Order Number	600600245

Logistical Data

Jonsbo NC-1 Red, RAM cooler, RGB lighting with 256 colors, anodized aluminum, 3-Pin Molex connector, red

With the NC-1, Jonsbo offers a simple and cost-effective way to turn a traditional RAM bar into a real eye-catcher for any system. The variant offered here is made of black anodized aluminum and has a lighting module with RGB LEDs on the top. The module offers an automatic color change with 256 colors. The transition between the individual colors is fluid, ensuring a multifaceted illumination of your system.

The NC-1 also serves as a heat sink for RAM bars without additional heat spreader. The NC-1 are suitable for high and low RAM modules, both single and double sided RAM. Included are thermal pads and tools to install the NC-1 on conventional RAM modules. Power is supplied via a 3-pin Molex connector.

The NC-1 are only suitable for RAM modules without additional heat spreaders. If you want to install the NC-1 on RAM with pre-installed heat spreaders, you must first remove the factory installed heatsinks. Please note that in this case you lose all warranty claims for your RAM modules. Install at your own risk.

One kit is meant for a single RAM module.
