Mugen 3 PCGH Edition Product Specifications

M.A.P.S. (Multiple Airflow Pass-through Structure)

By introducing the newly refined M.A.P.S. (Multiple Airflow Pass-through Structure), the total cooling performance has been upgraded by optimizing the pass-through function of the airflow, and enhancing the sturdiness of the heatsink.

Introducing Dual Slip Stream 120 mm / 800 rpm

For excellent performance and extreme silence, PC Games Hardware has chosen to apply the Dual Installation of our ever popular model Slip Stream 120 mm / 800 rpm. This Dual Installation will maximize the enhanced airflow and cooling features of small axis, large blad fans, minimizing the noise level, as well as maximizing the cooling performance of Mugen 3.

F.M.S.B.4 (Flip Mount Super Back-Plate 4)

Improved Scythe original Back-Plate named F.M.S.B.4 (Flip Mount Super Back-Plate 4), the compatibility has been maximized as well as achieving the solid mounting of the cooler onto the mainboard.

Wide Range Cooling Purposes

If you require a CPU cooler to be virtually silent, or you want it for overclocking, this cooler has any angle covered!
