

SENSATIONAIL®

french manicure

INSTRUCTIONS

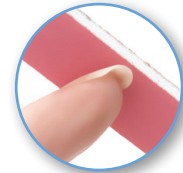

Please read and follow complete instructions, including warnings, cautions and important professional tips, before applying any gel polish products onto nails. SensatioNail® Gel Polish cures (hardens), in seconds under an LED Lamp, unlike regular polish that air dries over a long period of time. Gel requires no “dry” time.

FRENCH MANICURE APPLICATION

Prepping your nails properly will help the gel polish adhere to your nails. Find a well-ventilated, clean working space for the Gel Polish application. Do not apply outdoors or in direct sunlight as product is light sensitive. Remove any existing polish from nails then wash and thoroughly dry hands. Push back cuticles with the slanted edge of the manicure stick. It's important that the cuticle area is clean and free from debris when you apply the gel as it may stop the gel from adhering to the nail.

STEP 1 - PREPARE

(1) File and shape the free edge and lightly buff the shine off the natural nail with the pink side of the buffer. Do not over buff. Remove any remaining dust.

(2) Using the Lint Free Wipe, clean nails with Gel Cleanser and allow to air dry for 15 seconds.

(3) Apply one layer of Gel Primer sparingly to nail.

(4) For easier removal, apply sparingly in a circle, applying it to the outer edges of the nail only. Allow to air dry for 30 seconds.

TIP For best results, apply in thin precise layers. To remove excess product from the brush, when opening the bottle, circle the inside neck of the bottle with the brush. We recommend applying the gel first to both thumbs and cure them together. Then apply the gel to the other four nails on one hand and cure. Repeat the same steps on the other hand.

(5) Apply a thin layer of the Gel Base & Top Coat to the clean, dry nail without touching the cuticle or skin alongside the nails.

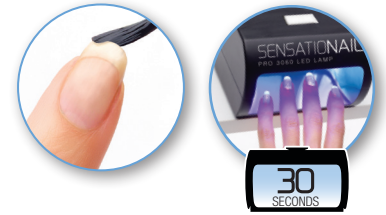

TIP The LED Lamp is programmed for 60 seconds, with a BEEP at 30 seconds for ease of curing for both time requirements.

SENSATIONAIL®

french manicure

(6) Cap the free edge of the natural nail by running the polish brush along the nail tip. If necessary, use the manicure stick to clean cuticle area before curing. Place nails into LED Lamp and cure for 30 seconds.

STEP 2 - APPLY FRENCH MANICURE

(7) Apply a thin layer of clear or sheer color gel polish. Avoid skin and cuticle. Place nails into LED Lamp and cure for 60 seconds.

(8) Remove the moisture layer using the Gel Cleanser and Lint-free wipes.

OPTION 1

(9) To create a French Manicure using white gel polish: Apply a thin, even layer of white gel polish to tip of nail to create the white tip. Place nails into LED Lamp and cure for 60 seconds. For a more opaque tip, apply an additional coat of white gel polish and cure for 60 seconds.

OPTION 2

(10) To apply French Manicure stickers: Select the appropriate size French Manicure Tip for your nail. Remove tip from the clear sheet and place on nail. Press tip firmly on to nail.

(11) File tip in downward direction to size.

STEP 3 - PROTECT

(12) Apply a thin layer of the Gel Base & Top Coat. Make sure the gel does not touch the cuticle or skin alongside the nails. Cap the free edge of the nail by running the brush along the nail tip. If necessary, use the manicure stick to clean cuticle area before curing. Place nails into LED Lamp and cure for 60 seconds. For added protection apply another coat of gel base and top and cure for 60 seconds.

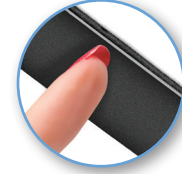

(13) Remove the moisture layer using the Gel Cleanser and Lint-Free Wipes.

GEL POLISH REMOVAL

(14) Buff the shine off the surface of the nails with the grey side of the buffer.

(15) Use the SensatioNail® Gel Polish Removal Wraps. Saturate the pad on the foil with SensatioNail® Gel Polish Remover. Wrap the foil tightly around your finger to lock in the natural heat. Allow 10 to 15 minutes for the Gel Polish Remover to lift the gel polish off the nail.

(16) Remove wraps. Use the SensatioNail® Gel Polish Removal Tool to gently take the remaining gel polish off the nails. To remove any residue for a healthy finish, gently buff your natural nails with the pink side of the buffer.

GEL POLISH STORAGE

This product is light sensitive. Store the gel polish in a dark place or a drawer. Do not put in refrigerator. Keep at room temperature.

SENSITIVITY TEST

Prior to product use, we recommend that you test the product for at least 48 hours on one nail for any sensitivity issues. If any irritation or discomfort occurs, discontinue use immediately. **WARNINGS:** For external use only. Keep out of reach of small children. Avoid eye and skin contact. In case of eye contact or if swallowed, seek medical advice immediately and show this container or label. In case of contact with eyes, rinse immediately with plenty of water. Cleanser, Primer & White Tips: Highly flammable.

LED LAMP WARNING

- Voltage: 220-240V/50Hz
- Keep out of reach of children
- Avoid contact with water
- Designed for LED gel curing only, not any other use
- Unplug LED Lamp when not in use
- Do not leave LED Lamp unattended
- Do not touch bulb when LED Lamp is powered on
- Keep gel components away from LED Lamp to prevent hardening of content
- Do not look into the light directly

LED OPERATING INSTRUCTIONS
