

Endorfy LIX Wireless (EY6A008)

The LIX Wireless weighs less than a cupcake but gives you infinitely more joy — without any of the guilt. Become faster, more accurate, and unburdened by cable clutter. Unlock your final form.

It comes armed to the metaphorical teeth with high-end components from proven manufacturers. At its center lies the ever-vigilant PixArt PAW3335 sensor, with Kailh GM 4.0 mechanical switches at the frontline of all your virtual battles. Thanks to the slick PTFE feet and the lack of a cable, it's both a blessing and a curse — you'll never so much as glance at wired mice ever again.

Mouse on speed

Virtual shooting, online ticket booking, sales hunting... We live in the age of speed, where our lives (and time) zoom past in the blink of an eye. That's why we made the LIX Wireless to be quick on its PTFE feet — so you don't have to worry about the equipment holding you back.

It's all possible thanks to the battle-proven PixArt PAW3335 sensor. Extremely precise all the way up to 16,000 DPI, it's capable of tracking your movements at a maximum speed of 10.16 m/s. It's a true racing champion at heart! But the high-tech sensor comes with other perks too — it's flexible and adapts to your playstyle. You can fine-tune its Lift-Off distance (1 or 2 mm), polling rate, and even debounce time for that extra edge against your opponents. Imagine the possibilities!

Light as a feather [honeycomb](#)

We've all experienced the wrist pain that comes with diving a little too deep into a game or a project, for a little too long. To combat this and extend your hours of fun, we worked extra hard on slimming down the LIX Wireless. And succeeded — it's only 69 g!

The breathable, "honeycomb" shell of the mouse keeps it slender, but it has other benefits too. It ensures proper air circulation, guaranteeing your hand remains sweat-free even in the heat of the moment. Additionally, the LIX Wireless is equipped with slick PTFE feet to make sure it'll slide across any mousepad effortlessly.

60 (!) million (!!!) clicks

Don't let its airy looks fool you! It's an MMA fighter at heart, with an elite commando unit of high-end components hidden inside. And it'll easily outlive even the Ultimate Evil — thanks to Kailh GM 4.0 switches.

They're universally praised for their responsiveness and durability — with a lifespan estimated at 60 million clicks, there's no such thing as "clicking too much". If you're in the market for reliable microswitches that'll last years, then place your bets on the Kailh GM.

Unleash the ~~Kraken~~ [mouse](#)!

The early bounds of your desk no longer apply — take it where your conquest takes you (including your couch). The convenience of the LIX Wireless is hard to overstate

You might instantly develop an allergy to cables. Consider yourself warned.

2.4 GHz wireless connectivity ensures a stable connection with 100% precision and 0 delays, giving you the edge in any duel. Just sit down and do your thing, wherever. All you need to do is plug the adapter (conveniently hidden in a magnetic compartment on the bottom) into your computer and voilà.

Shining, shimmering, splendid

Let's face it — LIX Wireless looks epic. Make it truly unique by customizing the ARGB backlight to match the colors of your war room.

With the LIX Wireless you can backlight the Endorfy logo, the scroll wheel, and even the strip around the back of the case. Pick your own color or use one of the predefined effects – you can also quickly change the configuration using the dedicated software.

Quick winning, quick charging

The LIX Wireless doesn't tire easily. Outfitted with a heavy-duty battery and an extremely power-efficient sensor to prolong its wireless adventures, it doesn't require your constant attention.

So you can focus on the game instead of worrying about the battery level.

When the power level drops to dangerous levels (below 25%), the scroll wheel starts flashing red. It's a sign that a quick charging session is in order. But don't worry, you can just plug in the USB-C cable and continue gaming without interruptions.

Trust your ~~guts~~ LIX's software

With LIX Wireless in your hand, you live click as you like. Thanks to the dedicated software, you have full control over the mouse and all its perks. Make your own rules — change the sensitivity or LOD, customize the ARGB backlight, and record macros.

Endorfy LIX Wireless – main features:

- RGB lighting 16.8M colours
- Ultralight design (69 g)
- PixArt PAW3335 sensor
- 16,000 maximum DPI
- Kailh GM 4.0 60M mechanical switches
- 6 programmable buttons
- "Paracord" power cable
- PTFE mouse feet
- 2 years warranty
