMI screen contains the following three sections:

- The Submenu Bar (Top)
- The Options Window (Left)
- The Main Display area (Center)

## 1. Submenu Bar

The submenu bar on the top lists the following submenus:

	Submenu Bar
System Information	This submenu displays system information.
Server Health	This submenu displays server health monitoring status.
Configuration	This submenu allows the user to configure the IPMI settings.
Remote Control	This submenu allows the user to launch KVM Console and perform power control & management.
Maintenance	This submenu allows the user to update the firmware and reset the unit.
Miscellaneous	This submenu allows the user to post snooping codes and to launch the SOL console.
Language	This submenu allows the user to select a language setting. (Currently, only English is available.)
? Help	Click this item to find an answer when you have a question.

## 2. The Options window

The Options window on the left side allows the user to quickly navigate through different submenu options.

	Options window
Submenu Name (System Information)	Click this item to display and configure a submenu items.
Refresh Page	Click this icon to refresh the page.
Logout	Click this icon to logout from the IPMI utility.

## 3. The Main Display Area

This area displays the items included in a submenu.

The following items are included in the System Information submenu.

- Firmware Revision: This item displays the current firmware revision number.
- Firmware Build Time: This item displays the time and the date when this version of firmware was built.
- System MAC Address 1: This item displays the MAC address of the first system that is connected to IPMI.
- System MAC Address 2: This item displays the MAC address of the second system that is connected to IPMI.

## 2.3 Server Health

This feature allows the user to set Server Health Settings. Click <Server Health> to display the following submenu.

SUPERM	ICR•°	Host Identification Server: SMC003048C8A506 ( 172.31.1.185 ) User: ADMIN ( Administrator )

- 1. Alerts: Click this item to add, to modify, to delete or to define the setting of an alert.
- 2. Alert#: This item lists Alert item numbers.
- 3. Alert Level: This item indicates the alert level for each alert.
- 4. Destination Address: This item indicates the target address of an alert.
- 5. Modify: Click this icon to configure or modify a selected alert.
- 6. **Send Test Alert:** Click this item to send a configured alert to its destination (the target address) for testing.
- 7. Delete: Click this item to delete an alert.

#### Modifying Alerts

When you select an item and click <Modify>, the Modify Alert submenu will display as shown below.

	Configuration Use here paper to control	ne var haar selferger, saart var gevele, varert, er varbevole	
Cpdors Catagone	Modify Adert International Contra Additing Cases Source: The Modify P That Solitows See Cancel	and taken yang pesat. Ban Denga Teng R Danata Ad R Peri Goligania	

To modify an alert, enter the information needed for the following items:

- Alert Type: This item allows you to specify the alert type. You can select SNMP Type or Email from the pop-up menu.
- Event Severity: This item allows you to decide how to classify or label an alert according to the seriousness of the alert. You can choose an item from the popup menu to categorize the alert: Disable All, Informational, Warning, Critical or Non-recoverable.
- Destination IP: This item allows you to specify the IP address of the server you want to send your alert to.
- Email Address: This item allows you to specify the e-mail address that you want to send your alert to.

After entering the information in the fields, press <Save> to save the information you've entered or press <Cancel> to cancel it.

**Note:** To set up an email alert, please enter the IP address of your mail server in the SMTP (Simple Mail Transfer Protocol.)

## 2.4.2 Configuration - Time and Date Settings

This feature allows the user to configure time and date settings for the host server and client computer. When you click <Time and Date> in the Options window, the following screen will display.

	SUPERMI	CRO		Host Identification Server: SMC003048C8A506 User: ADMIN	( 172.31.1.185 ) (Administrator )

- 2. Modifier Key: Click a button to select the soft keyboard mode.
- Combination: Click the button to use a special key combination as a single key.
- Single Key
- Lock: Click this button to lock the key combination you've created.

### 2.5.1.3 Remote Console - Mouse

This feature allows you to configure the mouse settings for your remote console. To configure the mouse settings, follow the instructions below.

Click <Mouse> in the menu bar, select an item from the pull-down submenu as shown below.

- 1. Synchronize Mouse Cursor Alt+M: Click this item (or press <Alt> and <M> keys simultaneously) to synchronize your local mouse cursor and the mouse cursor of your remote console.
- 2. Show Cursor: Click this item to display the cursor on the screen.

## 2.5.1.4 Remote Console - Media

This feature allows you to configure media virtualization settings for your remote console.

- 1. Click <Media> in the Menu bar to invoke the Media page as shown above.
- 2. Virtual Media Wizard: click this item to launch the Virtual Media Wizard, which allows you to configure Virtual Media settings as shown on the next page.

