Ninja 4 Product Specifications

T-M.A.P.S (Three-dimensional Multiple Airflow Pass-through Structure)

By introducing our new T-M.A.P.S technology for the Ninja 4, we were able to increase the cooling capacity compared to previous models based on the older M.A.P.S lamellar structure.

The clever arrangement of the cooling fins allows the usage of an additional pair of fins without suffering negative effects to weight or height of the heatsink and optimizes the cooling power in the lower speed range of the supplied fan.

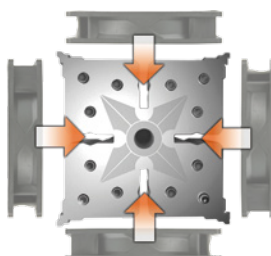

GlideStream 120 PWM FAN

The enclosed 120mm fan comes from the GlideStream PWM series. This new model offers the ability to adjust the maximum fan speed in 3 settings via a slide switch, allowing the user to choose between extremely silent operation or maximum cooling power.

Flexible Fan Mounting

Inspired by his predecessors, the Ninja 4 offers the option to install the fan on all four sides of the heatsink. This allows for very effective integration into air flow of the case. To further increase the performance, a second fan* can be installed by using the included additional pair of fan clips.

*extra fan must be purchased separately
