

Grip Mouse

vertical ergonomic mouse

 BAKKER ELKHUIZEN

Work Smart - Feel Good

Provides a neutral position, comfortable working

The Grip Mouse changes the hand to a vertical grip keeping the hand, wrist and forearm in a more neutral position. This increases comfort and reduces the risk of injury.

The handshake position of vertical mice keeps the wrist from bending as much to the side while the forearm also turns inward to a lesser degree (Schmid, et al., 2015). This means that muscle activity in the forearm is less than it would be when using a conventional mouse (Quemelo & Vieira, 2013).