#### Virtual Media

- 1. Floppy/USB Key Media: This item allows the user to configure the Floppy/ USB Key Media settings. The sub-items include the following.
- Floppy Image
- A (Disk Drive A of the remote console)
- Browse: Click Browse to select the location of the Floppy ISO image.
- Connect Floppy: After selecting the Virtual Media for your Remote Console, click <Connect Floppy> to connect to the remote console via the Floppy drive you chose.
- 3. CD Media: This item allows the user to configure CD Media settings. The sub-items include the following.
- ISO Image
- <Drive letter> (CD/DVD Drive)
- Browse: Click <Browse> to select the location of the CD/DVD ISO image.
- Connect CD/DVD: After selecting the Virtual Media for your Remote Console, click <Connect CD/DVD> to connect to the remote console via the CD/DVD you chose.
- 5. Status: This window displays the status of the target drive of the remote console.

## 2.5.3 Remote Control-Launch SOL

This feature allows you to launch the remote console by using Serial\_over\_LAN. Follow the instructions below to launch SOL.

SUPERM	IICR•°	Host Identification Server: SAC00304C6A696 ( 172.31.1.185 ) User: ADMRN ( Administrator )

- 1. Security Warning: Once you've launched SOL, a security warning will appear, indicating that the application's digital signature cannot be verified
- 2. Always trust content from this publisher: Click this item to give full access to this program, eliminating further security warnings.
- 3. Click <Run> to continue launching SOL. If you continue with SOL launching, the following screen will appear.

- 4. Click <Baud Rate> to invoke the submenu, which will allow you to select the Baud Rate for serial line transfer.
- Baud Rate (bps): You can select a Baud rate from the list as your SOL transfer rate. The options are: 9600 bps (bit-per-second), 19200 bps, 38400 bps, 57600 bps, 115200 bps, and default. Make sure that the Baud Rate selected here matches the Baud Rate set in the BIOS. Then, click <Start> to start the session or press <Stop> to abort the SOL session.

## 2.5.3 Server Power Control

This feature allows you to configure power management settings for your remote console. To configure Server Power Control settings, follow the instructions below.

- Click <Remote Control> in the Menu bar to invoke the Remote Control Main Page.
- 2. Click <Server Power Control> to display the Power Control submenu as shown above.
- 3. Power Control and Status: This submenu indicates the status and the current power control settings of the remote server. The status of the remote server are displayed as below:
- Reset Server: Click this radio button to reset the power control settings for the remote server.
- Power Off Server Immediately: Click this radio button to immediately power off the remote server.
- Power Off Server Orderly Shutdown: Click this radio button to power off and shut down the remote server in an orderly manner.
- Power On Server: Click this radio button to power on the remote server.
- Power Cycle Server: Click this radio button to power cycle the remote server.

4. Perform Action: After selecting a power setting from the list above, click this item to execute the command and perform the action.

## 2.6 Maintenance

Use this feature to manage and configure IPMI devices. Follow the instructions below to configure Maintenance settings.

SUPERMI		8A506 ( 172.31.1.185 ) ( Administrator )	
System Information Ser	ver Health   Configuration   Remote Control Haintenance	Hiscellaneous   Language

- 1. Click <Maintenance> in the Menu bar to display the Maintenance page.
- 2. Click <Firmware Update> to update the BMC firmware (the BIOS) of the remote server. The Firmware Update screen is shown in the next section.
- 3. You can also press <Unit Reset> to reboot the BMC (IPMI) Controller.

## 2.6.1 Maintenance - Firmware Update

When you click <Maintenance> in the Menu bar, the Maintenance Main page will display as below.

#### **Firmware Update**

Enter Update Mode: Click this item to enter the update mode.

Warning: Once you've entered the firmware update mode, the device will be reset even if you cancel the process of firmware updating.

## / Notes:

1. When updating firmware, you are given the option to "Preserve Configuration." Uncheck this option to load the factory default settings, and all the configuration settings will be lost.

2. If you are using the Static IP mode, <u>it is not recommended to uncheck</u> "Preserve Configuration," since it will reset the network settings to the DHCP (Dynamic Host Configuration Protocol) mode.

## 2.7 Miscellaneous

This feature allows the user to perform network activities. Click <Miscellaneous> in the Menu bar to display the Miscellaneous page.

#### Language Settings

- 1. Click <Language> in the Menu bar to display the Language page as shown above.
- 2. From the Available Languages submenu select a language setting for your remote console. (Currently, English is the language available for this utility.)

