THE UPDATE

You know how important it is to choose the right tool for a job. But are you using the right keyboard for your livelihood? We invite you to experience the Happy Hacking Keyboard, the minimalist, Japanese cult classic developed exclusively for elite programmers and coders. It's different from mechanical and membrane keyboards; it's designed for efficiency and comfort, with only the essentials. Every keyboard function, easily accessible. Not a single unnecessary key. A unique layout that makes sense for the way you work.

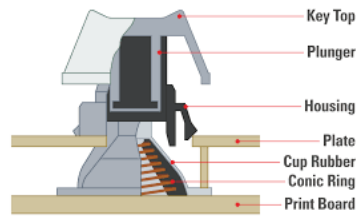

EVERYTHING YOU NEED. NOTHING YOU DON'T.

Compare the size of the HHKB to Tenkeyless and Full-Size models. HHKB is light and compact, so it easily fits in your bag. Durable, so it arrives at your destination in good working condition.

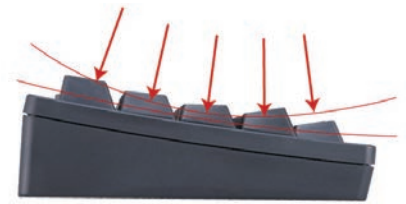

CONNECT UP TO 4 BLUETOOTH DEVICES AND SWAP BETWEEN THEM INSTANTLY.

The HYBRID Type-S and HYBRID models support both Bluetooth connection and USB connection. You can connect any device by using wireless or wired connection according to your needs. By registering up to four devices in advance, you can connect the keyboard to a device of your choice via a Bluetooth connection immediately with easy-to-use keyboard shortcuts.

GAME-CHANGING ELECTROSTATIC CAPACITIVE SWITCHES.

Best-in-class switches provide an unrivaled keying experience with extremely smooth key press and satisfying key sound. It's a difference from mechanical keyboards you'll feel and love. Our exclusive Type-S switches provide the same excellent key action with quiet sound.

COMFORT FOR THE LONGEST SESSIONS.

Designed specifically for advanced programming and coding, ideal curvature reduces hand and arm fatigue. Hands never need to leave the home row. Keys feel like they're in the right place. You're one with the machine.

CREATE YOUR OWN KEYMAPS. USE THEM ON ALL YOUR DEVICES.*

It's easy to create your own keymap with the Keymap Customization Function on HYBRID Type-S and HYBRID models. The keymap function allows you to intuitively edit keys using a Windows app and expands your personalized user experience. Keymap settings are saved in the HHKB itself so the same keymap can be used with different devices.

* Keymap software requires a USB connection to a PC running Microsoft Windows.

Professional **HYBRID** Type-S

ULTIMATE IN CONTROL AND PERFORMANCE
