catena A08

The special chain guard

catena A08 - Through an elegant design and smart technology high-quality aluminium is made to form a special product. The **catena A08** model can be used for chain wheels with up to 48 teeth (1-3 x). The chain guard also has adjustable length adjustment developed by Horn, and is therefore flexible and easy to assemble. The attachment gland is identical with the gland used in catena 05. The derailleur area is covered by a plastic trim, so that both clothing and the chain mechanics are protected.

The design of the surface allows the cycle owner's fantasy to run wild. As standard, the aluminium profile is polished with a brilliant finish. The length adapter and the trim are made from a transparent-smoke grey plastic. Depending on the design of the bike, the chain guard can also be painted in colour of the frame according to the customer's requirements.

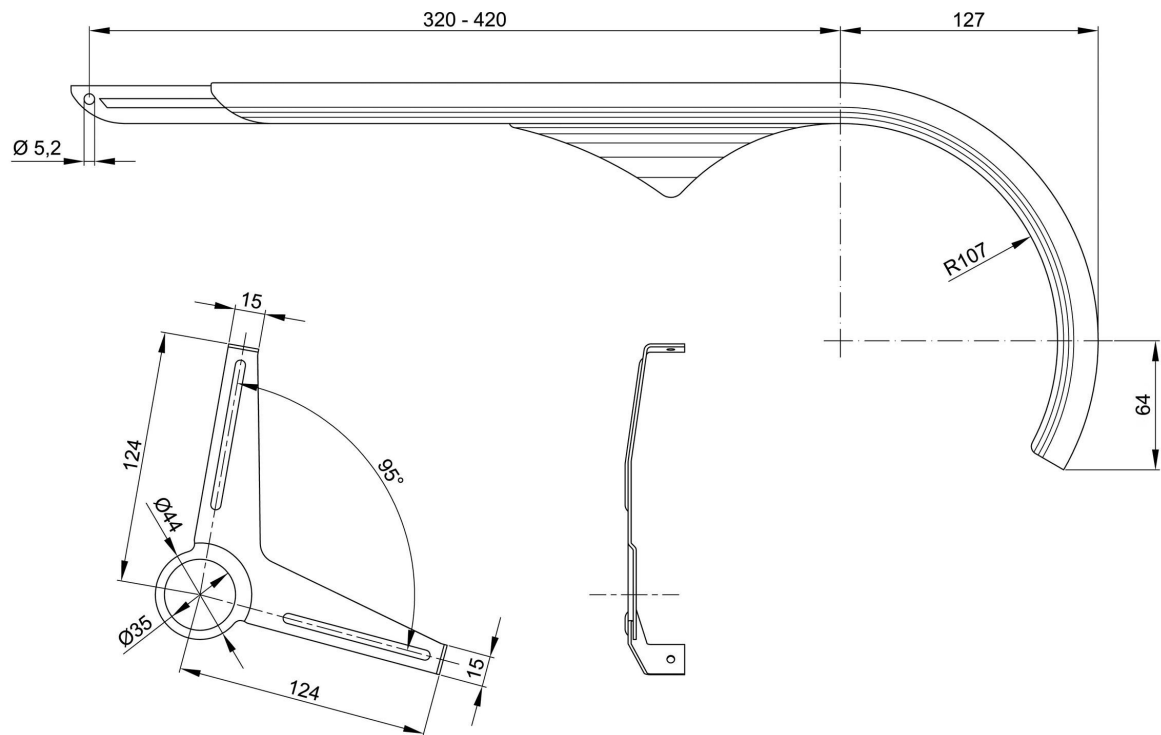

Suitable for drives:
46 - 48 teeth / 1-3 x

Mounting:
2 - point attachment (B0548)

Material:
Aluminium / ABS

catena A08

Technical Data

Assembly takes place using the 2-point attachment B0548.
The chain guard can be assembled with or without the trim.