# Chapter 3

# **Frequently Asked Questions**

## **3-1** Frequently Asked Questions

#### A. Questions: How do I flash the IPMI firmware?

#### Answer:

- 1. Log in the IPMIcfg utility by entering the system IP address.
- 2. Click the <Maintenance> button. Browse the files to select a correct file to flash the firmware.
- 3. Click the <Update Firmware> button to proceed with firmware flashing.

# B. Questions: How do I set up the IP address and MAC address for remote access?

#### Answer:

- 1. Boot the system into DOS.
- 2. Run the utility-IPMICFG from DOS.
- 3. Follow the prompts to set up the IP address and MAC address for remote access.

You can also go to the BIOS to configure the IP address.

## Notes

# Appendix A

# Flash Tools

## A-1 Overview

This chapter provides instructions on how to use AMI Flash Tools. The Flash Tools allow the user to use Command\_Line (CL) utility programs to upgrade or update firmware via different channels such as KCS, USB and LAN connections. We are going to focus on the following tools in this manual.

- 1. YAFUFlash
- 2. YAFUKCS
- YAFUFlash

YAFUFlash (<u>Yet Another Firmware Upgrade Flash</u>) allows the user to flash the BMC in both Linux and Windows environments via network or USB connections. You can choose to use network connections or USB connections to flash the BMC based on how you use the flash tools.

• YAFUKCS

YAFUKCS (<u>Yet Another Firmware Upgrade Keyboard Controller Style</u>) is used to flash the firmware in the DOS environment via the KCS (Keyboard\_Controller\_Style) interface.

# A-2 Flashing the BMC Firmware in the DOS Environment

YAFUKCS is the tool used to flash the BMC firmware in DOS through the KCS interface. To flash the BMC, follow the instructions below:

- 1. Copy yafukcs.exe into your DOS machine.
- 2. Run the yafukcs utility.
- 3. Use the settings as listed below.

• Format:

## Yafukcs [OPTION] [FW\_IMAGE\_FILE]

#### [OPTIONS]

Options Commands		
-info	This option displays information regarding existing and current firmware.	
-auto	This option allows for automatic upgrades by comparing flash module headers.	
-full	This options allows for full upgrades.	
-force-boot	Select this option to force the boot loader to be upgraded during full upgrade. The boot loader is "preserved" by default.	
-C	This option preserves configuration modules during full upgrade.	

#### [FW\_IMAGE\_FILE]

The firmware-image file name is [rom.ima].

## Examples

• Example 1

#### /Yafukcs -info rom.ima

<u>Description</u>: This command displays the details of both existing and new firm-ware.

• Example 2

#### /Yafukcs -full rom.ima

Description: This command starts flashing the new rom.ima to the firmware.

• Example 3

#### /Yafukcs -full -force-boot rom.ima

<u>Description</u>: This command starts flashing the new rom.ima to the firmware using "FORCE BootLoader upgrade."

# A-3 Flashing the BMC Firmware in the Windows Environment

YAFUFlash is used to flash the BMC firmware in Windows through USB or Network connections. To flash the BMC in Windows, follow the instructions below.

- 1. Open Command Prompt. Go to YafuFlash\Windows\path.
- 2. The following two files will be displayed:

- Yafuflash.exe
- LIBIPMI.dll
- 3. Run "Yafuflash.exe" in the command prompt.
- 4. Use the settings as listed below.
- Format:

#### Yafuflash [OPTION] [MEDIUM] [FW\_IMAGE\_FILE]

#### [OPTIONS]

Options Commands	
-info	This option displays information regarding existing and new firmware.
-auto	This option allows for automatic upgrades by comparing flash module headers.
-full	This options allows for full upgrades.
-force-boot	Select this option to force the boot loader to be upgraded during full upgrade. The boot loader is "preserved" by default.
-C	This option preserves configuration modules during full upgrade.

#### [MEDIUM]

Medium Options	
-cd	Select this option to use USB connections.
-nw & ip	Select this option to use network with -ip (followed by the IP address).

#### [FW\_IMAGE\_FILE]

The firmware-image file name is [rom.ima].

#### Examples

Using Network as a Medium

• Example 1

Yafuflash -nw -ip 155.166.132.12 -info rom.ima

<u>Description</u>: This command displays the details of both existing and new firmware using the network connection with the ip address of 155.166.132.12.

• Example 2

Yafuflash -nw -ip 155.166.132.12 -full rom.ima

<u>Description</u>: This command starts flashing the new rom.ima to the firmware using the network connection with the IP address of 155.166.132.12.

#### • Example 3

Yafuflash -nw -ip 155.166.132.12 -full -force-boot rom.ima

<u>Description</u>: This command starts flashing the new rom.ima to the firmware with FORCE BootLoader Upgrade via the network connection using the IP address of 155.166.132.12.

Using USB as a Medium

• Example 1

Yafuflash -cd -info rom.ima

<u>Description</u>: This command displays the details of both existing and new firmware using a USB connection.

• Example 2

#### Yafuflash -cd -full rom.ima

<u>Description</u>: This command starts flashing the new rom.ima to the firmware using a USB connection.

• Example 3

#### Yafuflash -cd -full -force-boot rom.ima

<u>Description</u>: This command starts flashing the new rom.ima to the firmware with FORCE BootLoader Upgrade using a USB connection.

# A-4 Flashing the BMC Firmware in the Linux Environment

YAFUFlash is used to flash the BMC firmware in the Linux environment using network or USB connections. To flash the BMC in Linux, follow the instructions below.

- 1. Open the Terminal. Go to YafuFlash/Linux path.
- 2. The file libipmi.so 1 should be accessible to a Linux system. Usually when running an application, Linux will search for a file in dependent libraries in default locations, such as usr/lib/lib folders.
- 3. Copy libipmi.so.1 to /lib or /usr/lib. Run "1dconfig"
  - or

Copy libipmi.so.1 to a folder and issue the following command:

#LD\_LIBRARY\_PATH=<location\_of\_libipmi\_so>/Yafuflash

**Note**: You may have to create a link to libipmi.so.1.0 (In-sf libipmi.so.1.0 libipmi.so.1).

- 4. Run "Yafuflash.exe" in the terminal.
- 5. Use the settings as listed below.
- Format:

/Yafuflash [OPTION] [MEDIUM] [FW\_IMAGE\_FILE]

#### [OPTIONS

Options Commands	
-info	This option displays information regarding existing and new firmware.
-auto	This option allows for automatic upgrades by comparing flash module headers.
-full	This options allows for full upgrades.
-force-boot	Select this option to force the boot loader to be upgraded during full upgrade. The boot loader is "preserved" by default.
-C	This option preserves configuration modules during full upgrade.

#### [MEDIUM]

Medium Options	
-cd	Select this option to use USB connections.
-nw & ip	Select this option to use network with -ip (followed by the IP address).

### [FW\_IMAGE\_FILE]

The firmware-image file name is [rom.ima].

## Examples

Using Network as a Medium

• Example 1

/Yafuflash -nw -ip 155.166.132.12 -info rom.ima

<u>Description</u>: This command displays the details of both existing and new firmware using the network connection with the IP address of 155.166.132.12.

## • Example 2

#### /Yafuflash -nw -ip 155.166.132.12 -full rom.ima

<u>Description</u>: This command starts flashing the new rom.ima to the firmware using the network connection with the IP address of 155.166.132.12.

• Example 3

## /Yafuflash -nw -ip 155.166.132.12 -full -force-boot rom.ima

<u>Description</u>: This command starts flashing the new rom.ima to the firmware with FORCE BootLoader Upgrade via the network connection using the IP address of 155.166.132.12.

## Using USB as a Medium

## • Example 1

## /Yafuflash -cd -info rom.ima

<u>Description</u>: This command displays the details of both existing and new firmware using a USB connection.

• Example 2

## /Yafuflash -cd -full rom.ima

<u>Description</u>: This command starts flashing the new rom.ima to the firmware using a USB connection.

• Example 3

## /Yafuflash -cd -full -force-boot rom.ima

<u>Description</u>: This command starts flashing the new rom.ima to the firmware with FORCE BootLoader Upgrade using a USB connection.

## A-5 Firmware Recovery

If the firmware upgrade is interrupted during firmware flashing, please follow the steps listed below for firmware recovery using Yafukcs.

- 1. Power off the system by disconnect the power cord.
- 2. Boot to DOS and flash the firmware using Yafukcs.

# Notes

(Disclaimer Continued)

The products sold by Supermicro are not intended for and will not be used in life support systems, medical equipment, nuclear facilities or systems, aircraft, aircraft devices, aircraft/emergency communication devices or other critical systems whose failure to perform be reasonably expected to result in significant injury or loss of life or catastrophic property damage. Accordingly, Supermicro disclaims any and all liability, and should buyer use or sell such products for use in such ultra-hazardous applications, it does so entirely at its own risk. Furthermore, buyer agrees to fully indemnify, defend and hold Supermicro harmless for and against any and all claims, demands, actions, litigation, and proceedings of any kind arising out of or related to such ultra-hazardous use or sale.
